### **Value Waste Construction Fidelis Emuze:**

**Value and Waste in Lean Construction** Fidelis A. Emuze, Tarcisio A. Saurin, 2015-11-06 Non value adding activities are otherwise known as waste in the lean construction lexicon. The aim of this collection is to build a common understanding of the role and contribution of value adding activities in achieving stipulated objectives and continuous improvement in construction projects and to contrast this with waste. Although the lean approach to construction projects has been widely covered, this is the first book that explicitly provides the link between value and waste in the Architecture Engineering and Construction AEC sector. This internationally researched collection seeks to create a paradigm shift which will shape work processes and future directions for how value is conceptualized and operationalized in both the project management and business aspects of construction. The readers will gain an understanding of the value adding paradigm in construction. How to make value supporting decisions. Waste identification and control in practice. With contributions from South Africa, Brazil, Norway, and the USA, the implications of this book are globally relevant. This is essential reading for all higher level students of construction management and economics and all professionals interested in value management.

**Training-Within-Industry Job Programs for Improved Construction Safety** Lesiba Mollo, Fidelis Emuze, John Smallwood, 2023-10-06 The purpose of this book is to demonstrate how a Training Within Industry (TWI) Job Program could reduce human factor related harm in construction. The construction industry has a significant impact on issues relating to the health, safety, and well-being (HSW) of people in the workforce. It is important to acknowledge that workers' behaviour influences the safety management system (SMS) of construction projects either negatively or positively and that it is important for a management team to identify relevant behaviours and take appropriate action to solve problems. In most cases, accidents happen because of the results of human failure in the form of errors, violations, and system failures. Human failure causes accidents and site management needs to reduce hazards that might cause such errors, violations, and system failures on worksites. The chapters in the book address factors causing human failure on construction sites, how to mitigate errors and violations through SMS, and learning by doing and improving practice of using safety instructors on sites. The book closes with insights from a TWI informed human failure reduction framework. This book provides valuable insights into safety management in a construction site context that can be applied to other areas. It is essential reading for safety managers, construction managers, researchers, and advanced students.
