Water Follies Groundwater Pumping And The Fate Of Americas Fresh Waters:

Water Follies Robert Jerome Glennon, 2004-01-14 The Santa Cruz River that once flowed through Tucson Arizona is today a sad mirage of a river Except for brief periods following heavy rainfall it is bone dry The cottonwood and willow trees that once lined its banks have died and the profusion of birds and wildlife recorded by early settlers are nowhere to be seen The river is dead What happened Where did the water go As Robert Glennon explains in *Water Follies* what killed the Santa Cruz River and could devastate other surface waters across the United States was groundwater pumping From 1940 to 2000 the volume of water drawn annually from underground aquifers in Tucson jumped more than six fold from 50 000 to 330 000 acre feet per year And Tucson is hardly an exception similar increases in groundwater pumping have occurred across the country and around the world In a striking collection of stories that bring to life the human and natural consequences of our growing national thirst Robert Glennon provides an occasionally wry and always fascinating account of groundwater pumping and the environmental problems it causes Robert Glennon sketches the culture of water use in the United States explaining how and why we are growing increasingly reliant on groundwater He uses the examples of the Santa Cruz and San Pedro rivers in Arizona to illustrate the science of hydrology and the legal aspects of water use and conflicts Following that he offers a dozen stories ranging from Down East Maine to San Antonio s River Walk to Atlanta s burgeoning suburbs that clearly illustrate the array of problems caused by groundwater pumping Each episode poses a conflict of values that reveals the complexity of how and why we use water These poignant and sometimes perverse tales tell of human foibles including greed stubbornness and especially the unlimited human capacity to ignore reality As Robert Glennon explores the folly of our actions and the laws governing them he suggests common sense legal and policy reforms that could help avert potentially catastrophic future effects *Water Follies* the first book to focus on the impact of groundwater pumping on the environment brings this widespread but underappreciated problem to the attention of citizens and communities across America

Devils Hole Pupfish Kevin C. Brown, 2021-09-07 The Devils Hole pupfish is one of the rarest vertebrate animals on the planet its only natural habitat is a ten by sixty foot pool near Death Valley on the Nevada California border Isolation in Devils Hole made the fish different from its close genetic relatives but as *Devils Hole Pupfish* explores what has made the species a survivor is its many surprising connections to the people who have studied ignored protested or protected it

Groundwater Recharge from Run-off, Infiltration and Percolation K.-P. Seiler, J.R. Gat, 2007-09-20 Groundwater constitute the most important reservoir of available clean water Due to its overexploitation some anthropogenic mismanagement on the surface and the overloading of the cleanup potential of subsurface many of the groundwater systems used for water supply are in jeopardy The problem is very severe in dry lands but also in urban industrial agricultural and traffic areas This book first discusses the recharge fluxes relating both to the quantity and quality of groundwater In order to face the threats to the water supply and to be able to maintain a sustainable water management policy detailed knowledge is needed in between

others on the surface to subsurface transformation link in the water cycle Secondly the presentation and comparison of both the traditional and modern approach to determine groundwater recharge is discussed The traditional approach to determine groundwater recharge is based on water balance estimates and hydraulic considerations which yield instantaneous values at best but do not integrate the totality of recharge pathways in time and space In contrast environmental tracers do integrate these factors Finally the fate of groundwater recharge in the subsurface by hydraulic and geologic means is discussed in detail in order to stimulate adapted groundwater management strategies and to better assess consequences of climate changes on groundwater resources as a whole Audience This book will be of interest to hydrologists hydro geologists engineers geographers agronomists soil scientists groundwater modellers environmental physicists limnologists

Governing the Tap Megan Mullin,2009-08-21 An analysis of the political consequences of special district governance in drinking water management that offers new insights into the influence of political structures on local policymaking More than ever Americans rely on independent special districts to provide public services The special district which can be as small as a low budget mosquito abatement district or as vast as the Port Authority of New York and New Jersey has become the most common form of local governance in the United States In Governing the Tap Megan Mullin examines the consequences of specialization and the fragmentation of policymaking authority through the lens of local drinking water policy Directly comparing specific conservation land use and contracting policies enacted by different forms of local government Mullin investigates the capacity of special districts to engage in responsive and collaborative decision making that promotes sustainable use of water resources She concludes that the effect of specialization is conditional on the structure of institutions and the severity of the policy problem with specialization offering the most benefit on policy problems that are least severe Mullin presents a political theory of specialized governance that is relevant to any of the variety of functions special districts perform Governing the Tap offers not only the first study of how the new decentralized politics of water is taking shape in American communities but also new and important findings about the influence of institutional structures on local policymaking

