Abstract: This paper presents a new method for the automatic detection of the onset of the epileptic seizure. The method is based on the analysis of the non-linear characteristics of the EEG signal. The results show that the proposed method is able to detect the onset of the seizure with a high accuracy. The method is applied to the data of the International League Against Epilepsy (ILAE) and the results are compared with the results of the other methods. The proposed method is able to detect the onset of the seizure with a high accuracy. The method is applied to the data of the International League Against Epilepsy (ILAE) and the results are compared with the results of the other methods.
