101 YEARS OF GLOBAL INVESTMENT RETURNS

Triumph Of The Optimists

Mark Zandi, Satyajit Das, John Authers

Triumph Of The Optimists:

Triumph of the Optimists Elroy Dimson, Paul Marsh, Mike Staunton, 2009-04-11 Brilliant Time By far the most important investment book in years Bloomberg Money A book that belongs on every investor's bookshelf MSN.com An essential and authoritative account of a century of investment returns in sixteen countries: the U.S., the U.K., Japan, France, Germany, Canada, Italy, Spain, Switzerland, Australia, the Netherlands, Sweden, Belgium, Ireland, Denmark, and South Africa. Investors have too often extrapolated from recent experience. In the 1950s, who but the most rampant optimist would have dreamt that over the next fifty years the real return on equities would be 9% per year? Yet this is what happened in the U.S. stock market. The optimists triumphed. However, as Don Marquis observed, an optimist is someone who never had much experience. In *Triumph of the Optimists*, renowned investment authorities Elroy Dimson, Paul Marsh, and Mike Staunton extend our experience across regions and across time. They present a comprehensive and consistent analysis of investment returns for equities, bonds, bills, currencies, and inflation spanning sixteen countries from the end of the nineteenth century to the beginning of the twenty-first. This is achieved in a clear and simple way with over 130 color diagrams that make comparison easy. Crucially, the authors analyze total returns including reinvested income. They show that some historical indexes overstate long-term performance because they are contaminated by survivorship bias and that long-term stock returns are in most countries seriously overestimated due to a focus on periods that with hindsight are known to have been successful. The book also provides the first comprehensive evidence on the long-term equity risk premium, the reward for bearing the risk of common stocks. The authors reveal whether the United States and United Kingdom have had unusually high stock market returns compared to other countries. The book covers the U.S., the U.K., Japan, France, Germany, Canada, Italy, Spain, Switzerland, Australia, the Netherlands, Sweden, Belgium, Ireland, Denmark, and South Africa. *Triumph of the Optimists* is required reading for investment professionals, financial economists, and investors. It will be the definitive reference in the field and consulted for years to come. *Modern Portfolio Theory and Investment Analysis* Edwin J. Elton, Martin J.

Gruber, Stephen J. Brown, William N. Goetzmann, 2014-01-21 An excellent resource for investors *Modern Portfolio Theory and Investment Analysis* 9th Edition examines the characteristics and analysis of individual securities as well as the theory and practice of optimally combining securities into portfolios. A chapter on behavioral finance is included aimed to explore the nature of individual decision making. A chapter on forecasting expected returns, a key input to portfolio management, is also included. In addition, investors will find material on value at risk and the use of simulation to enhance their understanding of the field. [The Fearful Rise of Markets](#) John Authers, 2010-04-08 Are we barreling toward another massive global financial catastrophe? How can so many bubbles form all at once? Why are so many disconnected markets now capable of collapsing in unison? In this remarkably readable book, award-winning Financial Times columnist John Authers takes on these critical questions and offers deeply sobering answers. Authers reveals how the first truly global super bubble was inflated and might

now be inflating again He illuminates the multiple roots of repeated financial crises a massive shift in investing power from individuals to big institutions the migration of key decisions from banks to capital markets the wholesale financialization of many asset classes and fundamental failures of both theory and policy The Fearful Rise of Markets presents a truly global view avoiding oversimplifications and ideology as it outlines how we got here and where we stand Even more valuable it offers realistic solutions for decision makers who want to prevent disaster and investors who want to survive it The herd grows ever larger and more dangerous How institutional investing indexing and efficient markets theory promote herding Cheap money and irrational exuberance Super fuel for super bubbles Too big to fail the whole story of moral hazard Banks hedge funds and beyond Danger signs of the next bubble Forex equity credit and commodity markets move once more in alignment

