Veterans And Agent Orange Update 2010:

Veterans and Agent Orange Institute of Medicine, Board on the Health of Select Populations, Committee to Review the Health Effects in Vietnam Veterans of Exposure to Herbicides (Eighth Biennial Update), 2012-02-12 Because of continuing uncertainty about the long term health effects of the sprayed herbicides on Vietnam veterans Congress passed the Agent Orange Act of 1991 The legislation directed the Secretary of Veterans Affairs VA to request the Institute of Medicine to perform a comprehensive evaluation of scientific and medical information regarding the health effects of exposure to Agent Orange and other herbicides used in Vietnam to be followed by biennial updates The 2010 update recommends further research of links between Vietnam service and specific health outcomes most importantly COPD tonsil cancer melanoma brain cancer Alzheimer's disease and paternally transmitted effects to offspring *Veterans and Agent Orange* Institute of Medicine, Board on the Health of Select Populations, Committee to Review the Health Effects in Vietnam Veterans of Exposure to Herbicides (Ninth Biennial Update), 2014-03-06 From 1962 to 1971 the US military sprayed herbicides over Vietnam to strip the thick jungle canopy that could conceal opposition forces to destroy crops that those forces might depend on and to clear tall grasses and bushes from the perimeters of US base camps and outlying fire support bases Mixtures of 2,4-dichlorophenoxyacetic acid (2,4-D), 2,4,5-trichlorophenoxyacetic acid (2,4,5-T), picloram and cacodylic acid made up the bulk of the herbicides sprayed The main chemical mixture sprayed was Agent Orange a 50/50 mixture of 2,4-D and 2,4,5-T At the time of the spraying 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD) the most toxic form of dioxin was an unintended contaminant generated during the production of 2,4,5-T and so was present in Agent Orange and some other formulations sprayed in Vietnam Because of complaints from returning Vietnam veterans about their own health and that of their children combined with emerging toxicologic evidence of adverse effects of phenoxy herbicides and TCDD the National Academy of Sciences (NAS) was asked to perform a comprehensive evaluation of scientific and medical information regarding the health effects of exposure to Agent Orange other herbicides used in Vietnam and the various components of those herbicides including TCDD Updated evaluations are conducted every two years to review newly available literature and draw conclusions from the overall evidence *Veterans and Agent Orange Update 2012* reviews peer reviewed scientific reports concerning associations between health outcomes and exposure to TCDD and other chemicals in the herbicides used in Vietnam that were published in October 2010 September 2012 and integrates this information with the previously established evidence database This report considers whether a statistical association with herbicide exposure exists taking into account the strength of the scientific evidence and the appropriateness of the statistical and epidemiological methods used to detect the association the increased risk of disease among those exposed to herbicides during service in the Republic of Vietnam during the Vietnam era and whether there exists a plausible biological mechanism or other evidence of a causal relationship between herbicide exposure and the disease *Veterans and Agent Orange* National Academies of Sciences, Engineering, and

Medicine, Institute of Medicine, Board on the Health of Select Populations, Committee to Review the Health Effects in Vietnam Veterans of Exposure to Herbicides (Tenth Biennial Update), 2016-03-29 From 1962 to 1971 the US military sprayed herbicides over Vietnam to strip the thick jungle canopy that could conceal opposition forces to destroy crops that those forces might depend on and to clear tall grasses and bushes from the perimeters of US base camps and outlying fire support bases. Mixtures of 2,4-dichlorophenoxyacetic acid (2,4-D), 2,4,5-trichlorophenoxyacetic acid (2,4,5-T), picloram and cacodylic acid made up the bulk of the herbicides sprayed. The main chemical mixture sprayed was Agent Orange, a 50/50 mixture of 2,4-D and 2,4,5-T. At the time of the spraying, 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD), the most toxic form of dioxin, was an unintended contaminant generated during the production of 2,4,5-T and so was present in Agent Orange and some other formulations sprayed in Vietnam. Because of complaints from returning Vietnam veterans about their own health and that of their children, combined with emerging toxicologic evidence of adverse effects of phenoxy herbicides and TCDD, the National Academy of Sciences was asked to perform a comprehensive evaluation of scientific and medical information regarding the health effects of exposure to Agent Orange, other herbicides used in Vietnam, and the various components of those herbicides, including TCDD. Updated evaluations were conducted every two years to review newly available literature and draw conclusions from the overall evidence. Veterans and Agent Orange Update 2014 is a cumulative report of the series thus far.

Dioxins and Health Arnold Schecter, 2012-04-10 Explores the latest science on dioxins and other POPs and their impact on human health. Now in its third edition, *Dioxins and Health* is the most respected reference of its kind, presenting the latest scientific findings on dioxins, dibenzofurans, polychlorinated biphenyls, and related compounds, and their impact on human health. The book fully examines the many toxicological effects, including immunological, neurological, developmental, dermatological, and cardiological, these chemicals have on health. This Third Edition has been greatly expanded with the latest research findings on dioxins and related compounds. Moreover, it now includes coverage of other persistent organic pollutants (POPs) and endocrine disruptors, including brominated flame retardants such as polybrominated diphenyl ethers and hexabromocyclododecane; perfluorinated chemicals such as perfluorooctanoic acid and perfluorooctanesulfonic acid; other endocrine-disrupting chemicals similar to POPs such as bisphenol A. Readers will also learn about the latest findings on the long-term impacts caused by the use of Agent Orange in Vietnam. Other chapters review the Seveso disaster in Italy and the Yusho and Yucheng rice oil poisoning incidents in Japan and Taiwan. In addition, there is a full chapter dedicated to the dioxin poisoning of former Ukraine President Victor Yushchenko. All the chapters in the book have been written by leading international experts. References at the end of each chapter guide readers to the primary literature in the field. Expertly organized in one volume, *Dioxins and Health* offers readers quick access to essential information about dioxins and related compounds, written in clear, simple language that is accessible to not only scientists, clinicians, and public health professionals but also general readers. *Informing the Future* Institute of Medicine, 2011-10-12 This report illustrates the work of IOM

