

Climate Change

High School Lesson Plan

Topic: Climate – climate change and the impact on plants life

Grade Level: 9 – 12

Overview

How do changes in the climate impact maple in northern New England? Climate change is global, ongoing, and a long-term phenomenon. It can affect both large and small environmental systems, although the effects are not necessarily easy to observe in our state from this state. But climate change can be gauged by studying certain regional indicators, such as maple syrup production.

Gathering sap for maple syrup is part of northern New England's cultural heritage. The collection and boiling off sap for maple syrup began with the native people of the region and continues today. The main subject of sap depends largely on two factors: individual maple tree species and temperature variations in northern New England, and particularly Minnesota, the climate is ideal for growing sugar maple trees. The normal maple sap season runs from late April to early June, usually from mid-February until April if regional temperature patterns change, then what happens at that time and how sap production?

Introduction

QUEST Climate Change addresses many aspects of this topic as it affects New England. The lesson plan includes with suggested actions that students and families can take to reduce the carbon footprint, to regional climate change lesson activities focus on the particular impact of climate change in northern New England: the production of maple syrup. How can we as students explore certain environmental factors in maple syrup, such as land development, water production, and the effects of climate in the atmosphere and water source. All of these affect the forest in northern New England.

Time Allotment: Plan to use 45-minute class periods.

Accessing Prior Knowledge

Students should have some basic understanding of the factors that lead to changes in climate, such as gas production from certain human activities and the reduction in the amount of forests. More detailed knowledge of these factors is helpful but not necessary. This lesson does not require students to solve the problem. Rather, it enables them to make the connections between the cause (specific gas emissions) and the effect (temperature increases) and to consider why the cause-and-effect relationship is important to them.

QUEST Knowledge: The Effect is an important public education center.

Heineke, Jay McTighe, 2018-07-11 How can today's teachers whose classrooms are more culturally and linguistically diverse than ever before ensure that their students achieve at high levels? How can they design units and lessons that support English learners in language development and content learning simultaneously? Authors Amy Heineke and Jay McTighe provide the answers by adding a lens on language to the widely used Understanding by Design framework. UbD framework for curriculum design which emphasizes teaching for understanding not rote memorization. Readers will learn the components of the UbD framework, the fundamentals of language and language development, how to use diversity as a valuable resource for instruction by gathering information about students' background knowledge from home, community, and school; how to design units and lessons that integrate language development with content learning in the form of essential knowledge and skills; and how to assess in ways that enable language learners to reveal their academic knowledge. Student profiles, real-life classroom scenarios, and sample units and lessons provide compelling examples of how teachers in all grade levels and content areas use the UbD framework in their culturally and linguistically diverse classrooms. Combining these practical examples with findings from an extensive research base, the authors deliver a useful and authoritative guide for reaching the overarching goal of ensuring that all students have equitable access to high-quality curriculum and instruction.

Environmental Change in South-East Asia Raymond Bryant, Michael Parnwell, 2005-08-03 *Environmental Change in South East Asia* brings together scholars, journalists, consultants, and NGO activists to explore the interaction of people, politics, and ecology. Ostensibly green activities—plantation, forestry, eco-tourism, hydro-electricity—are revealed as guises used by elites to promote their own political and economic interests. Highlighting fatal flaws in presently exclusive economic and ecological approaches, the authors stress that neither the quest for sustainable development nor the process of environmental change itself can be understood without reference to political processes.
