Kate Gibson

Wiltshire Marriage Patterns 1754 1914 Geographical Mobility Cousin Marriage And Illegitimacy:

Wiltshire Marriage Patterns 1754-1914 Cathy Day, 2014-09-26 This is the first study to use pedigrees of a mainstream English population to determine cousin marriage rates amongst ordinary labourers tradesmen and farmers and to demonstrate the association between cousin marriage occupation religious affiliation geographical mobility and illegitimate reproductive experience Using birthplace rather than place of residence it shows the geographical source of spouses their parents and grandparents The marriage prospects of parents of illegitimate children and the children themselves are described along with the association between being the mother of an illegitimate child and both low geographical mobility and high rates of cousin marriage

Illegitimacy, Family, and Stigma in England, 1660-1834 Kate Gibson, 2022-07-21 Illegitimacy Family and Stigma is the first full length exploration of what it was like to be illegitimate in eighteenth century England a period of sexual revolution unprecedented increase in illegitimate births and intense debate over children s rights to state support Using the words of illegitimate individuals and their families preserved in letters diaries poor relief and court documents this study reveals the impact of illegitimacy across the life cycle How did illegitimacy affect children s early years and their relationships with parents siblings and wider family as they grew up Did illegitimacy limit education occupation or marriage chances What were individuals experiences of shame and stigma and how did being illegitimate affect their sense of identity Historian Kate Gibson investigates the circumstances that governed families responses from love and pragmatic acceptance to secrecy and exclusion In a major reframing of assumptions that illegitimacy was experienced only among the poor this volume tells the stories of individuals from across the socio economic scale including children of royalty physicians and lawyers servants and agricultural labourers It demonstrates that the stigma of illegitimacy operated along a spectrum varying according to the type of parental relationship the child s race gender and socio economic status Financial resources and the class based ideals of parenthood or family life had a significant impact on how families reacted to illegitimacy Class became more important over the eighteenth century under the influence of Enlightenment ideals of tolerance sensibility and redemption The child of sin was now recast as a pitiable object of charity but this applied only to those who could fit narrow parameters of genteel tragedy This vivid investigation of the meaning of illegitimacy gets to the heart of powerful inequalities in families communities and the state

Marriage Patterns in Two Wiltshire Parishes 1754-1914 Catherine Linley Day, 2010 The aim of this project was to determine the birthplaces of spouses married in two parishes in England how many married their relatives and how illegitimacy affected marital outcomes for all concerned It considered the effect of religion and social class on the marital aspects of geographic mobility consanguinity and illegitimacy This project used a wide array of primary documentary sources that have recently become widely available to construct a database of over 22 000 individuals who lived in southwest Wiltshire in the 18th 19th and 20th centuries The author arranged the individuals in family groups and traced pedigrees for several generations Information was included on religious affiliation occupation and

other variables enabling the researcher to consider aspects of marital choices It quantified separately the level of geographical mobility consanguinity and illegitimacy and then was able to consider the linkages between these aspects of marriage patterns Geographical mobility calculated from birthplace was higher than estimates derived from residence prior to marriage Catholics were found to be more inbred than Anglicans despite having a lower level of 1st cousin marriage Social class influenced consanguinity as did illegitimate reproductive experience and geographical mobility Mothers of illegitimate children were less mobile than other women and more likely to marry their cousins Family experience particularly that of siblings influenced illegitimacy and consanguinity rates The interactions between geographical mobility consanguinity and illegitimacy were complex and acted differently depending on social class Members of higher social classes such as farmers had greater geographical mobility and higher levels of consanguinity whereas amongst labourers consanguineous marriage was associated with lower levels of geographical mobility There was an association between being the mother of an illegitimate child and consanguineous marriage but only amongst the labouring class
