Wildlife Management and Landscapes William F. Porter, Chad J. Parent, Rosemary A. Stewart, David M. Williams, 2021-05-11 Wildlife management specialists and landscape ecologists offer a new perspective on the important intersection of these fields in the twenty first century It s been clear for decades that landscape level patterns and processes along with the tenets and tools of landscape ecology are vitally important in understanding wildlife habitat relationships and sustaining wildlife populations Today significant shifts in the spatial scale of extractive agricultural ranching and urban land uses are upon us making it more important than ever before to connect wildlife management and landscape ecology Landscape ecologists must understand the constraints that wildlife managers face and be able to use that knowledge to translate their work into more practical applications Wildlife managers for their part can benefit greatly from becoming comfortable with the vocabulary conceptual processes and perspectives of landscape ecologists In Wildlife Management and Landscapes the foremost landscape ecology experts and wildlife management specialists come together to discuss the emerging role of landscape concepts in habitat management Their contributions make the case that a landscape perspective is necessary to address management questions translate concepts

in landscape ecology to wildlife management explain why studying some important habitat wildlife relationships is still inherently difficult explore the dynamic and heterogeneous structure of natural systems reveal why factors such as soil hydrology fire grazing and timber harvest lead to uncertainty in management decisions explain matching scale between population processes and management discuss limitations to management across jurisdictional boundaries and balancing objectives of private landowners and management agencies offer practical ideas for improving communication between professionals outline the impediments that limit a full union of landscape ecology and wildlife management Using concrete examples of modern conservation challenges that range from oil and gas development to agriculture and urbanization the volume posits that shifts in conservation funding from a hunter constituent base to other sources will bring a dramatic change in the way we manage wildlife Explicating the foundational similarity of wildlife management and landscape ecology Wildlife and Landscapes builds crucial bridges between theoretical and practical applications Contributors Jocelyn L Aycrigg Guillaume Bastille Rousseau Jon P Beckmann Joseph R Bennett William M Block Todd R Bogenschutz Teresa C Cohn John W Connelly Courtney J Conway Bridgett E Costanzo David D Diamond Karl A Didier Lee F Elliott Michael E Estey Lenore Fahrig Cameron J Fiss Jacqueline L Frair Elsa M Haubold Fidel Hernandez Jodi A Hilty Joseph D Holbrook Cynthia A Jacobson Kevin M Johnson Jeffrey K Keller Jeffery L Larkin Kimberly A Lisgo Casey A Lott Amanda E Martin James A Martin Darin J McNeil Michael L Morrison Betsy E Neely Neal D Niemuth Chad J Parent Humberto L Perotto Baldivieso Ronald D Pritchert Fiona K A Schmiegelow Amanda L Sesser Gregory J Soulliere Leona K Svancara Stephen C Torbit Joseph A Veech Kerri T Vierling Greg Wathen David M Williams Mark J Witecha John M Yeiser

Applications for Advancing Animal Ecology Michael L. Morrison, Leonard A. Brennan, Bruce G. Marcot, William M. Block, Kevin S. McKelvey, 2021-05-11 Practical guidance for wildlife professionals working to improve study design data analysis and the application of results to habitat and population management Winner of the Wildlife Society Publications Book Award by The Wildlife Society Despite major advances in sampling techniques and analytical methods many animal ecologists conduct research that is primarily relevant to a specific time and place They also tend to focus more on the statistical analyses and nuances of modeling than actual study design Arguing that studies of animal ecology should always begin with a focus on the behaviors and characteristics of individual organisms including how they form into distinct biological populations Applications for Advancing Animal Ecology takes a fresh and critical look at the field Building from its companion volume Foundations for Advancing Animal Ecology this practical book presents readers with the principal methods used to observe animal behavior Teaching them to assess resource abundance categories of species environmental relationships models it also explores major aspects of measuring animal habitat what to measure and how to measure it common sampling and estimation methods to assess population parameters when to measure and how to analyze data problems that will confront ecologists in the coming years and how to gather information to adequately address them and how the experimental approach can be used to advance the science of

