Establishment of Local Trip Generation Rates Or Equations for Mixed-use Developments in Kansas Mehrdad Givchi, 2012 Currently the trip generation rates and equations contained in the Institute of Transportation Engineers ITE Trip Generation Manual 8th Edition are based on the information collected at single use free standing sites and cannot be directly applied to multi use developments Application of this data for multi use development sites requires use of an adjustment factor called internal capture rate which is expressed as a percent reduction to the trips generated by individual land uses These reductions are applied externally to the site at the entrances adjacent intersections and roadways They are distinct and separate from pass by and diverted link trips and are applied before pass by and diverted link trip reductions are applied While the trip generation rates for individual uses on a multi use development site may be the same or similar to what they are for free standing sites there is potential for interaction between among those uses within the site particularly where the trip can be made by walking As a result the total generation of vehicle trips entering and exiting the multi use site may be reduced from simply a sum of the individual discrete trips generated by each land use Because the development of mixed use or multi use sites is increasingly popular ITE wishes to increase the database on multi use developments in order to provide internal capture data for a broader range of land uses ITE would appreciate additional data from analyses of such developments The goal of this research project is to establish a local trip generation rate model for multi use developments in state of Kansas which can potentially be submitted to the ITE headquarter for inclusion in the national database as well The primary objectives were to identify several appropriate multi use development sites in the state and document vehicular trip data generated by each site in order to develop a trip generation model that can be used to better estimate trip numbers generated by such sites A total of three sites were selected and studied for this project including Mission Farms and Park Place developments both in Leawood Kansas and Metcalf95 Complex in Overland Park Kansas *Enhancing Internal Trip*

Capture Estimation for Mixed-use Developments Brian S. Bochner, Kevin G. Hooper, Benjamin R. Sperry, Robert T. Dunphy, 2011 TRB's National Cooperative Highway Research Program NCHRP Report 684 Enhancing Internal Trip Capture Estimation for Mixed Use Developments explores an improved methodology to estimate how many internal trips will be generated in mixed use developments trips for which both the origin and destination are within the development The methodology estimates morning and afternoon peak period trips to and from six specific land use categories office retail restaurant residential cinema and hotel The research team analyzed existing data from prior surveys and collected new data at three mixed use development sites The resulting methodology is incorporated into a spreadsheet model which is available online for download

Fundamentals of Plan Making Edward J. Jepson, Jr., Jerry Weitz, 2015-12-07 Urban and regional planning programs aspire to prepare practitioners to write and implement plans primarily at the local level of government These programs are very much professional in their aspirations as opposed to research oriented Yet academic planning programs often place greater emphasis on theory than practice For decades the planning academy has acknowledged a major disconnect between what the planning academy teaches students and the techniques and skills needed to be a successful professional practitioner Fundamentals of Plan Making will give planning students an understanding of research design as it applies to planning develop familiarity with various data sources and help them acquire knowledge and the ability to conduct basic planning analyses such as population projections housing needs assessments development impact analyses and land use plans Students will also learn how to implement the various citizen participation methods used by planners and develop an appreciation of the values and roles of practicing planners In Fundamentals of Plan Making Edward Jepson and Jerry Weitz bring their extensive experience as practicing academics and give planning students the practical hands on tools they need to implement the various methods used to create and implement real plans and policies Its chapters on transportation housing environment economic development and other core development topics also make it a handy reference for planning practitioners

Computer Modelling for Sustainable Urban Design Darren Robinson, 2012-11-12 This is the first book to directly address the physics of urban sustainability and how urban sustainability may be modelled and optimised Starting with an introduction to the importance and key aspects of the topic it moves on to a detailed consideration of the urban climate and pedestrian comfort Comprehensive techniques for the modelling and optimisation of urban metabolism are then described together with means for defining sustainability as the fitness function to be optimised It ends with an eye to the future of sustainable urban design and the means available to urban designers and governors to help them to secure a more sustainable urban future This book will be invaluable both in informing the next generation of urban planners architects and engineers and as a tool to current professionals that will directly contribute to the effectiveness of their work by allowing them to more successfully measure and model urban sustainability

