The Eponym Dictionary of Birds Bo Beolens, Michael Watkins, Michael Grayson, 2014-08-28 Birdwatchers often come across bird names that include a person's name either in the vernacular English name or latinised in the scientific nomenclature Such names are properly called eponyms and few people will not have been curious as to who some of these people were or are Names such as Darwin Wallace Audubon Gould and Gilbert White are well known to most people Keener birders will have yearned to see Pallas's Warbler Hume's Owl Swainson's Thrush Steller's Eider or Brunnich's Guillemot But few people today will have even heard of Albertina's Myna Barraband's Parrot Guerin's Helmetcrest or Savigny's Eagle Owl This extraordinary new work lists more than 4 000 eponymous names covering 10 000 genera species and subspecies of birds Every taxon with an eponymous vernacular or scientific name whether in current usage or not is listed followed by a concise biography of the person concerned These entries vary in length from a few lines to several paragraphs depending on the availability of information or the importance of the individual's legacy The text is punctuated with intriguing or little known facts unearthed in the course of the authors' extensive research Ornithologists will find this an invaluable reference especially to sort out birds named after people with identical surnames or in situations where only a person's forenames are used But all birders will find much of interest in this fascinating dictionary an ebook to dip into time and time again whenever their curiosity is aroused

The Eponym Dictionary of Amphibians Bo Beolens, Michael Watkins, Michael Grayson, 2013-04-22 New species of animal and plant are being discovered all the time When this happens the new species has to be given a scientific Latin name in addition to any common vernacular name In either case the species may be named after a person often the discoverer but sometimes an

individual they wished to honour or perhaps were staying with at the time the discovery was made Species names related to a person are eponyms Many scientific names are allusive esoteric and even humorous so an eponym dictionary is a valuable resource for anyone amateur or professional who wants to decipher the meaning and glimpse the history of a species name Sometimes a name refers not to a person but to a fictional character or mythological figure The Forest Stubfoot Toad *Atelopus farci* is named after the FARC a Colombian guerrilla army who found refuge in the toad's habitat and thereby it is claimed protected it Hoipollo's Bubble nest Frog *Pseudophilautus hoipolloi* was named after the Greek for the many but someone assumed the reference was to a Dr Hoipollo Meanwhile the man who has everything will never refuse an eponym Sting's Treefrog *Dendropsophus stingi* is named after the rock musician in honour of his commitment and efforts to save the rainforest Following the success of their Eponym Dictionary of Reptiles the authors have joined forces to give amphibians a similar treatment They have tracked down 1 609 honoured individuals and composed for each a brief pithy biography In some cases these are a reminder of the courage of scientists whose dedicated research in remote locations exposed them to disease and even violent death The eponym ensures that their memory will survive aided by reference works such as this highly readable dictionary Altogether 2 668 amphibians are listed