animal ecology Throughout the book the authors stress the importance of speaking a common and well defined language Avoiding vague and misleading terminology they assert will help ecologists translate science into meaningful and lasting actions in the environment Taking the perspective of the organism of interest in developing concepts and applications the authors always keep the potentially biased human perspective in focus They also provide a selection of suggested research projects cautions and caveats A major advancement in understanding the factors underlying wildlife habitat relationships Applications for Advancing Animal Ecology will be an invaluable resource to natural resource management professionals and practitioners including state and federal agencies non governmental organizations and environmental consultants *Deer Management for Forest Landowners and Managers* David S. DeCalesta, Michael C. Eckley, 2019-04-17 This book is designed to help landowners and forestry professionals develop implement and monitor programs to manage both deer and forests with emphasis on resolving deer impact issues Chapters cover management strategies through identifying and setting goals managing deer populations and deer impact on land economics of forest deer and impact management human dimensions of deer management and developing and implementing integrated management plans The book presents an integrated quantitative approach for managing deer populations and impacts so users can manage forest resources sustainably **The Wildlife Techniques Manual** Nova J. Silvy, 2020-07-28 The 1 selling wildlife management book for 40 years now updated for the next generation of professionals and students Since its original publication in 1960 The Wildlife Techniques Manual has remained the cornerstone text for the professional wildlife biologist Now fully revised and updated this eighth edition promises to be the most comprehensive resource on wildlife biology conservation and management for years to come Superbly edited by Nova J Silvy and published in association with The Wildlife Society the 50 authoritative chapters included in this work provide a full synthesis of methods used in the field and laboratory Chapter authors all leading wildlife professionals explain and critique traditional and new methodologies and offer thorough discussions of a wide range of relevant topics To effectively incorporate the explosion of new information in the wildlife profession this latest edition is logically organized into a 2 volume set Volume 1 is devoted to research techniques and Volume 2 focuses on pragmatic management methodologies Volume 1 describes research design and proper analytic methods prior to conducting research as well as methods and considerations for capturing and handling wild animals and information on identification and marking of captured animals It also includes new chapters on nutritional research and field sign identification and on emerging topics including structured decision making Finally Volume 1 addresses measurements of wildlife abundance and habitat and research on individual animals Volume 2 begins with a section on the relationship between research and management including public outreach described in a context that encourages engagement prior to initiation of management An adaptive management approach is described as a cornerstone of natural resource management followed by a section on managing landscapes and wildlife populations The volume also includes new chapters on ethics in wildlife science and conservation

conflict resolution and management and land reclamation A standard text in a variety of courses the Techniques Manual as it is commonly called covers every aspect of modern wildlife management and provides practical information for applying the hundreds of methods described in its pages This deft and thorough update ensures that The Wildlife Techniques Manual will remain an indispensable resource one that professionals and students in wildlife biology conservation and management simply cannot do without **Renewable Energy and Wildlife Conservation** Christopher E. Moorman, Steven M.

Grodsky, Susan Rupp, 2019-09-10 Brings together disparate conversations about wildlife conservation and renewable energy suggesting ways these two critical fields can work hand in hand Renewable energy is often termed simply green energy but its effects on wildlife and other forms of biodiversity can be quite complex While capturing renewable resources like wind solar and energy from biomass can require more land than fossil fuel production potentially displacing wildlife habitat renewable energy infrastructure can also create habitat and promote species health when thoughtfully implemented The authors of Renewable Energy and Wildlife Conservation argue that in order to achieve a balanced plan for addressing these two crucially important sustainability issues our actions at the nexus of these fields must be directed by current scientific information related to the ecological effects of renewable energy production Synthesizing an extensive rapidly growing base of research and insights from practitioners into a single comprehensive resource contributors to this volume describe processes to generate renewable energy focusing on the Big Four renewables wind bioenergy solar energy and hydroelectric power review the documented effects of renewable energy production on wildlife and wildlife habitats consider current and future policy directives suggesting ways industrial scale renewables production can be developed to minimize harm to wildlife populations explain recent advances in renewable power technologies identify urgent research needs at the intersection of renewables and wildlife conservation Relevant to policy makers and industry professionals many of whom believe renewables are the best path forward as the world seeks to meet its expanding energy needs and wildlife conservationists many of whom are alarmed at the rate of renewables related habitat conversion this detailed book culminates with a chapter underscoring emerging opportunities in renewable energy ecology Contributors Edward B Arnett Brian B Boroski Regan Dohm David Drake Sarah R Fritts Rachel Greene Steven M Grodsky Amanda M Hale Cris D Hein Rebecca R Hernandez Jessica A Homyack Henriette I Jager Nicole M Korfanta James A Martin Christopher E Moorman Clint Otto Christine A Ribic Susan P Rupp Jake Verschuyt Lindsay M Wickman T Bently Wigley Victoria H Zero Ecology and Management of Black-tailed and Mule Deer of North America James R. Heffelfinger, Paul R. Krausman, 2023-04-27 Black tailed and mule deer represent one of the largest distributions of mammals in North America and are symbols of the wide open American West Each chapter in this book was authored by the world's leading experts on that topic Both editors James R Heffelfinger and Paul R Krausman are widely published in the popular and scientific press and recipients of the O C Wallmo Award given every two years to a leading black tailed and mule deer expert who has made significant contributions

