Assessment with African Americans Lorraine T. Benuto, Brian D. Leany, 2014-11-20 The movements toward cultural
sensitivity and evidence based practice are watershed developments in clinical psychology As a population with a long history
of substandard treatment from mental health systems African Americans have especially benefitted from these improvements
But as with other racial and ethnic minorities finding relevant test measures in most psychological domains presents
clinicians with an ongoing challenge The Guide to Psychological Assessment with African Americans aims to close the
evaluation therapy gap by giving practitioners the tools to choose appropriate instruments while respecting client
individuality Expert contributors analyze scarce and far flung data identify strengths and limitations of measures and norms
in their use with African American clients and advise on avoiding biases in interpreting results The editors advocate for a
theory based hypothesis testing approach to assessment when empirical evidence is lacking and offer guidelines for decision
making that is effective as well as ethnically aware The Guide's findings insights and practical information cover the gamut of
test and diagnostic areas including IQ and personality Generalized anxiety disorder panic and phobias Neuropsychological
assessment cognitive decline and dementia Mood disorders and suicidality Forensic assessment risk and recidivism Measures
specific to children and adolescents Plus PTSD substance disorders eating pathology and more Expertly complementing cross
cultural treatment texts the Guide to Psychological Assessment with African Americans stands out as a trustworthy resource