Invest in long term health care insurance *Pension Puzzles* Melissa Hardy, Lawrence Hazelrigg, 2007-07-19 The rancorous debate over the future of Social Security reached a fever pitch in 2005 when President Bush unsuccessfully proposed a plan for private retirement accounts. Although efforts to reform Social Security seem to have reached an impasse, the long term problem the projected Social Security deficit remains. In *Pension Puzzles*, sociologists Melissa Hardy and Lawrence Hazelrigg explain for a general audience the fiscal challenges facing Social Security and explore the larger political context of the Social Security debate. *Pension Puzzles* cuts through the sloganeering of politicians in both parties, presenting Social Security's technical problems evenhandedly and showing how the Social Security debate is one piece of a larger political struggle. Hardy and Hazelrigg strip away the ideological baggage to explicate the basic terms and concepts needed to understand the predicament of Social Security. They compare the cases for privatizing Social Security and for preserving the program in its current form with adjustments to taxes and benefits, and they examine the different economic projections assumed by proponents of each approach. In pursuit of its privatization agenda, Hardy and Hazelrigg argue the Bush administration has misled the public on an issue that was already widely misunderstood. The authors show how privatization proponents have relied on dubious assumptions about future rates of return to stock market investments and about the average citizen's ability to make informed investment decisions. In addition, the administration has painted the real but manageable shortfalls in Social Security revenue as a fiscal crisis. Projections of Social Security revenues and benefits by the Social Security Administration have treated revenues as fixed when in fact they are determined by choices made by Congress. Ultimately, as Hardy and Hazelrigg point out, the clash over Social Security is about more than technical fiscal issues; it is part of the larger culture wars and the ideological struggle over what kind of social responsibilities and rights American citizens should have. This rancorous partisan wrangling, the alarmist talk about a crisis in Social Security, and the outright deception employed in this debate have all undermined the trust between citizens and government that is needed to restore the solvency of Social Security for future generations of retirees. Drawing together economic analyses, public opinion data, and historical narratives, *Pension Puzzles* is a lucid and engaging guide to the major proposals for Social Security reform. It is also an insightful exploration of what that debate reveals about American political culture in the twenty-first century. A Volume in the American Sociological Association's Rose Series in Sociology **The Financial Times Guide to How the Stock Market Really Works** Leo Gough, 2012-09-07 The *Financial Times Guide to How the Stock Market Really Works* is an introduction to the complex world of the financial markets. Siegel , Paul McCaffrey ,2023-06-06 In 2001 Martin Leibowitz organized an Equity Risk Premium ERP Forum for CFA Institute in which the participants discussed issues related to the ERP and made estimates for the future This forum was repeated by Leibowitz Brett Hammond and Laurence Siegel in 2011 setting a precedent for a decennial forum Siegel organized and moderated the discussion in 2021 and the proceedings from that event make up the current book The participants in 2021 were in alphabetical order Robert Arnott Clifford Asness Mary Ida Compton Elroy Dimson William Goetzmann Roger Ibbotson Antti Ilmanen Martin Leibowitz Rajnish Mehra Thomas Philips and Jeremy Siegel Each participant made a presentation which was then discussed by the whole group Finally a roundtable discussion involving all of the participants was moderated by Laurence Siegel Ibbotson and Dimson discussed historical returns in different countries Ibbotson focused on the United States while Dimson took a global industrial country view The history goes back almost a century Ibbotson or more than a century Dimson providing a look at how returns have evolved over a wide variety of conditions Ibbotson also presented his method for making probabilistic forecasts of returns Dimson who is British showed that American exceptionalism is one way to understand the results Asness looked at the effectiveness of Robert Shiller s CAPE cyclically adjusted price earnings ratio valuation measure for forecasting Valuations rose over the period he studied and a lively discussion was had about why this may have occurred Arnott focused on the growth rate of dividends which has been very slow in per share terms and argued with much debate from the other participants that buybacks are only a partial substitute for dividends Leibowitz also looking at valuation as the lodestone of return forecasts set forth a growth adjustment that brought his forecast in line with those made by others Compton a consultant to pension plans discussed the challenges of communicating lower expected returns to clients She also emphasized that expected returns don t always come true they re just someone s best forecast Ilmanen broke up the expected return into its component parts dividends real growth inflation and so forth Doing this he said allows one to debate the estimates for each part and ascertain how accurate each of

the estimates is Philips started by presenting a method for forecasting bond returns He then turned to equities for which he compared forecasts with subsequent realizations using a variety of forecast methods Mehra discussed a number of issues related to the existence of premiums equity risk value small cap and so forth and concluded that although some of these are unstable the ERP is highly stable Jeremy Siegel advocated a back to basics approach using dividend and earnings yields dividend and earnings growth rates payout ratios and price to earnings ratios He emphasized that earnings can be calculated in a number of different way and said that accounting practices have become more conservative over the years Goetzmann concluded the session by reporting that one company a water mill in France had almost 600 years of historical return data and that an asset pricing model could be tested using those data According to this model the stock price is the present value of expected future dividends and is supported by the evidence In sum because of high valuations and low interest rates the participants expect lower total returns in the future than in the past A forward looking ERP of 4% to 5% was the consensus of the group
