Variational and Hemivariational Inequalities - Theory, Methods and Applications D. Goeleven, Dumitru Motreanu, 2013-12-11 This book includes a self contained theory of inequality problems and their applications to unilateral mechanics Fundamental theoretical results and related methods of analysis are discussed on various examples and applications in mechanics The work can be seen as a book of applied nonlinear analysis entirely devoted to the study of inequality problems i e variational inequalities and hemivariational inequalities in mathematical models and their corresponding applications to unilateral mechanics It contains a systematic investigation of the interplay between theoretical results and concrete problems in mechanics It is the first textbook including a comprehensive and systematic study of both elliptic parabolic and hyperbolic inequality models dynamical unilateral systems and unilateral eigenvalues problems The book is self contained and it offers for the first time the possibility to learn about inequality models and to acquire the essence of the theory in a relatively short time Audience The book is suitable for researchers and for doctoral and post doctoral courses

Multi-Valued Variational Inequalities and Inclusions Siegfried Carl, Vy Khoi Le, 2021-03-02 This book focuses on a large class of multi valued variational differential inequalities and inclusions of stationary and evolutionary types with constraints reflected by subdifferentials of convex functionals Its main goal is to provide a systematic unified and relatively self contained exposition of existence comparison and enclosure principles together with other qualitative properties of multi valued variational inequalities and inclusions The problems under consideration are studied in different function spaces such as Sobolev spaces Orlicz Sobolev spaces Sobolev spaces with variable exponents and Beppo Levi spaces A general and comprehensive sub supersolution method lattice method is developed for both stationary and evolutionary multi valued variational inequalities which preserves the characteristic features of the commonly known sub supersolution method for single valued quasilinear elliptic and parabolic problems This

method provides a powerful tool for studying existence and enclosure properties of solutions when the coercivity of the problems under consideration fails. It can also be used to investigate qualitative properties such as the multiplicity and location of solutions or the existence of extremal solutions. This is the first in depth treatise on the sub supersolution lattice method for multi valued variational inequalities without any variational structures together with related topics. The choice of the included materials and their organization in the book also makes it useful and accessible to a large audience consisting of graduate students and researchers in various areas of Mathematical Analysis and Theoretical Physics.

Variational and Non-variational Methods in Nonlinear Analysis and Boundary Value Problems Dumitru Motreanu, Vicentiu D.

Radulescu, 2013-06-29 This book reflects a significant part of authors research activity during the last ten years. The present monograph is constructed on the results obtained by the authors through their direct cooperation or due to the authors separately or in cooperation with other mathematicians. All these results fit in a unitary scheme giving the structure of this work. The book is mainly addressed to researchers and scholars in Pure and Applied Mathematics, Mechanics, Physics and Engineering. We are greatly indebted to Viorica Venera Motreanu for the careful reading of the manuscript and helpful comments on important issues. We are also grateful to our Editors of Kluwer Academic Publishers for their professional assistance. Our deepest thanks go to our numerous scientific collaborators and friends whose work was so important for us. D. Motreanu and V. Radulescu.

IX Introduction The present monograph is based on original results obtained by the authors in the last decade. This book provides a comprehensive exposition of some modern topics in nonlinear analysis with applications to the study of several classes of boundary value problems. Our framework includes multivalued elliptic problems with discontinuities, variational inequalities, hemivariational inequalities and evolution problems. The treatment relies on variational methods, monotonicity principles, topological arguments and optimization techniques. Excepting Sections 1 and 3 in Chapter 1 and Sections 1 and 3 in Chapter 2, the material is new in comparison with any other book representing research topics where the authors contributed. The outline of our work is the following.

