Valuing Health for Regulatory Cost-Effectiveness Analysis Institute of Medicine, Board on Health Care Services, Committee to Evaluate Measures of Health Benefits for Environmental, Health, and Safety Regulation, 2006-05-28 Promoting human health and safety by reducing exposures to risks and harms through regulatory interventions is among the most important responsibilities of the government. Such efforts encompass a wide array of activities in many different contexts: improving air and water quality, safeguarding the food supply, reducing the risk of injury on the job, in transportation and from consumer products, and minimizing exposure to toxic chemicals. Estimating the magnitude of the expected health and longevity benefits and reductions in mortality, morbidity, and injury risks helps policy makers decide whether particular interventions merit the expected costs associated with achieving these benefits and inform their choices among alternative strategies. *Valuing Health for Regulatory Cost Effectiveness Analysis* provides useful recommendations for how to measure health-related quality of life impacts for diverse public health safety and environmental regulations. Public decision makers, regulatory analysts, scholars, and students in the field will find this an essential review text. It will become a standard reference for all government agencies and those consultants and contractors who support the work of regulatory programs.

Assessing the Value of Community-Based Prevention Institute of Medicine, Board on Population Health and Public Health Practice, Committee on Valuing Community-Based, Non-Clinical Prevention Policies and Wellness Strategies, 2012-11-29

During the past century the major causes of morbidity and mortality in the United States have shifted from those related to communicable diseases to those due to chronic diseases. Just as the major causes of morbidity and mortality have changed so too has the understanding of health and what makes people healthy or ill. Research has documented the importance of the social determinants of health for example socioeconomic status and education that affect health directly as well as through their impact on other health determinants such as risk factors. Targeting interventions toward the conditions associated with today's challenges to living a healthy life requires an increased emphasis on the factors that affect the current cause of morbidity and mortality factors such as the social determinants of health. Many community based prevention interventions target such conditions. Community based prevention interventions offer three distinct strengths. First because the intervention is implemented population wide it is inclusive and not dependent on access to a health care system. Second by directing strategies at an entire population an intervention can reach individuals at all levels of risk. And finally some lifestyle and behavioral risk factors are shaped by conditions not under an individual's control. For example encouraging an individual to eat healthy food when none is accessible undermines the potential for successful behavioral change. Community based prevention interventions can be designed to affect environmental and social conditions that are out of the reach of clinical services. Four foundations the California Endowment the de Beaumont Foundation the W K Kellogg Foundation and the Robert Wood Johnson Foundation asked the Institute of Medicine to convene an expert committee to develop a framework for assessing the value of community based non clinical prevention policies and wellness strategies especially those targeting the prevention of long term chronic diseases. The charge to the committee was to define community based non clinical prevention policy and wellness strategies define the value for community based non clinical prevention policies and wellness strategies and analyze current frameworks used to assess the value of community based non clinical prevention policies and wellness strategies including the methodologies and measures used and the short and long term impacts of such prevention policy and wellness strategies on health care spending and public health. *An Integrated Framework for Assessing the Value of*

Community Based Prevention summarizes the committee's findings. **Essentials of Public Health Ethics** Ruth Gaare Bernheim, James F. Childress, Alan Melnick, Richard J Bonnie, 2013-11-27 As threats of infectious disease grow and the nation confronts chronic health problems such as diabetes and obesity health professionals citizens and community stakeholders must address increasingly complex ethical conflicts about public health policies and practices. *Essentials of Public Health Ethics* introduces students to the field of public health ethics by focusing on cases. Topics span the discipline of public health and integrate materials concepts and frameworks from numerous fields in public health such as health promotion environmental health and health policy. By delving into both historical and contemporary cases including international cases

