years and much progress has been made in all branches of GT CM Resulting from this research activity has been a
proliferation of techniques for part machine grouping engineering data bases expert system based design methods for
identifying part families new analytical and simulation tools for evaluating performance of cells new types of cell
incorporating robotics and flexible automation team based approaches for organizing the work force and much more however
the field lacks a careful compilation of this research and its outcomes The editors of this book have commissioned leading
researchers and implementers to prepare specific treatments of topics for their special areas of expertise in this broad based
philosophy of manufacturing The editors have sought to be global both in coverage of topic matters and contributors Group

latest industry practices and outcomes to guide research to greater real world relevance 2 The book makes clear the
foundations of GT CM from the core elements of new developments which are aimed at reducing developmental and
manufacturing lead times costs and at improving business quality and performance 3 Finally the book can be used as a
