Routledge Handbook of Climate Justice Tahseen Jafry, 2018-11-01 The term climate justice began to gain traction in the late 1990s following a wide range of activities by social and environmental justice movements that emerged in response to the operations of the fossil fuel industry and later to what their members saw as the failed global climate governance model that became so transparent at COP15 in Copenhagen The term continues to gain momentum in discussions around sustainable development climate change mitigation and adaptation and has been slowly making its way into the world of international and national policy However the connections between these remain unestablished Addressing the need for a comprehensive and integrated reference compendium The Routledge Handbook of Climate Justice provides students academics and professionals with a valuable insight into this fast growing field Drawing together a multidisciplinary range of

authors from the Global North and South this Handbook addresses some of the most salient topics in current climate justice research including just transition urban climate justice and public engagement in addition to the field's more traditional focus on gender international governance and climate ethics With an emphasis on facilitating learning based on cutting edge specialised climate justice research and application each chapter draws from the most recent sources real world best practices and tutored reflections on the strategic dimensions of climate justice and its related disciplines The Routledge Handbook of Climate Justice will be essential reading for students and scholars as well as being a vital reference tool for those practically engaged in the field

Climate Justice and the Economy Stefan Gaarsmand Jacobsen, 2018-05-15 As climate change has increasingly become the main focus of environmentalist activism since the late 1990s the global economic drivers of CO2 emissions are now a major concern for radical greens In turn the emphasis on connected crises in both natural and social systems has attracted more activists to the Climate Justice movement and created a common cause between activists from the Global South and North In the absence of a pervasive narrative of transnational or socialist economic planning to prevent catastrophic climate change these activists have been eager to engage with advanced knowledge and ideas on political and economic structures that diminish risks and allow for new climate agency This book breaks new ground by investigating what kind of economy the Climate Justice movement is calling for us to build and how the struggle for economic change has unfolded so far Examining ecological debt just transition indigenous ecologies social ecology community economies and divestment among other topics the authors

provide a critical assessment and a common ground for future debate on economic innovation via social mobilization Taking a transdisciplinary approach that synthesizes political economy history theory and ethnography this volume will be of great interest to students and scholars of climate justice environmental politics and policy environmental economics and sustainable development Climate Justice and Community Renewal Brian Tokar, Tamra Gilbertson, 2020-03-31 This book brings together the voices of people from five continents who live work and research on the front lines of climate resistance and renewal The many contributors to this volume explore the impacts of extreme weather events in Africa the Caribbean and on Pacific islands experiences of life long defenders of the land and forests in Brazil India Indonesia and eastern Canada and efforts to halt the expansion of fossil fuel infrastructure from North America to South Africa They offer various perspectives on how a just transition toward a fossil free economy can take shape as they share efforts to protect water resources better feed their communities and implement new approaches to urban policy and energy democracy Climate Justice and Community Renewal uniquely highlights the accounts of people who are directly engaged in local climate struggles and community renewal efforts including on the ground land defenders community organizers leaders of international campaigns agroecologists activist scholars and many others It will appeal to students researchers activists and all who appreciate the need for a truly justice centered response to escalating climate disruptions Routledge Handbook of the Climate Change Movement Matthias Dietz, Heiko Garrelts, 2014-01-10 This handbook provides a comprehensive overview of the growing transnational climate movement A dual focus on climate politics and civil society provides a hitherto unavailable broad and systematic analysis of the current global movement highlighting how its dynamic and diverse character can play an important role in environmental politics and climate protection The range of contributors from well known academics to activist scholars look at climate movements in the developed and developing world north and south small and large central and marginal The movement is examined as a whole and as single actors thereby capturing its scope structure development activities and influence The book thoroughly addresses theoretical approaches from classic social movement theory to the influence of environmental justice frames and follows this with a systematic focus on regions specific NGOs and activists cases and strategies as well as relations with peripheral groups In its breadth balance and depth this accessible volume offers a fresh and important take on the question of social mobilization around climate change making it an essential text for advanced undergraduates postgraduate students and researchers in the social sciences *Globalism and Localization* Jeanine Canty, 2019-05-16 Considering the context of the present ecological and social crisis this book takes an interdisciplinary approach to explore the relationship between globalism and localization Globalism may be viewed as a positive emergent property of globalization The latter depicts a worldwide economic and political system and arguably a worldview that has directly increased planetary levels of injustice poverty militarism violence and ecological destruction In contrast globalism represents interconnected systems of exchange and resourcefulness through increased communications

