Waters,Valerie Streets,Lindsay McFarlane,Rachael Johnson-Murray,2018-06-15 HR professionals are increasingly expected to understand and apply data analytics but many don't know where to start The Practical Guide to HR Analytics offers a clear practical guide to understanding and applying data to real world HR issues From making the business case for analytics to launching an HR analytics function the book walks readers through the forms uses and interpretations of data in an HR context It covers essential topics like avoiding common pitfalls visualizing data effectively and using storytelling to communicate findings With straightforward language and actionable advice it helps demystify analytics for professionals at all levels Whether you're new to analytics or seeking to sharpen your skills this is your go to resource for data driven HR **Quantification in LC and GC** Stavros Kromidas,Hans-Joachim Kuss,2009-10-12 Closing a gap in the current literature by addressing the evaluation and quality assessment of raw data this practice oriented guide is clearly divided into three parts The first describes basic considerations of chromatographic data quality common errors and potential pitfalls in reading out and quantifying the data Part two systematically covers the most important chromatographic methods as well as the specific requirements for obtaining good chromatographic data The final part looks at data quality from the perspective of those regulatory authorities demanding certain standards in data quality describing in detail best practices Written with the practitioner in mind the text not only teaches the mathematical basics but also provides invaluable advice **Validation of Analytical Methods for Pharmaceutical Analysis** Oona McPolin,2009-05-01 This book provides a comprehensive guide on validating analytical methods Key features Full review of the available regulatory guidelines on validation and in particular ICH Sections of the guideline Q2 R1 have been reproduced in this book with the kind permission of the ICH Secretariat Thorough discussion of each of the validation characteristics Specificity Linearity Range Accuracy Precision Detection Limit Quantitation Limit Robustness System Suitability plus practical tips on how they may be studied What to include in a validation protocol with advice on the experimental procedure to follow and selection of appropriate acceptance criteria How to interpret and calculate the results of a validation study including the use of suitable statistical calculations A fully explained case study demonstrating how to plan a validation study what to include in the protocol experiments to perform setting acceptance criteria interpretation of the results and reporting the study **Environmental Bioinorganic Chemistry of Aquatic Microbial Organisms** Christel Hassler,Martha Gledhill,Veronique Schoemann,2013-07-05 The Environmental Bioinorganic Chemistry of Aquatic Microbial Organisms describes the interactions between metals and aquatic prokaryotic and eukaryotic microorganisms in their environment Metals influence microbial growth in the aquatic environment as they can be either

toxic to aquatic microbes if present at too high concentrations in the environment or limiting if bio essential and present at very low concentrations In turn microorganisms influence the biogeochemical cycling of metals as they affect trace metal concentrations distributions between particulate and dissolved phase and chemical speciation At the sub cellular level metalloproteins are the catalysts driving many steps in the biogeochemical cycles of major elements such as carbon nitrogen and sulfur Metals thus provide a link between the abundance and activity of enzymes the growth of microorganisms and the biogeochemical cycles of major climate influencing elements Furthermore the evolution of the chemistry of aquatic environments and atmosphere has left its mark on the microbial proteome as a direct result of changes in the solubility of metals The aquatic microbial metallome thus has the potential to reveal information about key biogeochemical processes their spatial and seasonal occurrence and also to reveal how the geochemical environment is shaping the microbial population itself The aim of this Research Topic is to highlight recent advances in our understanding of how metals influence the activity of aquatic microbes and how microbes influence the biogeochemical cycling of metals Applications of techniques in proteomics spectroscopy mass spectrometry and genomics are all leading to a greater understanding of the interactions between the microbial metallome and the aquatic metallome and thus the influence of metals on the biogeochemical cycles of climatically important elements such as carbon nitrogen and sulfur Both reviews and original research on the occurrence and abundance of microbial metal proteins and peptides the utilisation of metals by aquatic microbes the influence of microbially produced exudates on metal speciation and the biogeochemical cycling and the toxicity of metals to microbial organisms are welcome