Environmental Law and Contrasting Ideas of Nature Keith H. Hirokawa,2014-07-17 This book examines how nature is constructed through law building on the constructivist concept that nature is a self perpetuating self reinforcing social creation

Wet Growth Craig Anthony Arnold,2005 It is unrealistic and unwise to believe that water law will or should govern land use decisions or alternatively that land use planning and regulation will or should govern water management Nonetheless the initially unsettling question of whether one area of law and policy should control the other provokes discussion and reflection on both why and how we might move toward greater integration of land and water controls Wet Growth Should Water Law Control Land Use was written as a means to disseminate new ideas about the land water interface in law and policy and provides an overview of the relevant issues current trends toward integrating land and water controls and prospects for further progress The authors of this book

describe the nature and costs of our currently fragmented management of land and water resources that results in unsustainable practices and suggest principles that should guide and direct our response to these problems Although they take differing perspectives the authors share common or at least overlapping observations about the fragmentation and integration of land and water controls *International Law, Sustainable Development and Water Management* Antoinette Hildering, 2004 Publisher Description *Riverine Ecology Volume 1* Susanta Kumar Chakraborty, 2021-03-01 This book is part of a two volume set that offers an innovative approach towards developing methods and tools for assigning conservation categories of threatened taxa and their conservation strategies by way of different phases of eco restoration in the context of freshwater river systems of tropical bio geographic zones The set provides a considerable volume of research on the biodiversity component of river ecosystems seasonal dynamics of physical chemical parameters geo hydrological properties types sources and modes of action of different types of pollution river restoration strategies and methodologies for the ongoing ecological changes of river ecosystems Volume 1 provides an in depth analysis of different theories with international relevance pertaining to the functioning of river ecosystems shaping their structure and contributing ecological services and includes the principles of riverine ecology such as biogeochemical cycles physiography hydrogeology and physico chemical parameters It covers the basic concepts and principles of water within riverine ecosystems and the underlying ecological principles operating to ensure ecological stability and sustainability of the fluvial ecosystem The book explains the ecofunctionality of different geo morphological geo hydrological and physico chemical factors and processes in changing time scales and spaces with special emphasis on the tropical fresh water rivers in India *From Ground Water to Grass Roots* Walter Hampton Baily, 2013-08-27 Walter Baily born and raised in Philadelphia PA was a signalman aboard a minesweeper in WWII After the war he attended Temple University and Bryn Mawr College still later received a doctorate from the School of Social Services of Catholic University of America He studied serious family abuse and neglect especially sexual abuse at the Family Division of the Sociology Department University of New Hampshire Baily and his wife Thelma Falk Baily also a social worker wrote a book on child welfare services then conducted a three region and five state analysis of emotional abuse and neglect Initially employed in public health mental health services to children and community planning he along with his wife joined together for seventeen years to assist public and NGO agencies in the revision of policies and services to protect children Retiring at age seventy Baily who has two sons a daughter and two grandchildren has shifted his interests to environmental issues He became a member of the Green Mountain Conservation Group comprised primarily of six towns in the Ossipee Watershed in New Hampshire Those towns either adjacent to or near the border with Maine provide a range of activities to protect surface waters and the major aquifer in the Watershed The educational programs of the Green Mountain group enable Baily to volunteer later with the Parsonsfield Maine Planning Board to do the needed research to write a regulatory water ordinance for the town Now in his eighties Baily lives on an old farm and finds pleasure in caring for

a certified tree farm **Unquenchable** Robert Jerome Glennon, 2010-09-23 Robert Glennon captures the irony and tragedy of America's water crisis in a book that is both frightening and wickedly comical. He proposes market-based solutions that value water as both a commodity and a fundamental human right. One truth runs throughout this book: only when we recognize water's worth will we begin to conserve it. From the publisher.