across innumerable global diversities In an economic cultural and political framework localization centers on small scale communities placed within the immediate bioregion providing intimacy between the means of production and consumption as well as long term security and resilience There is an increasing movement towards localization in order to counteract the destruction wreaked by globalization yet our world is deeply and integrally immersed within a globalized reality Within this collection contributors expound upon the connection between local and global phenomenon within their respective fields including social ecology climate justice ecopsychology big history peace ecology social justice community resilience indigenous rights permaculture food justice liberatory politics and both transformative and transpersonal studies **The**

Climate Crisis Adam Aron,2022-12-22 Why despite all we know about the causes and harms of global heating has so little effective action been taken to cut greenhouse gas emissions and what we can do to change that This book explains the mechanisms and impacts of the climate crisis traces the history and reasons behind the lack of serious effort to combat it describes some people s ongoing scepticism and how to shift it and motivates an urgent program of action It argues that the pathway to stopping dangerous global heating will require a much larger mobilization of advocacy and activism to impel decision makers to abandon fossil fuels and transition to renewable energy and electrification embedded in a political and social framework guided by justice principles It is an excellent resource for students and researchers on the climate crisis the need for a renewable energy transition and the current blocks to progress **Peace Ecology** Randall Amster,2015-11-17

North American and European Perspectives on Sustainability in Higher Education Walter Leal Filho,Julie Newman,Amanda Lange Salvia,Laís Viera Trevisan,Laura Corazza,2025-04-02 The scientific cultural and diplomatic relations between Europe and its partners in North America are very strong From a scientific point of view this long standing cooperation has taken place across a wide range of areas They include the field of sustainability where North America and Europe are working hand in hand seeking solutions to the many regional and global problems currently faced Against this

backdrop and in order to facilitate a broad discussion on the contribution of higher education institutions from both sides of the Atlantic towards a more sustainable future this book is being produced The book gathers inputs from universities and research organizations on the one hand but also from companies and enterprises on the other from Europe and North America working on matters related to sustainable development in a higher education context It also provides a platform for the dissemination of information on the latest initiatives paving the way for technology transfer and networking Furthermore the book intends to provide a fertile basis upon which European and North American organizations may cooperate more closely in this key area Last but not least a further aim of the book is to present methodological approaches and experiences deriving from case studies and projects which aim to show how sustainability in North America and in Europe may be enhanced in practice Routledge Handbook of Environmental Conflict and Peacebuilding Ashok Swain, Joakim

Öjendal, 2018-04-17 The past two decades have witnessed the emergence of a large body of research examining the linkage between environmental scarcity violent conflict and cooperation However this environmental security polemic is still trying to deliver a well defined approach to achieving peace Studies are being undertaken to find the precise pathways by which cooperative actions are expected not only to pre-empt or moderate resource conflicts but also to help diffuse cooperative behaviour to other disputed issues The recognition that environmental resources can contribute to violent conflict accentuates their potential significance as pathways for cooperation and the consolidation of peace in post conflict societies Conceived as a single and reliable reference source which will be a vital resource for students researchers and policy makers alike the Routledge Handbook of Environmental Conflict and Peacebuilding presents a wide range of chapters written by key thinkers in the field organised into four key parts Part I Review of the concept and theories Part II Review of thematic approaches resources scarcity intervention adaptation and peacebuilding Part III Case studies Middle East Iraq Jordan Liberia Nepal Colombia Philippines Part IV Analytical challenges and future oriented perspectives Enabling the reader to find a concise expert review on topics that are most likely to arise in the course of conducting research or policy making this volume presents a truly global overview of the key issues and debates in environmental conflict and peacebuilding *How the World Breaks* Stan Cox, Paul Cox, 2016-07-12 We've always lived on a dangerous planet but its disasters aren't what they used to be *How the World Breaks* gives us a breathtaking new view of crisis and recovery on the unstable landscapes of the Earth's hazard zones Father and son authors Stan and Paul Cox take us to the explosive fire fronts of overheated Australia the future lost city of Miami the fights over whether and how to fortify New York City in the wake of Sandy the Indonesian mud volcano triggered by natural gas drilling and other communities that are reimagining their lives after quakes superstorms tornadoes and landslides In the very decade when we should be rushing to heal the atmosphere and address the enormous inequalities of risk a strange idea has taken hold of global disaster policy resilience Its proponents say that threatened communities must simply learn the art of resilience adapt to risk and thereby survive This doctrine obscures the