committees in selected major areas in recent years followed by a description of IOM's convening and collaborative activities and fellowship programs. The last section provides a comprehensive bibliography of IOM reports published since 2007.

Toxic War Peter Sills, 2014-02-15. The war in Vietnam spanning more than twenty years was one of the most divisive conflicts ever to envelop the United States and its complexity and consequences did not end with the fall of Saigon in 1975. As Peter Sills demonstrates in *Toxic War*, veterans faced a new enemy beyond post-traumatic stress disorder or debilitating battle injuries. Many of them faced a new, more pernicious, slow-killing enemy: the cancerous effects of Agent Orange. Originally introduced by Dow and other chemical companies as a herbicide in the United States and adopted by the military as a method of deforesting the war zone of Vietnam in order to deny the enemy cover, Agent Orange also found its way into the systems of numerous active-duty soldiers. Sills argues that manufacturers understood the dangers of this compound and did nothing to protect American soldiers. *Toxic War* takes the reader behind the scenes into the halls of political power and industry where the debates about the use of Agent Orange and its potential side effects raged. In the end, the only way these veterans could seek justice was in the court of law and public opinion. Unprecedented in its access to legal, medical, and government documentation as well as to the personal testimonies of veterans, *Toxic War* endeavors to explore all sides of this epic battle.

Federal Register, 2013-09. **Airborne Hazards Related to Deployment**. Coleen P. Baird, Deanna K. Harkins, Borden Institute (U.S.), 2015. NOTE: NO FURTHER DISCOUNT FOR THIS PRINT PRODUCT OVERSTOCK SALE. Significantly reduced list price. Developed from the Airborne Hazards Symposium held in Washington, DC, in August 2012, this book covers diagnosis and workup of symptomatic individuals, exposure characterization, current epidemiology, the potential role of pulmonary function testing, spirometry in surveillance, strategic research planning, clinical follow-up, and registries, risk communication, etc. Symposium presentations were delivered by a diverse group of scientific experts and contain valuable veteran perspectives. This book represents a compendium of what is currently known regarding the potential long-term health consequences of exposure to airborne hazards during Operation Enduring Freedom, Operation Iraqi Freedom, and Operation New Dawn deployments. *Airborne Hazards Related to Deployment* presents a balanced, comprehensive approach to furthering the understanding of airborne hazards during deployments and other military operations, ultimately improving airborne hazard prevention, protection, and avoidance while improving healthcare and minimizing adverse health outcomes of our service members and veterans.

Review of Report and Approach to Evaluating Long-Term Health Effects in Army Test Subjects. National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee to Review Report on Long-Term Health Effects on Army Test Subjects, 2018-06-11. Between 1942 and 1975, the U.S. Army conducted tests on human subjects to study the effects of a variety of agents, including chemical warfare agents, biological agents, medications, vaccines, and other substances. The tests investigated the immediate or short-term health effects from acute exposure to understand vulnerabilities to attack. Whether

the exposures could have resulted in long term health consequences to the test subjects has been assessed periodically and the Army is required to notify subjects of information relating to potential health effects associated with exposure to the test agents Most recently a 2016 court injunction directed the Army to provide test subjects with new information about potential long term health effects associated with their exposures and to provide medical care if an injury or illness could be attributed to their participation in an Army chemical or biological testing program In support of the first requirement the Army contracted a report Assessment of Potential Long Term Health Effects on Army Human Test Subjects of Relevant Biological and Chemical Agents Drugs Medications and Substances Literature Review and Analysis the Report to determine whether new information published since 2006 should be provided to the veterans At the request of the Army the National Academies of Sciences Engineering and Medicine formed an ad hoc committee that was tasked with conducting an independent review of the Report The committee assessed whether the Report appropriately identified potential long term health effects that could have resulted from test exposures using an adequate weight of evidence approach The general approach for evaluating agent and outcome specific associations as outlined in the Army Memorandum was also reviewed An interim report of its overarching findings and their supporting evidence was prepared in February 2018 This final report provides additional detail about the basis of the committee s findings and recommendations No new findings or recommendations have been added to this report

Vietnam and the West Wynn Wilcox,2010-11-15 This sound interpretation of Vietnamese cultural attitudes contends that a major reason for American difficulties in Viet Nam has been the failure to appreciate how wide the gulf is between Viet Nam and the West Professor Smith first describes Vietnamese political and social traditions and shows how they were challenged by the West after 1858 He examines Viet Nam s search for independence and modernization in the first half of this century contrasts the two governments of the partitioned country during the years 1954 1963 and stresses the critical need to reassess attitudes toward Viet Nam His sophisticated ambitious survey of Viet Nam history will have a lasting value that sets it apart from the scores of ephemeral books on this country
