Patient Restraint

Learning how to restrain dogs and cats properly is essential for safety.

Taking a Thorough Medical History

- A good history can yield clues that often help lead to a diagnosis.
- Listen closely to what clients tell you and take notes.
- If the information is not readily offered by the client, be sure to find out:
 - Nature of current health challenge (symptoms noticed by client)
 - Onset and duration of current health challenge
 - Current vaccination and parasite control status
 - Past health issues (not already noted in medical record)
- Recent changes in:
 - Behavior
 - Home environment
 - Husbandry practices
 - Elimination patterns
 - Eating and drinking patterns
 - Activity level
 - Weight status (loss or gain)

Maintaining Medical Records

- Whether handwritten or input electronically, medical records must thoroughly and accurately document each client and patient interaction.
- Medical record form, style, and level of detail will vary with each individual practice.
- Each time a pet is presented with a medical complaint, record the following on the medical record:
 - Patient history
 - Primary (and, if applicable, secondary) complaint(s)
 - General patient assessment
 - Physical exam findings, including vital signs
 - Diagnosis or differential diagnosis
 - Treatment protocols
 - Prognosis
 - Notes and observations pertaining to ongoing patient treatment and monitoring
 - Follow-up plan (diagnostic and treatment)
- Additional items to include in medical records:
 - Documentation of client conversations and interactions (phone, electronic, in person)
 - Patient and client information forms
 - Consent forms
 - Diagnostic results and reports
 - Anesthesia records
 - Discharge instructions
 - Patient reminders
 - Financial records

Robert Jones Bandage

- Useful for the temporary immobilization of long bone fractures below the elbow and stifle.
- When using for immobilization, always remember the more padding, the better.

Application

- Place tape stirrups along the lateral and medial aspects of the lower limb; place a tongue depressor between the loose ends of tape that extend beyond the limbs to allow for easy separation later.
- Wrap the limb in roll cotton, starting from the paw and working up the leg; apply multiple layers; the toes should remain visible at all times.
- Starting from the paw and working up the leg, compress the roll cotton using a conforming gauze layer.
- Peel the ends of the tape stirrups from the tongue depressors and reflect them onto the gauze covering.
- Cover the bandage with a layer of stretch wrap and secure ends with white tape.
- Bandage must be kept dry and the toes inspected periodically for swelling (a sign that the bandage is too tight).

Recording an EKG (Lead II)

- Patient can be standing or in lateral recumbency.
- Attach clips in following locations:
 - Right arm (RA-White)/Left arm (LA-Black): On skin proximal to olecranon on caudal aspect of appropriate forelimb.
 - Right leg (RL-Green)/Left leg (LL-Red): On skin over patellar ligament on anterior aspect of appropriate rear limb.
- Molten clip sites with alcohol or conductive gel.
- To assess arrhythmias, record lead II at a paper speed of 25 mm/sec for 30 seconds (1 cm = 1 mV); if an arrhythmia is noted, record lead II for an additional 60 seconds.
- To get a good measurement of P-QRS-T waveforms, record lead II at a speed of 50 mm/sec for 10 seconds (1 cm = 1 mV).
- If the QRS complex extends beyond the paper margin, decrease sensitivity so 1/2 cm = 1 mV.
