Triangulations And Applications Mathematics And Visualization:

Triangulations and Applications Øyvind Hjellev, Morten Dæhlen, 2006-09-19 This book will serve as a valuable source of information about triangulations for the graduate student and researcher With emphasis on computational issues it presents the basic theory necessary to construct and manipulate triangulations In particular the book gives a tour through the theory behind the Delaunay triangulation including algorithms and software issues It also discusses various data structures used for the representation of triangulations

Computational Geometry, Topology and Physics of Digital Images with Applications James F. Peters, 2019-10-03 This book discusses the computational geometry topology and physics of digital images and video frame sequences This trio of computational approaches encompasses the study of shape complexes optical vortex nerves and proximities embedded in triangulated video frames and single images while computational geometry focuses on the geometric structures that infuse triangulated visual scenes The book first addresses the topology of cellular complexes to provide a basis for an introductory study of the computational topology of visual scenes exploring the fabric shapes and structures typically found in visual scenes The book then examines the inherent geometry and topology of visual scenes and the fine structure of light and light caustics of visual scenes which bring into play catastrophe theory and the appearance of light caustic folds and cusps Following on from this the book introduces optical vortex nerves in triangulated digital images In this context computational physics is synonymous with the study of the fine structure of light choreographed in video frames This choreography appears as a sequence of snapshots of light reflected and refracted from surface shapes providing a solid foundation for detecting analyzing and classifying visual scene shapes

Advances in 3D Geo-Information Sciences Thomas H. Kolbe, Gerhard König, Claus Nagel, 2011-03-23 During the last decade developments in 3D Geoinformation have made substantial progress We are about to have a more complete spatial model and understanding of our planet in different scales Hence various communities and cities offer 3D landscape and city models as valuable source and instrument for sustainable management of rural and urban resources Also municipal utilities real estate companies etc benefit from recent developments related to 3D applications To meet the challenges due to the newest changes academics and practitioners met at the 5th International Workshop on 3D Geoinformation in order to present recent developments and to discuss future trends This book comprises a selection of evaluated high quality papers that were presented at this workshop in November 2010 The topics focus explicitly on the last achievements methods algorithms models systems with respect to 3D geo information requirements The book is aimed at decision makers and experts as well at students interested in the 3D component of geographical information science including GI engineers computer scientists photogrammetrists land surveyors urban planners and mapping specialists
