Ultimate Explanations Of The Universe:

Ultimate Explanations of the Universe Michael Heller, 2009 Ultimate Explanations of the Universe Michael Heller, 2009-11-12 We humans are collectively driven by a powerful yet not fully explained instinct to understand We would like to see everything established proven laid bare The more important an issue the more we desire to see it clarified stripped of all secrets all shades of gray What could be more important than to understand the Universe and ourselves as a part of it To find a window onto our origin and our destiny This book examines how far our modern cosmological theories with their sometimes audacious models such as inflation cyclic histories quantum creation parallel universes can take us towards answering these questions Can such theories lead us to ultimate truths leaving nothing unexplained Last but not least Heller addresses the thorny problem of why and whether we should expect to find theories with all encompassing explicative power

Theism and Ultimate Explanation Timothy O'Connor, 2012-02-20 An expansive yet succinct analysis of the Philosophy of Religion from metaphysics through theology Organized into two sections the text first examines truths concerning what is possible and what is necessary These chapters lay the foundation for the book's second part the search for a metaphysical framework that permits the possibility of an ultimate explanation that is correct and complete A cutting edge scholarly work which engages with the traditional metaphysician's quest for a true ultimate explanation of the most general features of the world we inhabit Develops an original view concerning the epistemology and metaphysics of modality or truths concerning what is possible or necessary Applies this framework to a re-examination of the cosmological argument for theism Defends a novel version of the Leibnizian cosmological argument

God, Purpose, and Reality John Christopher Bishop, Kenneth J. Perszyk, 2023 John Bishop and Ken Perszyk argue that it is reasonable to reject the standard conception of a personal omniGod They present an alternative view euteleology reality is inherently purposive and the universe exists ultimately because its overall end which is the supreme good is made concretely real within it

God in the Age of Science? Herman Philipse, 2012-02-23 Herman Philipse puts forward a powerful new critique of belief in God He examines the strategies that have been used for the philosophical defence of religious belief and by careful reasoning casts doubt on the legitimacy of relying on faith instead of evidence and on probabilistic arguments for the existence of God

The Death of Classical Theism and the Subsequent Rise of Atheism Shane Himes, 2025-03-18 Modernity has seen the rise of atheism and a rejection of classical theism In this book Shane Himes argues that the two realities are largely dependent on one another Many modern Christian apologists are not fond of classical doctrines such as divine simplicity and impassibility and thus they happily reject these ideas The ramifications of doing so however have not been fully appreciated especially as they relate to Christian arguments for God's existence Himes gives an overview of the arguments for God's existence by examining the work of both scholars who reject classical theism and those who embrace it An analysis of these arguments demonstrates that modern models of God make his existence a mere possibility as opposed to a logical necessity

As such the arguments given by these scholars leave them susceptible to atheist critiques given that they do not answer the question of why anything exists Without classical theism God becomes one possible answer as to why our particular universe exists the way that it does but apparently this has not been convincing to many as atheism has seen an unprecedented rise in the last two centuries Paradoxically if Christianity is to become dominant once again in academia and Western societies more generally a recovery of classical depictions of God as the ground of all being is paramount

Mind ,1893 A quarterly review of philosophy

The International Quarterly ,1901

The Beginning and the End Clément Vidal,2014-05-16 In this fascinating journey to the edge of science Vidal takes on big philosophical questions Does our universe have a beginning and an end or is it cyclic Are we alone in the universe What is the role of intelligent life if any in cosmic evolution Grounded in science and committed to philosophical rigor this book presents an evolutionary worldview where the rise of intelligent life is not an accident but may well be the key to unlocking the universe s deepest mysteries Vidal shows how the fine tuning controversy can be advanced with computer simulations He also explores whether natural or artificial selection could hold on a cosmic scale In perhaps his boldest hypothesis he argues that signs of advanced extraterrestrial civilizations are already present in our astrophysical data His conclusions invite us to see the meaning of life evolution and intelligence from a novel cosmological framework that should stir debate for years to come
