The Worlds 20 Greatest Unsolved Problems:

The World's 20 Greatest Unsolved Problems John R. Vacca, 2005 When Phebe Hedges a woman in East Hampton New York walked into the sea in 1806 she made visible the historical experience of a family affected by the dreaded disorder of movement mind and mood her neighbors called St Vitus s dance Doctors later spoke of Huntington s chorea and today it is known as Huntington s disease This book is the first history of Huntington s in America Starting with the life of Phebe Hedges Alice Wexler uses Huntington s as a lens to explore the changing meanings of heredity disability stigma and medical knowledge among ordinary people as well as scientists and physicians She addresses these themes through three overlapping stories the lives of a nineteenth century family once said to belong to the disease the emergence of Huntington s chorea as a clinical entity and the early twentieth century transformation of this disorder into a cautionary eugenics tale In our own era of expanding genetic technologies this history offers insights into the social contexts of medical and scientific knowledge as well as the legacy of eugenics in shaping both the knowledge and the lived experience of this disease

Thermodynamics And Equations Of State For Matter: From Ideal Gas To Quark-gluon Plasma Vladimr E Fortov, 2016-03-24 The monograph presents a comparative analysis of different thermodynamic models of the equations of state The basic ideological premises of the theoretical methods and the experiment are considered The principal attention is on the description of states that are of greatest interest for the physics of high energy concentrations which are either already attained or can be reached in the near future in controlled terrestrial conditions or are realized in astrophysical objects at different stages of their evolution Ultra extreme astrophysical and nuclear physical applications are also analyzed where the thermodynamics of matter is

affected substantially by relativism high power gravitational and magnetic fields thermal radiation transformation of nuclear particles nucleon neutronization and quark deconfinement The book is intended for a wide range of specialists engaged in the study of the equations of state of matter and high energy density physics as well as for senior students and postgraduates