to the conservation of this species In addition Heffelfinger has chaired the Mule Deer Working Group sponsored by the Western Association of Fish and Wildlife Agencies for more than 15 years This working group consists of the leading black tailed and mule deer experts from each of 24 states provinces and territories in western North America putting them at the forefront of all conservation and much of the research on this species The book represents all current knowledge available on these deer including how changing conditions such as fires habitat alteration and loss disease climate change socio economic forces energy development and other aspects are influencing their distribution and abundance now and into the future It takes a completely fresh look at all chapter topics The revisions of distribution taxonomy evolution behavior and new and exciting work being done in deer nutrition migration and movements diseases predation and human dimensions are all assembled in this volume This book will instantly become the foundation for the latest information and management strategies to be implemented on the ground by practitioners and to inform the public Although this book is about deer the topics discussed influence most terrestrial wildlife worldwide and the basic concepts in many of the chapters are applicable to other species Foundations for Advancing Animal Ecology Michael L. Marcot, William M. Block, Kevin S. McKelvey, 2020-10-13 A look at how wildlife professionals can modernize their approaches to habitat and population management with a fresh take on animal ecology How can we maximize the probability that a species of wild animal will persist into the future This audacious book proposes that advancing animal ecology and conservation itself demands that we reenvision our basic understanding of how animals interact with their environments and with each other Synthesizing where we are and where we need to go with our studies of animals and their environs Foundations for Advancing Animal Ecology asserts that studies of animal ecology should begin with a focus on the behaviors and characteristics of individual organisms The book examines the limitations of classic approaches to the study of animal ecology how organisms organize into collections such as breeding pairs flocks and herds how the broader biotic and abiotic environment shapes animal populations communities and ecosystems factors underlying the distribution and abundance of species through space and time the links between habitat and population why communication between researchers and managers is key specific strategies for managing wild animal populations and habitats in an evolutionary and ecosystem context Throughout the authors stress the importance of speaking a common and well defined language Avoiding vague and misleading terminology they argue will help ecologists translate science into meaningful and lasting actions in the environment Taking the perspective of the organism of interest in developing concepts and applications the authors always keep the potentially biased human perspective in focus A major advancement in understanding the factors underlying wildlife habitat relationships Foundations for Advancing Animal Ecology will be an invaluable resource to professionals and practitioners in natural resource management in public and private sectors including state and federal agencies non governmental organizations and environmental consultants A Review of the Landscape Conservation Cooperatives

National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Board on Atmospheric Sciences and Climate, Committee on the Evaluation of the Landscape Conservation Cooperatives, 2016-10-28 The United States tradition of conserving fish wildlife habitats and cultural resources dates to the mid 19th century States have long sought to manage fish and wildlife species within their borders whereas many early federal conservation efforts focused on setting aside specific places as parks sanctuaries or reserves With advances in landscape ecology over the past quarter century conservation planners scientists and practitioners began to stress the importance of conservation efforts at the scale of landscapes and seascapes These larger areas were thought to harbor relatively large numbers of species that are likely to maintain population viability and sustain ecological processes and natural disturbance regimes often considered critical factors in conserving biodiversity By focusing conservation efforts at the level of whole ecosystems and landscape practitioners can better attempt to conserve the vast majority of species in a particular ecosystem Successfully addressing the large scale interlinked problems associated with landscape degradation will necessitate a planning process that bridges different scientific disciplines and across sectors as well as an understanding of complexity uncertainty and the local context of conservation work The landscape approach aims to develop shared conservation priorities across jurisdictions and across many resources to create a single collaborative conservation effort that can meet stakeholder needs Conservation of habitats species ecosystem services and cultural resources in the face of multiple stressors requires governance structures that can bridge the geographic and jurisdictional boundaries of the complex socio ecological systems in which landscape level conservation occurs The Landscape Conservation Cooperatives LCC Network was established to complement and add value to the many ongoing state tribal federal and nongovernmental efforts to address the challenge of conserving species habitats ecosystem services and cultural resources in the face of large scale and long term threats including climate change A Review of the Landscape Conservation Cooperatives evaluates the purpose goals and scientific merits of the LCC program within the context of similar programs and whether the program has resulted in measurable improvements in the health of fish wildlife and their habitats **Wildlife and Wind Farms -**