OECD Green Growth Studies Compact City Policies: Korea Towards Sustainable and Inclusive Growth OECD,2014-11-28 This report examines Korea s urban policies and offers customised policy recommendations based on the OECD publication Compact City Policies 2012 Sunridge Properties, Rancho Cordova ,2010 **The Carbon Efficient City** Al Hurd,2012-09-01 The Carbon Efficient City shows how regional economies can be aligned with practices that drive carbon efficiency It details ten strategies for reducing carbon emissions in our cities standardized measurement frameworks that support innovation regulatory alignment reducing consumption reuse and restoration focus on neighborhoods providing spaces for nature use of on site life cycles for water and energy coordination of regional transportation and emphasis on solutions that delight people Although climate change is recognized as an urgent concern local and national governments nonprofits and private interests often work at cross purposes in attempting to address it The Carbon Efficient City s focus on concrete achievable measures that can be implemented in a market economy gives it broad appeal to professionals and engaged citizens across the political spectrum Watch the book trailer <https://www.youtube.com/watch?v=Pg3h0fhYyA>

Sustainable Transport Development, Innovation and Technology Michał Suchanek,2017-03-27 This proceedings volume presents current research on transport sector development with particular emphasis on sustainable transport development innovation and transport enterprise growth and survival Derived from the 2016 TranSopot Conference held in Sopot Poland this book aims to show the possibilities of maximizing the efficiency of transport while keeping the negative effects at a sustainable level Transport is an important field of human activity both from economic and social points of view It has been proven that the development of transport contributes to the development of regional national and international economic relations Currently the three most important topics in transportation research are green transport transport innovations and metropolitan transport These are the areas in which the contributions presented in this book are focused Researchers in the field of sustainable transport provide the reader with a comprehensive description of possible activities towards green transport both in the terms of various transport branches and in the supply chain as a whole This is the framework of the second field of transport research innovation The authors present a wide array of a technological organizational process and marketing innovation which allow transport organizers and operators to provide service in a safe sound and economically favorable way The analysis of these innovations and the practical implications of their introduction should be a worthwhile experience both for the transport researchers and for the transport business practitioners Lastly the book reflects the tendencies of rapid development in urban and metropolitan areas which forces transport policy makers to provide citizens with a comfortable and faster way of commuting that doesn t result in unacceptable congestion or other negative effects

Different concepts of metropolitan transport management are presented and their effect on the transport systems is also investigated

Urban Transportation Planning in the United States Edward Weiner, 2016-09-16 In this new fifth edition there is a strong focus on the increasing concern over infrastructure resilience from the threat of serious storms human activity and population growth The new edition also looks technologies that urban transportation planners are increasingly focused on such as vehicle to vehicle communications and driver less cars which have the potential to radically improve transportation This book also investigates the effects of transportation on the health of travelers and the general public and the ways in which these concerns have become additional factors in the transportation and infrastructure planning and policy process The development of U S urban transportation policy over the past half century illustrates the changing relationships among federal state and local governments This comprehensive text examines the evolution of urban transportation planning from early developments in highway planning in the 1930s to today s concerns over sustainable development security and pollution control Highlighting major national events the book examines the influence of legislation regulations conferences federal programs and advances in planning procedures and technology The volume provides in depth coverage of the most significant event in transportation planning the Federal Aid Highway Act of 1962 which created a federal mandate for a comprehensive urban transportation planning process carried out cooperatively by states and local governments with federal funding Claiming that urban transportation planning is more sophisticated costly and complex than its highway and transit planning predecessors the book demonstrates how urban transportation planning evolved in response to changes in such factors as the environment energy development patterns intergovernmental coordination and federal transit programs This new edition includes analyses of the growing threats to infrastructure new projects in infrastructure resilience the promise of new technologies to improve urban transportation and the recent shifts in U S transportation policy This book will be of interest to researchers and practitioners in transportation legislation and policy eco justice and regional and urban planning
