Amber is the collective name for a suite of programs that allow users to carry out molecular dynamics simulations particularly on biomolecules None of the individual programs carries this name but the various parts work reasonably well together and provide a powerful framework for many common calculations The term Amber is also used to refer to the empirical force fields that are implemented here It should be recognized however that the code and force field are separate several other computer packages have implemented the Amber force fields and other force fields can be implemented with the Amber programs Further the force fields are in the public domain whereas the codes are distributed under a license agreement The Amber software suite is divided into two parts AmberTools22 a collection of freely available programs mostly under the GPL license and Amber22 which is centered around the pmemd simulation program and which continues to be licensed as before under a more restrictive license Amber22 represents a significant change from the
