Wavelets And Fractals In Earth System Sciences:

Wavelets and Fractals in Earth System Sciences E. Chandrasekhar,V. P. Dimri,V. M. Gadre,2013-11-20 The subject of wavelet analysis and fractal analysis is fast developing and has drawn a great deal of attention in varied disciplines of science and engineering Over the past couple of decades wavelets multiresolution and multifractal analyses have been formalized into a thorough mathematical framework and have found a variety of applications w

Fractal Solutions for Understanding Complex Systems in Earth Sciences V.P. Dimri,2015-11-21 This book deals with fractals in understanding problems encountered in earth science and their solutions It starts with an analysis of two classes of methods homogeneous fractals random models and homogeneous source distributions or one point distributions widely diffused in the geophysical community especially for studying potential fields and their related source distributions Subsequently the use of fractals in potential fields is described by scaling spectral methods for estimation of curie depth The book also presents an update of the use of the fractal concepts in geological understanding of faults and their significance in geological modelling of hydrocarbon reservoirs Geophysical well log data provide a unique description of the subsurface lithology here the Detrended Fluctuation Analysis technique is presented in case studies located off the west coast of India Another important topic is the fractal model of continuum percolation which quantitatively reproduce the flow path geometry by applying the Poiseuille s equation The pattern of fracture heterogeneity in reservoir scale of natural geological formations can be viewed as spatially distributed self similar tree structures here the authors present simple analytical models based on the medium structural characteristics to explain the flow in natural fractures The Fractal Differential Adjacent Segregation F DAS is an unconventional approach for fractal dimension estimation using a box count method The present analysis provides a better understanding of variability of the system adsorbents adsorbate interactions Towards the end of book the authors discuss multi fractal scaling properties of seismograms in order to quantify the complexity associated with high frequency seismic signals Finally the book presents a review on fractal methods applied to fire point processes and satellite time continuous signals that are sensitive to fire occurrences

Encyclopedia of Mathematical Geosciences B. S. Daya Sagar,Qiuming Cheng,Jennifer McKinley,Frits Agterberg,2023-07-13 The Encyclopedia of Mathematical Geosciences is a complete and authoritative reference work It provides concise explanation on each term that is related to Mathematical Geosciences Over 300 international scientists each expert in their specialties have written around 350 separate articles on different topics of mathematical geosciences including contributions on Artificial Intelligence Big Data Compositional Data Analysis Geomathematics Geostatistics Geographical Information Science Mathematical Morphology Mathematical Petrology Multifractals Multiple Point Statistics Spatial Data Science Spatial Statistics and Stochastic Process Modeling Each topic incorporates cross referencing to related articles and also has its own reference list to lead the reader to essential articles within the published literature The entries are arranged alphabetically for easy access and the subject and author indices are

comprehensive and extensive *Frontiers of Fractal Analysis* Santo Banerjee,A. Gowrisankar,2022-07-07 The history of describing natural objects using geometry is as old as the advent of science itself in which traditional shapes are the basis of our intuitive understanding of geometry However nature is not restricted to such Euclidean objects which are only characterized typically by integer dimensions Hence the conventional geometric approach cannot meet the requirements of solving or analysing nonlinear problems which are related with natural phenomena therefore the fractal theory has been born which aims to understand complexity and provide an innovative way to recognize irregularity and complex systems Although the concepts of fractal geometry have found wide applications in many forefront areas of science engineering and societal issues they also have interesting implications of a more practical nature for the older classical areas of science Since its discovery there has been a surge of research activities in using this powerful concept in almost every branch of scientific disciplines to gain deep insights into many unresolved problems This book includes eight chapters which focus on gathering cutting edge research and proposing application of fractals features in both traditional scientific disciplines and in applied fields *Spatial Analysis for Radar Remote Sensing of Tropical Forests* Gianfranco D. De Grandi,Elsa Carla De Grandi,2021-03-24 This book is based on the authors extensive involvement in Synthetic Aperture Radar SAR mapping projects targeting the health of an earth ecosystem with great relevance for climate change studies the tropical forests The subject is developed from a vantage point provided by analysis in a combined space scale frequency time wavelength polarization domain The combination of space and scale offers the capability to zoom in and out like a virtual microscope to the resolution in tune with the underlying ecological phenomenon It also enables statistical measures correlations related to the forest spatial distribution in case of backscatter or to the canopy height variations in case of interferometric observations The time dimension brings into play measures of the ecosystem dynamics such as the flooding extent in the swamp forests deforestation or degradation events The book s spotlight is on radar spatial random fields these being populated by either backscatter observations or elevation data from interferometric SAR The basic tenet here is that the spatial statistic of the fields measured by the wavelet variance in stationary or non stationary situations carries fingerprints of the forest structure Features Uniquely focused on specific techniques that provide multi resolution spatial and temporal analysis of forest structure characteristics and changes Examines several large and important international remote sensing projects aimed at documenting entire tropical ecosystems Provides novel wavelet methods for tropical forest structural measures Includes Python code for a suite of wavelet based time series and single set InSAR coherence and backscatter speckle filters available to download As the first book on this topic this composite approach appeals to both students learning through important case studies and to researchers finding new ideas for future studies *Machine Intelligence and Signal Analysis* M. Tanveer,Ram Bilas Pachori,2018-08-07 The book covers the most recent developments in machine learning signal analysis and their applications It covers the topics of machine intelligence such as deep learning soft computing approaches support vector