the authors investigate the evolution and impact of various understandings of the concept of the public over time i e the public not only as a numerical population that can be defined and measured but also as a political group with legally defined obligations and relationships as well as diverse cultural and moral understandings While the text examines a range of philosophical theories and contemporary perspectives it is written in a way that presupposes no previous exposure to the philosophical concepts but at the same time provides challenging cases for students who do have more advanced knowledge Thus the book should be useful in Schools and Programs in Public Health as well as for undergraduate public health courses in liberal arts institutions and for health sciences students at the advanced undergraduate and graduate levels Advancing the Power of Economic Evidence to Inform Investments in Children, Youth, and Families National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on the Use of Economic Evidence to Inform Investments in Children, Youth, and Families, 2016-07-25 In recent years the U S federal government has invested approximately 463 billion annually in interventions that affect the overall health and well being of children and youth while state and local budgets have devoted almost double that amount The potential returns on these investments may not only be substantial but also have long lasting effects for individuals and succeeding generations of their families Ideally those tasked with making these investments would have available to them the evidence needed to determine the cost of all required resources to fully implement and sustain each intervention the expected returns of the investment to what extent these returns can be measured in monetary or nonmonetary terms and who will receive the returns and when As a result of a number of challenges however such evidence may not be effectively produced or applied Low quality evidence and or a failure to consider the context in which the evidence will be used may weaken society s ability to invest wisely and also reduce future demand for this and other types of evidence Advancing the Power of Economic Evidence to Inform Investments in Children Youth and Families highlights the potential for economic evidence to inform investment decisions for interventions that support the overall health and well being of children youth and families This report describes challenges to the optimal use of economic evidence and offers recommendations to stakeholders to promote a lasting improvement in its quality utility and use **Future Directions for the National Healthcare Quality and Disparities Reports** Institute of Medicine, Board on Health Care Services, Committee on Future Directions for the National Healthcare Quality and Disparities Reports, 2010-09-10 As the United States devotes extensive resources to health care evaluating how successfully the U S system delivers high quality high value care in an equitable manner is essential At the request of Congress the Agency for Healthcare Research and Quality AHRQ annually produces the National Healthcare Quality Report NHQR and the National Healthcare Disparities Report NHDR The reports have revealed areas in which health care performance has improved over time but they also have identified major shortcomings After five years of producing the NHQR and NHDR AHRQ asked the IOM for guidance on how to improve the next generation of

reports The IOM concludes that the NHQR and NHDR can be improved in ways that would make them more influential in promoting change in the health care system In addition to being sources of data on past trends the national healthcare reports can provide more detailed insights into current performance establish the value of closing gaps in quality and equity and project the time required to bridge those gaps at the current pace of improvement *Environmental Decisions in the Face of Uncertainty* Institute of Medicine,Board on Population Health and Public Health Practice,Committee on Decision Making Under Uncertainty,2013-06-20 The U S Environmental Protection Agency EPA is one of several federal agencies responsible for protecting Americans against significant risks to human health and the environment As part of that mission EPA estimates the nature magnitude and likelihood of risks to human health and the environment identifies the potential regulatory actions that will mitigate those risks and protect public health¹ and the environment and uses that information to decide on appropriate regulatory action Uncertainties both qualitative and quantitative in the data and analyses on which these decisions are based enter into the process at each step As a result the informed identification and use of the uncertainties inherent in the process is an essential feature of environmental decision making EPA requested that the Institute of Medicine IOM convene a committee to provide guidance to its decision makers and their partners in states and localities on approaches to managing risk in different contexts when uncertainty is present It also sought guidance on how information on uncertainty should be presented to help risk managers make sound decisions and to increase transparency in its communications with the public about those decisions Given that its charge is not limited to human health risk assessment and includes broad questions about managing risks and decision making in this report the committee examines the analysis of uncertainty in those other areas in addition to human health risks *Environmental Decisions in the Face of Uncertainty* explains the statement of task and summarizes the findings of the committee *Strengthening Benefit-Cost Analysis for Early Childhood Interventions* Institute of Medicine,National Research Council,Division of Behavioral and Social Sciences and Education,Board on Children, Youth, and Families,Committee on Strengthening Benefit-Cost Methodology for the Evaluation of Early Childhood Interventions,2009-12-18 The deficiencies that many children experience from birth to school age in health care nutrition emotional support and intellectual stimulation for example play a major role in academic achievement gaps that persist for years as well as in behavior and other problems There are many intervention programs designed to strengthen families provide disadvantaged children with the critical elements of healthy development and prevent adverse experiences that can have lasting negative effects In a climate of economic uncertainty and tight budgets hard evidence not only that such interventions provide lasting benefits for children their families and society but also that the benefits translate into savings that outweigh the costs is an extremely important asset in policy discussions Convincing analysis of benefits and costs would provide a guide to the best ways to spend scarce resources for early childhood programs Benefit Cost Analysis for Early Childhood Interventions summarizes a workshop that was held to explore ways to strengthen benefit cost analysis

so it can be used to support effective policy decisions This book describes the information and analysis that were presented at the workshop and the discussions that ensued
