Psychoanalytical neuroscience: Exploring psychoanalytic concepts with neuroscientific methods Nikolai Axmacher, Henrik Kessler, Gerd Thomas Waldhauser, 2015-01-09 Sigmund Freud was a trained neuroanatomist and wrote his first

psychoanalytical theory in neuroscientific terms Throughout his life he maintained the belief that at some distant day in the future all psychoanalytic processes could be tied to a neural basis We must recollect that all of our provisional ideas in psychology will presumably one day be based on an organic substructure Freud 1914 On Narcissism An Introduction

Fundamental Freudian concepts reveal their foundation in the physiological science of his time most importantly among them the concept of libidinous energy and the homeostatic principle of constancy However the subsequent history of psychoanalysis and neuroscience was mainly characterized by mutual ignorance or even opposition many scientists accused psychoanalytic viewpoints not to be scientifically testable and many psychoanalysts claimed that their theories did not need empirical support outside of the therapeutic situation On this historical background it may appear surprising that the recent years have seen an increasing interest in re connecting psychoanalysis and neuroscience in various ways By studying psychodynamic consequences of brain lesions in neurological patients by investigating how psychoanalytic therapy affects brain structure and function or even by operationalizing psychoanalytic concepts in well controlled experiments and exploring their neural correlates These empirical studies are accompanied by theoretical work on the philosophical status of the neuropsychanalytic endeavour In this volume we attempt to provide a state of the art overview of this new exciting field All types of submissions are welcome including research in patient populations healthy human participants and animals review articles on some empirical or theoretical aspect and of course also critical accounts of the new field Despite this welcome variability we would like to suggest that all contributions attempt to address one or both of two main questions which should motivate the connection between psychoanalysis and neuroscience and that in our opinion still remain exigent First from the neuroscientific side why should researchers in the neurosciences address psychoanalytic ideas and what is or will be the impact of this connection on current neuroscientific theories Second from the psychoanalytic side why should psychoanalysts care about neuroscientific studies and how can current psychoanalytical theory and practice benefit from their results Of course contributors are free to provide a critical viewpoint on these two questions as well

Textbook of Psychoanalysis Glen O. Gabbard, Bonnie E. Litowitz, Paul Williams, 2012-09-24 The second edition of this groundbreaking text represents a complete departure from the structure and format of its predecessor Though still exhaustive in scope and designed to provide a knowledge base for a broad audience from the beginning student to the seasoned analyst or academician this revision emphasizes the interdisciplinary nature of psychoanalytic thought and boldly focuses on current American psychoanalysis in all its conceptual and clinical diversity This approach reflects the perspective of the two new co editors whose backgrounds in linguistics and social anthropology inform and enrich their clinical practice and the six new section editors who themselves reflect the diversity of backgrounds and thinking in contemporary American psychoanalysis The book begins with Freud and his circle and the origins of psychoanalysis and goes on to explore its development in the post Freud era This general introduction orients the reader and helps to contextualize the six sections that follow The most

important tenets of psychoanalysis are defined and described in the Core Concepts section including theories of motivation unconscious processes transference and countertransference defense and resistance and gender and sexuality These eight chapters constitute an excellent introduction to the field of psychoanalysis The Schools of Thought section features chapters on the most influential theories from object relations to self psychology to attachment theory and relational psychoanalysis and includes the contributions of Klein and Bion and of Lacan Rather than making developmental theory a separate section as in the last edition developmental themes now permeate the Schools of Thought section and illuminate other theories and topics throughout the edition Taking a more clinical turn the Treatment and Technique section addresses critical subjects such as transference and countertransference theories of therapeutic action process interpretation and resistance termination and reanalysis combined psychoanalysis and psychopharmacotherapy child analysis ethics and the relationship between psychoanalysis and psychodynamic psychotherapy A substantive utterly current and meticulously referenced section on Research provides an in depth discussion of outcome process and developmental research The section entitled Psychoanalysis and Other Disciplines takes the reader on a fascinating tour through the many fields that psychoanalysis has enriched and been enriched by including the neurosciences philosophy anthropology race ethnicity literature visual arts film and music A comprehensive Glossary completes this indispensable text The Textbook of Psychoanalysis is the only comprehensive textbook of psychoanalysis available in the United States This masterful revision will both instruct and engage those who are learning psychoanalysis those who practice it and those who apply its theories to related disciplines Though always controversial this model of the human psyche still provides the best and most comprehensive insight into human nature

Relationship to God discusses four distinct attachment relationships to the God of personal spiritual experience and considers how each of these relationships has implications for working with clients in psychotherapy Geoff Goodman uses Attachment Informed Psychotherapy AIP to explore the connection between a relationship to God and a relationship to caregivers during childhood By analyzing the attachment relationships evident in the lives of four public figures human rights activist Coretta Scott King Jewish Holocaust victim Anne Frank Alcoholics Anonymous co founder Bill W and founder of psychoanalysis Sigmund Freud this book demonstrates how their attachment relationships with their caregivers during childhood helped to determine the quality of their attachment relationship or nonrelationship to God in later life Goodman demonstrates how to use AIP to work with these attachment relationships formulating a psychotherapeutic treatment plan for each one with the goal of restoring wholeness and unity This book will be a valuable resource for psychoanalysts psychotherapists and marriage and family therapists in practice and in training

Transforming the Internal World and Attachment Geoff Goodman, 2010 Transforming the Internal World and Attachment reviews and discusses four theories about what makes psychotherapy effective across forms of treatment treatment settings and diagnostic categories mindfulness mentalization psychological mindedness and the attachment relationship Geoff Goodman offers some provisional hypotheses about therapeutic effectiveness and suggests some ways of testing these hypotheses empirically using sophisticated assessment instruments that measure psychotherapy process and outcome Managed care companies are withholding reimbursements for treatments not considered empirically supported Instead of engaging in horse races with randomized controlled trials RCTs Goodman suggests that we need to establish an empirical basis for the therapeutic effectiveness of all forms of treatment move beyond examining common factors such as the therapeutic alliance and turn our collective attention to common factors that psychotherapy researchers often erroneously promote as specific factors Perhaps these so called specific factors produce therapeutic change regardless of the brand name treatment packages through which they are typically delivered These specific factors might also work better for particular groups of patients with specific problem areas such as affect dysregulation and impulsivity In Volume I Goodman explores the empirical and clinical bases of these specific factors and outlines their various influences on psychotherapy process and outcome
