they draw upon economic principles often view the work of economists as abstract not sensitive to institutional contexts and communicated in a formal language spoken by few with decision making authority Not surprisingly papers in the leading economic journals rarely cite clearly pertinent papers in planning journals and vice versa Despite the historical divergence in perspectives and methods urban economics and urban planning share an intense interest in many topic areas the nature of cities the prosperity of urban economies the provision of urban services efficient systems of transportation and the proper allocation of land between urban and environmental uses In bridging this gap this book highlights the best scholarship in planning and economics that addresses the most pressing urban problems of our day and will stimulate further dialog between scholars in urban planning and urban economics
