Selected Papers in Phycology II James R. Rosowski,Bruce C. Parker,1982 *The Haptophyte Algae* J. C. Green,Barry S. C. Leadbeater,Systematics Association,1994 The planktonic algae known as the Haptophyta occur in all the world s oceans sometimes occurring in blooms so dense that they can be detected by satellites Some species produce sulphur compounds that may contribute to the problem of acid rain Others strongly affect the carbon dioxide balance between the ocean and the atmosphere thus becoming linked to the proposed greenhouse effect and others produce powerful poisons responsible for killing fish and other marine life This is the first book to deal comprehensively with this important group of unicellular

organisms and each chapter has been contributed by an expert in the field The topics covered include all major aspects of haptophyte biology including structure biochemistry ecology climatological and economic importance fossil record evolution and systematics □□□□□ , *The Cumulative Book Index* ,1995 A world list of books in the English language

Contributions to the Knowledge of Microalgae Particularly Diatoms Ursula Geissler,1990 *Indian Journal of Marine Sciences* ,1998 **Structure and Dynamics of the Benthic Boundary Layer Above the Hatteras Abyssal Plain** Eric Arthur D'Asaro,1981 The structure of the near bottom velocity and density fields was observed for 3 months with a fixed velocity temperature measuring array on the Hatteras Abyssal Plain The velocity signal was examined for structure coherent with the observed mixed layers Velocity fluctuations above 1 cph increase in energy near the bottom especially within bottom mixed layers The frequency and energy of these fluctuations is consistent with the expected properties of boundary layer turbulence The turbulence as measured by these velocity fluctuations is modulated on tidal and inertial time scales and extends intermittently throughout the bottom mixed layer The clockwise near inertial velocity fluctuations presumably due to internal waves also show structure coherent with the observed mixed layers Their energy decreases near the top of the mixed layer with little phase change Within the mixed layer the phase begins to lead with the phase increasing downward The near inertial anticlockwise velocity fluctuations show far less coherence with the mixed layer structure higher frequency internal wave band velocity fluctuations show very little coherence with the mixed layer structure The characteristic boundary layer velocity signal in both the high frequency and near inertial bands commonly extends throughout the mixed layer often significantly above the estimated turbulent Ekman layer height These observations are inconsistent with a steady turbulent Ekman layer model of the boundary layer Author **Russian Journal of Marine Biology** ,2007 Energy Research Abstracts ,1990
