Green Keynesianism and the Global Financial Crisis Kyla Tienhaara, 2018-04-17 It is widely accepted that limiting climate change to 2 C will require substantial and sustained investments in low carbon technologies and infrastructure However the dominance of market fundamentalism in economic thinking for the past three decades has meant that governments have generally viewed large spending programs as politically undesirable In this context the Global Financial Crisis GFC represented a huge opportunity for proponents of public investment in environmental projects or Green Keynesianism This book examines the experience of Australia Canada Japan Korea and the United States with Green Keynesian stimulus programs in the wake of the GFC Unfortunately on the whole the cases do not provide much optimism for proponents of Green Keynesianism Much less funding than was originally allocated to green programs was actually spent in areas that would produce an environmental benefit Furthermore a number of projects had negligible or even detrimental environmental outcomes While the book also documents several success stories the research indicates overall that more careful consideration of the design of green stimulus programs is needed In addition to concrete policy advice the book provides a broader vision for how governments could use Keynesian policies to work toward creating an ecological state This book will be of great interest to students and scholars of environmental politics environmental economics political economy and sustainable development
