Michael J. Moran, Howard N. Shapiro, Daisie D. Boettner, Margaret B. Bailey, 2010-12-07 This leading text in the field maintains its engaging readable style while presenting a broader range of applications that motivate engineers to learn the core thermodynamics concepts Two new coauthors help update the material and integrate engaging new problems

Throughout the chapters they focus on the relevance of thermodynamics to modern engineering problems Many relevant engineering based situations are also presented to help engineers model and solve these problems *Solutions Manual to Accompany Fundamentals of Thermodynamics* Moran, 2002-05-01 **Thermal Design and Optimization** Adrian

Bejan, George Tsatsaronis, Michael J. Moran, 1995-12-12 A comprehensive and rigorous introduction to thermal system design from a contemporary perspective Thermal Design and Optimization offers readers a lucid introduction to the latest methodologies for the design of thermal systems and emphasizes engineering economics system simulation and optimization methods The methods of exergy analysis entropy generation minimization and thermoeconomics are incorporated in an evolutionary manner This book is one of the few sources available that addresses the recommendations of the Accreditation Board for Engineering and Technology for new courses in design engineering Intended for classroom use as well as self study the text provides a review of fundamental concepts extensive reference lists end of chapter problem sets helpful appendices and a comprehensive case study that is followed throughout the text Contents include Introduction to Thermal System Design Thermodynamics Modeling and Design Analysis Exergy Analysis Heat Transfer Modeling and Design Analysis Applications with Heat and Fluid Flow Applications with Thermodynamics and Heat and Fluid Flow Economic Analysis Thermoeconomic Analysis and Evaluation Thermoeconomic Optimization Thermal Design and Optimization offers engineering students practicing engineers and technical managers a comprehensive and rigorous introduction to thermal system design and optimization from a distinctly contemporary perspective Unlike traditional books that are largely oriented toward design analysis and components this forward thinking book aligns itself with an increasing number of active designers who believe that more effective system oriented design methods are needed Thermal Design and Optimization offers a lucid presentation of thermodynamics heat transfer and fluid mechanics as they are applied to the design of thermal systems This book broadens the scope of engineering design by placing a strong emphasis on engineering economics system simulation and optimization techniques Opening with a concise review of fundamentals it develops design methods within a framework of industrial applications that gradually increase in complexity These applications include among others power generation by large and small systems and cryogenic systems for the manufacturing chemical and food processing industries This unique book draws on the best contemporary thinking about design and design methodology including discussions of

concurrent design and quality function deployment Recent developments based on the second law of thermodynamics are also included especially the use of exergy analysis entropy generation minimization and thermoeconomics To demonstrate the application of important design principles introduced a single case study involving the design of a cogeneration system is followed throughout the book In addition Thermal Design and Optimization is one of the best new sources available for meeting the recommendations of the Accreditation Board for Engineering and Technology for more design emphasis in engineering curricula Supported by extensive reference lists end of chapter problem sets and helpful appendices this is a superb text for both the classroom and self study and for use in industrial design development and research A detailed solutions manual is available from the publisher *Solutions Manual for Thermodynamics* Jack Philip Holman, 1974
