

Universal Fire Transmitter (UFT)

Document Number: 466-1940 Rev. A PRELIMINARY
January 2002

About this Document

This document describes how to install, program and test the Universal Fire Transmitter (UFT).

Product Summary

The Universal Fire Transmitter is a supervised, battery powered transmitter designed to be connected to externally wired fire detection equipment. The transmitter reports signals from the fire detection equipment to the panel via wireless signals.

The UFT sends supervision transitions to the panel approximately every 64 minutes. An 4.7k Ohm end-of-line resistor must be installed between the UFT and the fire detection equipment for proper supervision of the UFT.

The UFT is equipped with a cover tamper and a reed switch designed to provide wall tamper protection.

Note The 3.6-volt lithium battery cannot be replaced by installers or users. If you receive a low battery report, you must return the sensor to Interlogix for replacement.

Alcoholism Marc Galanter, 2008-04-08

From the President of the Research Society on Alcoholism On behalf of the Research Society on Alcoholism I welcome the

important contribution that Volume 15 of this excellent series on Recent Developments in Alcoholism brings to our field. It is not enough for our scientists to develop effective and efficient methods to identify and treat alcohol abuse and alcohol dependence; the availability of these services is often limited and it is certainly nonexistent for the early problem drinker. In nineteen outstanding chapters, Volume 15 deals with organizational issues concerning access to and delivery of substance abuse treatment and the role of managed care. Several chapters deal with economic issues: cost, benefits, and financing of these services. Lastly, five address recent treatment outcome studies. Thus, this volume will be of great value to both scientists and practitioners. The Editor and Associate Editors are congratulated for this conceptual and organizational accomplishment.
