The Psychology of Science and the Origins of the Scientific Mind Gregory J. Feist,2008-10-01 In this book Gregory Feist reviews and consolidates the scattered literatures on the psychology of science then calls for the establishment of the field as a unique discipline He offers the most comprehensive perspective yet on how science came to be possible in our species and on the important role of psychological forces in an individual s development of scientific interest talent and creativity Without a psychological perspective Feist argues we cannot fully understand the development of scientific thinking or scientific genius The author explores the major subdisciplines within psychology as well as allied areas including biological neuroscience and developmental cognitive personality and social psychology to show how each sheds light on how scientific thinking interest and talent arise He assesses which elements of scientific thinking have their origin in evolved mental mechanisms and considers how humans may have developed the highly sophisticated scientific fields we know today In his fascinating and authoritative book Feist deals thoughtfully with the mysteries of the human mind and convincingly argues that the creation of the psychology of science as a distinct discipline is essential to deeper understanding of human thought processes

Perspectives on Scientific Argumentation Myint Swe Khine,2011-09-30 Argumentation arriving at conclusions on a topic through a process of logical reasoning that includes debate and persuasion has in recent years emerged as a central topic of discussion among science educators and researchers There is now a firm and general belief that fostering argumentation in learning activities can develop students critical

thinking and reasoning skills and that dialogic and collaborative inquiries are key precursors to an engagement in scientific argumentation. It is also reckoned that argumentation helps students assimilate knowledge and generate complex meaning. The consensus among educators is that involving students in scientific argumentation must play a critical role in the education process itself. Recent analysis of research trends in science education indicates that argumentation is now the most prevalent research topic in the literature. This book attempts to consolidate contemporary thinking and research on the role of scientific argumentation in education. *Perspectives on Scientific Argumentation* brings together prominent scholars in the field to share the sum of their knowledge about the place of scientific argumentation in teaching and learning. Chapters explore scientific argumentation as a means of addressing and solving problems in conceptual change reasoning, knowledge building and the promotion of scientific literacy. Others interrogate topics such as the importance of language, discursive practice, social interactions and culture in the classroom. The material in this book, which features intervention studies, discourse analyses, classroom based experiments, anthropological observations and design based research, will inform theoretical frameworks and changing pedagogical practices as well as encourage new avenues of research.

The Development of Scientific Thinking Skills Deanna Kuhn, Eric Amsel, Michael O'Loughlin, 1988-02-28 How is existing knowledge reconciled with new information in the mind of a young child as compared to that of a more sophisticated thinker? *Development of Scientific Thinking Skills* explores a new framework for the conceptualization of changes in the strategies of inductive reasoning from middle childhood to adulthood. Cognitive development, Thinking skills, Scientific thinking, Evidence evaluation, Theory Revision.

Embracing Diversity in the Learning Sciences Yasmin B. Kafai, 2012-10-12 More than a decade has passed since the First International Conference of the Learning Sciences (ICLS) was held at Northwestern University in 1991. The conference has now become an established place for researchers to gather. The 2004 meeting is the first under the official sponsorship of the International Society of the Learning Sciences (ISLS). The theme of this conference is Embracing Diversity in the Learning Sciences. As a field, the learning

sciences have always drawn from a diverse set of disciplines to study learning in an array of settings Psychology cognitive science anthropology and artificial intelligence have all contributed to the development of methodologies to study learning in schools museums and organizations As the field grows however it increasingly recognizes the challenges to studying and changing learning environments across levels in complex social systems This demands attention to new kinds of diversity in who what and how we study and to the issues raised to develop coherent accounts of how learning occurs Ranging from schools to families and across all levels of formal schooling from pre school through higher education this ideology can be supported in a multitude of social contexts The papers in these conference proceedings respond to the call

Scientific Reasoning and Argumentation Frank Fischer, Clark A. Chinn, Katharina Engelmann, Jonathan Osborne, 2018-06-13 Competence in scientific reasoning is one of the most valued outcomes of secondary and higher education However there is a need for a deeper understanding of and further research into the roles of domain general and domain specific knowledge in such reasoning This book explores the functions and limitations of domain general conceptions of reasoning and argumentation the substantial differences that exist between the disciplines and the role of domain specific knowledge and epistemologies Featuring chapters and commentaries by widely cited experts in the learning sciences educational psychology science education history education and cognitive science Scientific Reasoning and Argumentation presents new perspectives on a decades long debate about the role of domain specific knowledge and its contribution to the development of more general reasoning abilities
