Toxin The Cunning Of Bacterial Poisons:

Toxin Alistair J. Lax, 2005-10-27 What do the following have in common the promise of Botox as the key to everlasting youthful looks E coli O157 hamburger disease a mysterious illness which killed 35 heroin users in 2000 and the assassination by poisoned umbrella tip of a Bulgarian dissident in the 1970s The answer is that all of these are caused by toxins the powerful biological poisons released by bacteria and some plants In *Toxin* Alistair Lax reveals the panoply of ways in which bacterial toxins overcome the defences of our cells He explains how they work how they are so successful in causing major diseases the terrible human impact they have had and how apparently new diseases arise from them He also discusses how we can combat toxins and how we can harness their actions for beneficial purposes Enlivened by the very human story of the persistence rivalries and insights from which modern microbiology grew *Toxin* is the first widely accessible account of this exciting and important topic

Toxin Alistair J. Lax, 2005-10-27 Alistair Lax reveals the panoply of ways in which bacterial toxins overcome the defences in our cells He explains how they work how they are so successful in causing major diseases and how humans can learn to combat them and even harness them for beneficial purposes *Microbial Toxins in Dairy Products* Adnan Y. Tamime, 2017-02-06 Food borne diseases including those via dairy products have been recognised as major threats to human health The causes associated with dairy food borne disease are the use of raw milk in the manufacture of dairy products faulty processing conditions during the heat treatment of milk post processing contamination failure in due diligence and an unhygienic water supply Dairy food borne diseases affecting human health are associated with certain strains of bacteria belonging to the genera of Clostridium Bacillus Escherichia Staphylococcus and Listeria which are capable of producing toxins plus moulds that can produce mycotoxins such as aflatoxins sterigmatocytin and ochratoxin *Microbial Toxins in Dairy Products* reviews the latest scientific knowledge and developments for detecting and studying the presence of these toxins in dairy products updating the analytical techniques required to examine bacterial and mould toxins and the potential for contamination of milk as it passes along the food chain i e from farm to fork This comprehensive and accessible collection of techniques will help dairy processors food scientists technologists researchers and students to further minimise the incidences of dairy food borne illnesses in humans

More Molecules of Murder John Emsley, 2017-06-23 How can a plant as beautiful as the foxglove be so deadly and yet for more than a century be used to treat heart disease The same is true of other naturally occurring molecules as will be revealed in this current book by award winning author and chemist John Emsley *More Molecules of Murder* follows on from his highly acclaimed earlier book *Molecules of Murder* and again it deals with 14 potential poisons seven of which are man made and seven of which are natural It investigates the crimes committed with them not from the point of view of the murderers their victims or the detectives but from the poison used In so doing it throws new light on how these crimes were carried out and ultimately how the perpetrators were uncovered and brought to justice Each chapter starts by looking at the target molecule itself its discovery its chemistry its

often surprising use in medicine its effects on the human body and its toxicology The rest of the chapter is devoted to murders and attempted murders in which it has been used But be reassured that murder by poison is not the threat it once was thanks to laws which restrict access to such materials and to the skills of analytical chemists in detecting their presence in incredibly tiny amounts

Smoking Ears and Screaming Teeth Trevor Norton,2012-09-27 A witty celebration of the great eccentrics who have performed dangerous scientific experiments on themselves for the benefit of humankind Many scientists have followed the advice of the great Victorian doctor Jack Haldane to never experiment on an animal if a man will do and never ask anyone to do anything you wouldn't do yourself He and his father inhaled poisonous gasses to test the efficacy of the prototype gas mask they had invented When breathing gasses under pressure he suffered the smoking ears and screaming teeth of the title The stories in Norton's new book are astonishing disturbing or absurd The zoologist Frank Buckland made a concentrated effort to widen the nation's diet by personally testing everything that crossed his path from boiled elephant's trunk to slug soup Some medics deliberately contracted deadly blood diseases in the hope of finding cures Then there was the surgeon who was fired and subsequently won the Nobel Prize for thrusting a catheter into his own beating heart [Germs, Genes, and Bacteria](#) David Clark,Greg Gibson,Anne Maczulak,2011-03-30 Breakthrough bioscience and its implications 3 extraordinary books take you to the cutting edge of biology genetics evolution and human health Three remarkable books take you to the cutting edge of biology genetics evolution and human health explaining the newest science and revealing its incredible implications Germs Genes Civilization How Epidemics Shaped Who We Are Today reveals how microbes have shaped our health genetics history culture politics religion and ethics and how they're shaping our future right now Allies and Enemies How the World Depends on Bacteria offers an even closer look at humans' intimate partnership with bacteria how they keep you alive how they can kill you and how we can all live together happily in peace Finally in It Takes a Genome How a Clash Between Our Genes and Modern Life Is Making Us Sick Greg Gibson explains today's explosion in chronic disease through a revolutionary new hypothesis our genome is out of equilibrium with itself its environment and modern culture From world renowned leaders in science and science journalism including David Clark Anne Maczulak and Greg Gibson [Routledge Handbook of Water and Health](#) Jamie Bartram,2015-09-25 This comprehensive handbook provides an authoritative source of information on global water and health suitable for interdisciplinary teaching for advanced undergraduate and postgraduate students It covers both developing and developed country concerns It is organized into sections covering hazards including disease chemicals and other contaminants exposure interventions intervention implementation distal influences policies and their implementation investigative tools and historic cases It offers 71 analytical and engaging chapters each representing a session of teaching or graduate seminar Written by a team of expert authors from around the world many of whom are actively teaching the subject the book provides a thorough and balanced

Fink-Gremmels,2012-06-11 The production of animal feed increasingly relies on the global acquisition of feed material
increasing the risk of chemical and microbiological contaminants being transferred into food producing animals Animal feed
contamination provides a comprehensive overview of recent research into animal feed contaminants and their negative
effects on both animal and human health Part one focuses on the contamination of feeds and fodder by microorganisms and
animal by products Analysis of contamination by persistent organic pollutants and toxic metals follows in part two before the
problem of natural toxins is considered in part three Veterinary medicinal products as contaminants are explored in part four
along with a discussion of the use of antimicrobials in animal feed Part five goes on to highlight the risk from emerging

Vaccines: A Biography Andrew W. Artenstein, 2009-12-11 Why another book about vaccines There are already a few extremely well written medical textbooks that provide comprehensive state of the art technical reviews regarding vaccine science Additionally in the past decade alone a number of engrossing provocative books have been published on various related issues ranging from vaccines against specific diseases to vaccine safety and policy Yet there remains a significant gap in the literature the history of vaccines *Vaccines A Biography* seeks to fill a void in the extant literature by focusing on the history of vaccines and in so doing recounts the social cultural and scientific history of vaccines it places them within their natural historical context The book traces the lineage the biography of individual vaccines originating with deeply rooted medical problems and evolving to an eventual conclusion Nonetheless these are not biographies in the traditional sense they do not trace an individual's growth and development Instead they follow an idea as it is conceived and developed through the contributions of many These are epic stories of discovery of risk takers of individuals advancing medical science in the words of the famous physical scientist Isaac Newton by standing on the shoulders of giants One grant reviewer described the book's concept as triumphalist although meant as an indictment this is only partially inaccurate
