Natural Wastewater Treatment Systems, Second Edition Ronald W. Crites, E. Joe Middlebrooks, Robert K. Bastian, 2014-03-14 Calling for ecologically and economically sound wastewater treatment systems the authors of Natural Wastewater Treatment Systems explore the use of wetlands sprinkler or deep irrigation groundwater recharge and other natural systems as sustainable methods for the treatment and management of wastewater Based on work by prominent experts in natural waste treatment this text provides a thorough explanation on how soil and plants can successfully sustain microbial populations in the treatment of wastewater Determining that natural systems cost less to construct and operate and require less energy than mechanical treatment alternatives this book also explains how these processes produce lower amounts of residual solids and use little or no chemicals What's New in the Second Edition This revised edition includes current design and regulatory and operational developments in the natural wastewater treatment field It provides detailed

examples and analyses along with significant operational data in each chapter. It also considers how processes provide passive treatment with a minimum of mechanical elements and describes new approaches to partially mixed ponds including dual powered aeration ponds. Introduces the planning procedures and treatment mechanisms responsible for treatment in ponds, wetlands, land application and soil absorption systems. Provides new case studies of constructed wetlands and water reuse systems. Presents design criteria and methods of pond treatment and pond effluent upgrading. Describes constructed wetlands design procedures, process applications, treatment performance data and land treatment concepts and design equations. Includes information on constituents of emerging concern CEC and their fate in natural systems. The text discusses wastewater pond systems, free water surface constructed wetlands, subsurface and vertical flow constructed wetlands, land treatment, sludge management and onsite wastewater systems. It describes residuals and biosolids management including nitrogen removal, pretreatment methods and uses U.S. customary and metric units in all chapters. It presents case studies of new applications of natural systems and includes worked examples of design equations for ponds and land treatment. It also provides a biosolids regulatory update from a top EPA scientist and algae reduction technologies for ponds and wetlands. Designed for practicing wastewater engineers and scientists involved in the planning, design and operation of ponds, wetlands, land treatment, biosolids and onsite soil based treatment systems, the book integrates many natural treatment systems into one single source.

Constructed Subsurface Wetlands Abdel Razik Ahmed Zidan, Mohammed Ahmed Abdel

Hady, 2018-01-03 With a sharp focus on environmental pollution and its impact on life and nature, scientists and engineers have studied the water treatment effect of natural wetlands for many years, resulting in the development of constructed wetlands (CWs) for treating wastewater. This informative new book provides current information and guidance on the construction, performance, operation and maintenance of subsurface flow constructed wetlands of domestic and municipal wastewater. The focus of the volume is to evaluate the performance of horizontal subsurface flow constructed wetlands in treating domestic wastewater to establish the limit that can be safely discharged to agricultural drains. Two step procedures were used for the preparation of this book. Using modeling and statistical analyses of treated water samples showed a significant difference between different media for the treatment of most pollutants. The authors went on to design artificial neural network models (ANNs) using Matlab software to simulate some of the experimental data and to anticipate the parameters of output concentration. The wetland systems have the ability to deal with various pollutants with different concentrations and to decrease the treated water to the standard limits. This volume presents the main role of emergent plants for treatment performance in the constructed wetlands and will be a very important resource for engineers in this field as well as for both undergraduate and graduate students.

Treatment Marshes for Runoff and Polishing Robert H. Kadlec, 2019-07-09 Treatment Marshes for Runoff and Polishing represents the most comprehensive and up to date resource for the design, construction and operation of marsh treatment systems. This new edition represents a complete
