Tribology: Friction and Wear of Engineering Materials Ian Hutchings, 1992-10 Tribology is the scientific study of the interaction between sliding surfaces This text provides explanations of the phenomena of friction wear and lubrication with an emphasis on the behaviour of materials **Tribology** I. M. Hutchings, 2001 *Tribology: Friction and Wear of Engineering Materials* Irving Russo, 2023-09-26 Tribology is an interdisciplinary subject that studies the interaction between sliding surfaces It deals with three major concepts namely friction wear and lubrication Friction refers to the resistance encountered by a body when sliding past another It is a branch of mechanics High friction is required for the smooth functioning of nuts and bolts paper clips and tongs Friction is also essential for walking maintaining a grip over objects and building piles of objects Wear can be defined as the removal of material from a solid surface as a result of the mechanical action exerted by another solid To control the losses caused due to friction and wear a friction reducing film is introduced between the moving surfaces that are in contact and this process is called lubrication Thus a proper understanding of tribological processes is required to improve standards of design and increase engineering efficiency This book provides comprehensive insights into the subject of tribology It is a vital tool for all researching and studying this topic **Tribology : friction and wear of engineering materials** Ian M. Hutchings, 2005 **15th Wear of Materials** Peter J. Blau, Steven L.

Shaffer,2005-10-03 These proceedings of the 15th International Conference on Wear of Materials focus on the friction and wear of materials in various applications under different environments from the nanometer scale to the meter scale The conference provides a unique international forum for researchers and practitioners from different disciplines to exchange latest results Coverage includes Wear assessment and monitoring Wear modeling mechanisms mapping and prediction Wear corrosion testing and control Surface engineering for wear and wear corrosion control Development of new wear test methods and wear test methodologies Wear of materials for biomedical applications Wear of non equilibrium materials from atomic dimensions to the micro scale Wear of hard and superhard materials Wear of materials in the earthmoving minerals processing and mining industries
