Toxicology and Clinical Pharmacology of Herbal Products Melanie Johns Cupp, 2000-02-03 **Toxicology and Clinical Pharmacology of Herbal Products** Melanie Johns Cupp, 2000-02-03 The herbai medicine industry is growing at an astounding rate Trade group estimates suggest that total sales exceeded 4 billion dollars in 1999 Herbai remedies are for sale not just in health food stores but in supermar kets drug stores and even discount warehouses Along with the proliferation in sales has come a proliferation of information sources Not all of the sources are equally reliable or even intelligible Traditional herbalists classify thistle and mugwort as cholagogues substances used to make the gallbladder contract and release bile Medical school graduates are unlikely to have ever heard the term or even accept the notion that most right sided abdominal pain is a result of diminished bile flow Heroin and cocaine may not be the only drugs to come from plants but a practicing physician or toxicologist might be forgiven for thinking so In 1998 1264 papers were published about cocaine and only 17 about kava kava an abused herb that is not without toxic side effects Unfortunately the majority of the papers about kava kava were published in journals not found in ordinary hospital libraries In recognition of this fact and of the obvious need for a reliable reference work on herbai toxicology *The Toxicology and Clinical Pharmacology of Herbal Products* was an early addition to our new series in Forensic Science and Medicine It is very badly needed **Herbal Products**

Ramsay, 2007-11-06 The practice of forensic pathology includes the collection and analysis of evidence in relation to a corpse in order to establish the cause of death Knowledge of the cause of death contributes to the determination of the manner of death by medical examiners and coroners who are occasionally assisted by law enforcement officers In the process of establishing the cause and manner of death representatives of various investigative bodies have several responsibilities

including explaining the death to family members attempting to reduce the risk of similar deaths in the future and if applicable apprehending the individuals who are responsible for the death The most well known and popular role of a forensic pathologist is in the investigation of cases of suspicious death however most medicolegal autopsies involve unexpected deaths that are above suspicion many of which are caused by trauma trauma being defined as any physical force or agent that causes bodily harm The purpose of Forensic Pathology of Trauma Common Problems for the Pathologist is to provide practical advice and information about the conduct of the forensic autopsy in cases of trauma and to offer guidance about the analysis of the autopsy findings in these cases

Drugs of Abuse Raphael C. Wong, Harley Y. Tse, 2007-11-05. A comprehensive review of the science of drug testing in all its aspects, placing emphasis on technologies that use body fluids other than urine for determining the presence of drugs of abuse. The authors discuss the various body fluid specimens suitable for testing for illicit drugs, particularly saliva, sweat and hair, describe the structural and manufacturing aspects of on-site testing devices based on lateral flow immunoassay and detail the pitfalls of using these specimens. They also discuss in detail the problem of sample adulteration and its detection. Since oral fluid has the best potential of succeeding urine as the next matrix of choice for drug detection, four popular saliva testing devices are examined: Intercept, the Dräger Drug Test Oratect and Drugwipe. Political, social and legal issues are also considered in articles on privacy, the use of drug testing in courts and the problem of sample adulteration.