human hand in creating disasters and requires the planet's most beleaguered people to absorb the rush of floodwaters and the crush of landslides freeing the world economy to go on undisturbed. The Coxes' great contribution is to pull the disaster debate out of the realm of theory and into the muck and ash of the world's broken places. There we learn that change is more than mere adaptation and life is more than mere survival. Ultimately, *How the World Breaks* reveals why, unless we address the social, ecological, and economic roots of disaster, millions more people every year will find themselves spiraling into misery. It is essential reading for our time.

Critical Approach to Sustainability Discourse and Action in International Relations Güdek-Gölçek, Şeyda, Durmaz, Günseli, İnan-Şimşek, Aybüke, 2025-10-01 Sustainability is central to international relations shaping policies, treaties, and global development. However, sustainability discourse is often influenced by power dynamics, economic interests, and political agendas that can undermine environmental and social progress. This perspective highlights the inequalities and contradictions in global sustainability initiatives. By examining definitions of sustainability, how interests are prioritized, and how actions are implemented, a deeper understanding of the complexities behind international sustainability efforts is encouraged. Further exploration of the discourse and actions surrounding sustainability in international relations may reveal their effectiveness, fairness, and long-term impact. *Critical Approach to Sustainability Discourse and Action in International Relations* explores critical debates in international relations, environmental policy, development, and gender studies by challenging mainstream discourses of sustainability visions. It examines academic discourse on the gap between global actors' commitments and actual environmental, political, economic, and social outcomes. This book covers topics such as renewable energy, ecology, and geopolitics and is a useful resource for business owners, government officials, policymakers, engineers, academicians, researchers, and environmental scientists.

Education in Times of Environmental Crises Ken Winograd, 2016-04-14 The core assumption of this book is the interconnectedness of humans and nature and that the future of the planet depends on humans' recognition and care for this interconnectedness. This comprehensive resource supports the work of pre-service and practicing elementary teachers as they teach their students to be part of the world as engaged citizens, advocates for social and ecological justice. Challenging readers to more explicitly address current environmental issues with students in their classrooms, the book presents a diverse set of topics from a variety of perspectives. Its broad social-cultural perspective emphasizes that social and ecological justice are interrelated. Coverage includes descriptions of environmental education pedagogies such as nature-based experiences and place-based studies, peace education practices, children doing environmental activism, and teachers supporting children emotionally in times of climate disruption and tumult. The pedagogies described invite student engagement and action in the public sphere. Children are represented as agents of change engaged in social and environmental issues and problems through their actions, both local and global.

Agriculture and Food in Crisis Fred Magdoff, Brian Tokar, 2010-11-01 The failures of free market capitalism are perhaps nowhere more evident than in the production and distribution of food. Although modern human

societies have attained unprecedented levels of wealth a significant amount of the world's population continues to suffer from hunger or food insecurity on a daily basis In *Agriculture and Food in Crisis* Fred Magdoff and Brian Tokar have assembled an exceptional collection of scholars from around the world to explore this frightening long term trend in food production While approaching the issue from many angles the contributors to this volume share a focus on investigating how agricultural production is shaped by a system that is oriented around the creation of profit above all else with food as nothing but an afterthought As the authors make clear it is technically possible to feed the world's people but it is not possible to do so as long as capitalism exists Toward that end they examine what can be and is being done to create a human centered and ecologically sound system of food production from sustainable agriculture and organic farming on a large scale to movements for radical land reform and national food sovereignty This book will serve as an indispensable guide to the years ahead in which world politics will no doubt come to be increasingly understood as food politics

Environmental Communication and the Public Sphere Phaedra C. Pezzullo, Robert Cox, 2017-10-24 The fifth edition of this award winning text remains the most comprehensive introduction in the growing field of environmental communication offering insights into real world applications of the topic and exploring recent events such as the Trump Administration the People's Climate March and international legal precedents
