Lee, 1998-01-01 *Chemical Engineering*, 2001 Materials World, 2002 **International Encyclopedia of Composites: Laminated plate analysis to molding, short-fiber composites** Stuart M. Lee, 1990 **Plastic Blow Molding Handbook** N.C. Lee, 1990-05-31 Over the years numerous handbooks and design guides on the subject of plastics have been published None of these dealt in any depth with the subject of this handbook blow molding The recent growth of blow molding as an economically feasible process has been rapid in many areas This growth coupled with the lack of technical publications relating to blow molding prompted the Board of Directors of the Blow Molding Division of the Society of Plastic Engineers to undertake the assimilation of available information and the editing of this milestone publication We believe that this Plastic Blow Molding Handbook will provide the

reader with a greater understanding of the unique process characteristics of blow molding enable the reader to apply proven techniques in developing new products and applications for blow molding and will serve as a valuable reference for all who are interested in the plastics industry Our thanks are heartily extended to the various authors for their contributions to this pioneering effort in blow molding J H Moran Chairman Blow Molding Division Society of Plastic Engineers xi Preface The blow molding of plastic articles has in the past had an aura of the mystic around it As a result little comprehensive work on the subject has been published Advances in the technology of polymeric materials machine controls computer science and management techniques have made it necessary to correct the myths and magic *Chemistry and Industry* ,1990

Plastics A. Brent Strong,2006 *International Polymer Processing* ,2004 *Developments in Plastics Technology* A. Whelan,J. L. Craft,1986 Because of the sheer size of the plastics industry the title *Developments in Plastics Technology* now covers an incredibly wide range of subjects or topics No single volume can survey the whole field in any depth and so what follows is therefore a series of chapters on selected topics The topics were selected by us the editors because of their immediate relevance to the plastics industry When one considers the materials produced and used by the modern plastics industry there is a tendency to think of the commodity thermoplastics such as poly vinyl chloride or polyethylene the thermosetting materials are largely ignored Because of this attitude we are very pleased to include in this volume a chapter which deals with the processing of a thermosetting material i e the pultrusion of glass reinforced polyester The extrusion of plastics is of course a very important subject but an aspect which is often overlooked is the need to remove volatile matter during processing for this reason we have included a chapter on devolatilisation Current industrial practice is towards materials modification and this attitude is reflected in the chapters on the transformation of ethylene vinyl acetate polymers and the use of wollastonite in two important thermoplastics When assessing the performance of materials there is a tendency to concentrate on short term mechanical tests and ignore such topics as fatigue and longer term testing We are therefore very pleased to include a chapter on this subject
