Ocean Island Volcanoes: Genesis, Evolution and Impact Adriano Pimentel, Ricardo S. Ramalho, Laura Becerril, Patricia Larrea, Richard J. Brown, 2020-06-08 Ocean island volcanoes constitute some of the most prominent and rapidly formed features on Earth and yet they cannot be explained by conventional plate tectonics Although typically associated with intraplate settings hotspots these volcanoes also occur in different geodynamic settings near mid ocean ridges The nature of ocean island magmatism is still the subject of intense debate within the geological community Traditionally it has been linked to the presence of mantle plumes at depth e g Hawaii although the interaction with plate tectonics is also recognized to play a significant role e g Azores Galapagos Magma compositions may range from basaltic to more differentiated which consequently is accompanied by striking changes in the eruption style from effusive dominated to highly explosive volcanism Understanding how these magmas evolve and how volcanic processes act at ocean island volcanoes are key issues of modern volcanology Moreover the growth of ocean island volcanoes from their rise on the seafloor as seamounts to island emergence and subsequent formation of shield volcanoes and in some cases large caldera volcanoes is governed by multiple interrelated changes It is well known that competing processes model ocean island volcanoes during alternating and or coeval periods of construction and destruction The geological evolution of these

volcanoes results from the balance among volcanism intrusions tectonics subsidence uplift mass wasting sedimentation and subaerial and wave erosion A better knowledge of the interplay between these processes is crucial to obtain a more comprehensive understanding of the evolution of such volcanoes and to the eventual formulation of a unified model for ocean island evolution Ocean islands are especially vulnerable to volcanic eruptions and other geological hazards on account of their typical small size rough topography and isolation which make risk management and evacuation difficult Volcanic eruptions in particular may have a significant impact on local populations infrastructures economy and even on the global climate It is therefore fundamental to monitor these volcanoes with complementary geophysical geodetic and geochemical techniques in order to forecast future eruptions and their impacts However the assessment of volcanic hazards on ocean islands is challenging due to the large variety of phenomena involved e g lava flows tephra fallout pyroclastic density currents lahars gas emissions Different approaches are used to assess volcanic hazards either based on empirical methods or sophisticated numerical models focusing on a single phenomenon or the combination of different hazards This Frontiers Research Topic aims to promote discussion within the scientific community representing an important step forward in our knowledge of ocean island volcanoes in order to serve as a reference for future research

U.S. Geological Survey Professional Paper ,1968 U.S. Geological Survey Bulletin ,1983 Guidebook to the Hawaiian Planetology Conference Ronald Greeley,1974 Collection of articles on general geology and field guides for Island of Hawaii Constitutes a general volcanology reference and comment edition of the Hawaiian Planetology Conference held in August 1974 Submarine Landslides William C. Schwab,Homa J. Lee,David C. Twichell,1993 *Characteristics of Hawaiian Volcanoes* Michael P. Poland,Taeko Jane Takahashi,Claire M. Landowski,Geological Survey (U.S.),2014 *Characteristics of Hawaiian Volcanoes* establishes a benchmark for the current understanding of volcanism in Hawaii and the articles herein build upon the elegant and pioneering work of Dutton Jagger Stearns and many other USGS and academic scientists Each chapter synthesizes the lessons learned about a specific aspect of volcanism in Hawaii based largely on continuous observation of eruptive activity and on systematic research into volcanic and earthquake processes during HVO's first 100 years NOTE NO FURTHER DISCOUNTS FOR ALREADY REDUCED SALE ITEMS
