David W. Daniels,2018-01-09 Modern research techniques have revealed a hidden scheme aimed at God s Holy Words Modern Bibles have changed many verses because of the discovery of an ancient manuscript in a monastery on the Sinai Peninsula The manuscript called Sinaiticus is claimed to be the earliest complete copy of the New Testament Its discoverer who was a world leading Bible scholar in his time told the world Sinaiticus was from the 4th century and that it was the oldest and best Bible available Publishers rushed to make new Bibles with many changes to match it But not everyone agreed When this famed 19th century Bible scholar Constantine Von Tischendorf claimed the ancient date a well known Greek calligrapher said No I made that document But why did no one believe him Maybe it s because pages of the manuscript were stored where no one could view them archived in exclusive collections across several continents Now an international group has carefully photographed each page of Sinaiticus and is displaying it on the internet as high quality digital images For the first time Bible scholars and students can see the entire manuscript together as was never possible before And what they are seeing with their own eyes is shocking Some of the pages are white and look quite new while others have been darkened to make them look very old If they are all from the same old Bible how can this be Researcher David W Daniels proves with easy to understand evidence that the Sinaiticus is not the oldest manuscript and certainly not the best either He is also convincing in showing it s not old after all and that the Greek calligrapher did make it in the 19th century The textual and doctrinal changes in modern Bibles are based upon a fake a shadowy scheme worthy of Satan s hatred for the preserved words of God **Using the Biological Literature** Diane Schmidt,2014-04-14 The biological sciences cover a broad array of literature types from younger fields like molecular biology with its reliance on recent journal articles genomic databases and protocol manuals to classic fields such as taxonomy with its scattered literature found in monographs and journals from the past three centuries Using the Biological Literature A Practical Guide Fourth Edition is an annotated guide to selected resources in the biological sciences presenting a wide ranging list of important sources This completely revised edition contains numerous new resources and descriptions of all entries including textbooks The guide emphasizes current materials in the English language and includes retrospective references for historical perspective and to provide access to the taxonomic literature It covers both print and electronic resources including monographs journals databases indexes and abstracting tools websites and associations providing users with listings of authoritative informational resources of both classical and recently published works With chapters devoted to each of the main fields in the basic biological sciences this book offers a guide to the best and most up to date resources in biology It is appropriate for anyone