machines SVMs least square SVMs LSSVMs and their variants and covers the topics of signal analysis such as biomedical signals including electroencephalogram EEG magnetoencephalography MEG electrocardiogram ECG and electromyogram EMG as well as other signals such as speech signals communication signals vibration signals image and video Further it analyzes normal and abnormal categories of real world signals for example normal and epileptic EEG signals using numerous classification techniques The book is envisioned for researchers and graduate students in Computer Science and Engineering Electrical Engineering Applied Mathematics and Biomedical Signal Processing *9th International Conference on the Development of Biomedical Engineering in Vietnam* Van Toi Vo,Thi-Hiep Nguyen,Binh Long Vong,Ngoc Bich Le,Thanh Qua Nguyen,2023-10-18 This book presents cutting edge research and developments in the field of biomedical engineering with a special emphasis on results achieved in Vietnam and neighboring low and middle income countries Covering both fundamental and applied research and focusing on the theme of Translational Healthcare Technology from Advanced to Low and Middle Income Countries in the Era of Covid and Digital Transformation it reports on the design fabrication and application of low cost and portable medical devices biosensors and microfluidic devices on improved methods for biological data acquisition and analysis on nanoparticles for biological applications and on new achievements in biomechanics tissue engineering and regeneration It describes the developments of molecular and cellular biology techniques neuroengineering techniques and statistical and computational methods including artificial intelligence for biomedical applications It also discusses strategies to address some relevant issues in biomedical education and entrepreneurship Gathering the proceedings of the 9th International Conference on The Development of Biomedical Engineering in Vietnam BME 9 held on December 27 29 2022 in Ho Chi Minh Vietnam the book offers important answers to current challenges in the field and a source of inspiration for scientists engineers and researchers with various backgrounds working in different research institutes companies and countries *Modern Engineering Mathematics* Abul Hasan Siddiqi,Mohamed Al-Lawati,Messaoud Boulbrachene,2017-12-22 This book is a compendium of fundamental mathematical concepts methods models and their wide range of applications in diverse fields of engineering It comprises essentially a comprehensive and contemporary coverage of those areas of mathematics which provide foundation to electronic electrical communication petroleum chemical civil mechanical biomedical software and financial engineering It gives a fairly extensive treatment of some of the recent developments in mathematics which have found very significant applications to engineering problems *Fractal Behaviour of the Earth System* V.P. Dimri,2005-12-27 It is with pleasure that I write the foreword to this excellent book A wide range of observations in geology and solid earth geophysics can be plained in terms of fractal distributions In this volume a collection of pers considers the fractal behavior of the Earth s continental crust The book begins with an excellent introductory chapter by the editor Dr V P Dimri Surface gravity anomalies are known to exhibit power law spectral behavior under a wide range of conditions and scales This is self affine fractal behavior Explanations of this behavior remain controversial In chapter 2 V P

Dimri and R P Srivastava model this behavior using Voronoi tessellations Another approach to understanding the structure of the continental crust is to use electromagnetic induction experiments Again the results often exhibit power law spectral behavior In chapter 3 K Bahr uses a fractal based random resistor network model to explain the observations Other examples of power law spectral observations come from a wide range of well logs using various logging tools In chapter 4 M Fedi D Fiore and M La Manna utilize multifractal models to explain the behavior of well logs from the main KTB borehole in Germany In chapter 5 V V Surkov and H Tanaka model the electrokinetic currents that may be associated with seismic electric signals using a fractal porous media In chapter 6 M Pervukhina Y Kuwahara and H Ito use fractal networks to correlate the elastic and electrical properties of porous media