Constructive Nonsmooth Analysis and Related Topics Vladimir F. Demyanov, Panos M. Pardalos, Mikhail Batsyn, 2013-11-12 This volume contains a collection of papers based on lectures and presentations delivered at the International Conference on Constructive Nonsmooth Analysis CNSA held in St Petersburg, Russia from June 18-23, 2012. This conference was organized to mark the 50th anniversary of the birth of nonsmooth analysis and nondifferentiable optimization and was dedicated to J. J. Moreau and the late B. N. Pshenichnyi, A. M. Rubinov and N. Z. Shor whose contributions to NSA and NDO remain invaluable. The first four chapters of the book are devoted to the theory of nonsmooth analysis. Chapters 5-8 contain new results in nonsmooth mechanics and calculus of variations. Chapters 9-13 are related to nondifferentiable optimization and the volume concludes with four chapters containing interesting and important historical chapters including tributes to three giants of nonsmooth analysis: convexity and optimization, Alexandr Alexandrov, Leonid Kantorovich and Alex Rubinov. The last chapter provides an overview and

important snapshots of the 50 year history of convex analysis and optimization

Advances in Mechanics and Mathematics David Yang Gao, Raymond W. Ogden, 2013-11-11 Advances in Mechanics and Mathematics AMMA is intended to bridge the gap by providing multi disciplinary publications This volume AMMA 2002 includes two parts with three articles by four subject experts Part 1 deals with nonsmooth static and dynamic systems A systematic mathematical theory for multibody dynamics with unilateral and frictional constraints and a brief introduction to hemivariational inequalities together with some new developments in nonsmooth semi linear elliptic boundary value problems are presented Part 2 provides a comprehensive introduction and the latest research on dendritic growth in fluid mechanics one of the most profound and fundamental subjects in the area of interfacial pattern formation a commonly observed phenomenon in crystal growth and solidification processes

Computational Mathematics and Variational Analysis Nicholas J. Daras, Themistocles M. Rassias, 2020-06-06 This volume presents a broad discussion of computational methods and theories on various classical and modern research problems from pure and applied mathematics Readers conducting research in mathematics engineering physics and economics will benefit from the diversity of topics covered Contributions from an international community treat the following subjects calculus of variations optimization theory operations research game theory differential equations functional analysis operator theory approximation theory numerical analysis asymptotic analysis and engineering Specific topics include algorithms for difference of monotone operators variational inequalities in semi inner product spaces function variation principles and normed minimizers equilibria of parametrized N player nonlinear games multi symplectic numerical schemes for differential equations time delay multi agent systems computational methods in non linear design of experiments unsupervised stochastic learning asymptotic statistical results global local transformation scattering relations of elastic waves generalized Ostrowski and trapezoid type rules numerical approximation Sz sz Durrmeyer operators and approximation integral inequalities behaviour of the solutions of functional equations functional inequalities in complex Banach spaces functional contractions in metric spaces

Essays in Mathematics and its Applications Themistocles M. Rassias, Panos M. Pardalos, 2016-06-14 This volume dedicated to the eminent mathematician Vladimir Arnold presents a collection of research and survey papers written on a large spectrum of theories and problems that have been studied or introduced by Arnold himself Emphasis is given to topics relating to dynamical systems stability of integrable systems algebraic and differential topology global analysis singularity theory and classical mechanics A number of applications of Arnold s groundbreaking work are presented This publication will assist graduate students and research mathematicians in acquiring an in depth understanding and insight into a wide domain of research of an interdisciplinary nature

Applied Mathematics in Tunisia Aref Jeribi, Mohamed Ali Hammami, Afif Masmoudi, 2015-10-05 This contributed volume presents some recent theoretical advances in mathematics and its applications in various areas of science and technology Written by internationally recognized scientists and researchers the chapters in this book are based on talks given at the International

Conference on Advances in Applied Mathematics ICAAM which took place December 16-19, 2013 in Hammamet, Tunisia. Topics discussed at the conference included spectral theory, operator theory, optimization, numerical analysis, ordinary and partial differential equations, dynamical systems, control theory, probability and statistics. These proceedings aim to foster and develop further growth in all areas of applied mathematics.

Nonlinear Analysis and Variational Problems Panos M. Pardalos, Themistocles M. Rassias, Akhtar A. Khan, 2009-10-20. The chapters in this volume, written by international experts from different fields of mathematics, are devoted to honoring George Isac, a renowned mathematician. These contributions focus on recent developments in complementarity theory, variational principles, stability theory, theory of functional equations, nonsmooth optimization, and several other important topics at the forefront of nonlinear analysis and optimization.
