[God and Natural Order](#) Shaun C. Henson, 2013-12-04 In God and Natural Order Physics Philosophy and Theology Shaun

Henson brings a theological approach to bear on contemporary scientific and philosophical debates on the ordered or disordered nature of the universe Henson engages arguments for a unified theory of the laws of nature a concept with monotheistic metaphysical and theological leanings alongside the pluralistic viewpoints set out by Nancy Cartwright and other philosophers of science who contend that the nature of physical reality is intrinsically complex and irreducible to a single unifying theory Drawing on the work of theologian Wolfhart Pannenberg and his conception of the Trinitarian Christian god the author argues that a theological line of inquiry can provide a useful framework for examining controversies in physics and the philosophy of science God and Natural Order will raise provocative questions for theologians Pannenberg scholars and researchers working in the intersection of science and religion

Religious Transhumanism and Its Critics Arvin M. Gouw, Brian Patrick Green, Ted Peters, 2022-03-10 Why do representatives of different religious traditions find the transhumanist vision of the future not only theologically compatible but even inspiring Transhumanism is a global movement seeking radical human enhancement The trans in transhumanism marks the transition from the present stage in human evolution into the future namely post human existence Containing chapters written by adherents to a variety of religious traditions Religious Transhumanism and Its Critics provides first hand testimony to the value of the transhumanist vision perceived by the religious mind In addition the contributors critique both secular and religious transhumanism in light of realistic science and commitment to social justice

Theologies of Creation Thomas Jay Oord, 2014-10-02 Humans have long wondered about the origin of the universe And such questions are especially alive today as physicists offer metaphysical theories to account for the emergence of creation Theists have

attributed the universe's origin to divine activity and many have said God created something from absolute nothingness. The venerable doctrine of *creatio ex nihilo* especially emphasizes God's initial creating activity. Some contributors to this book explore new reasons *creatio ex nihilo* should continue to be embraced today. But other contributors question the viability of creation from nothing and offer alternative initial creation options in its place. These new alternatives explore a variety of options in light of recent scientific work, new biblical scholarship and both new and old theological traditions.

The Re-Emergence of Emergence Philip Clayton, Paul Davies, 2006-06-30 Much of the modern period was dominated by a reductionist theory of science. On this view to explain any event in the world is to reduce it down to fundamental particles, laws and forces. In recent years reductionism has been dramatically challenged by a radically new paradigm called emergence. According to this new theory, natural history reveals the continuous emergence of novel phenomena, new structures and new organisms with new causal powers. Consciousness is yet one more emergent level in the natural hierarchy. Many theologians and religious scholars believe that this new paradigm may offer new insights into the nature of God and God's relation to the world. This volume introduces readers to emergence theory, outlines the major arguments in its defence and summarizes the most powerful objections against it. Written by experts but suitable as an introductory text, these essays provide the best available presentation of this exciting new field and its potentially momentous implications.

Scripture in the Theologies of W. Pannenberg and D.G. Bloesch Frank M. Hasel, 2004-03-01 Scripture has always played an important role in Christian theology. This study provides an issue-oriented overview of the concepts of Scripture in Protestant theology from the 16th century Reformation onward. It then sets forth the concepts of Scripture in the theologies of two contemporary systematic theologians, W. Pannenberg and D. G. Bloesch. It analyzes, compares and evaluates the theological and anthropological presuppositions that have influenced their concept of Scripture. Despite fundamentally different starting points and other significant distinctions, Pannenberg and Bloesch reveal surprising similarities. This seems to suggest that for both the concept of Scripture is determined ultimately by presuppositions that are derived and shaped *extra scripturam*.

The Cosmic Breath Amos Yong, 2012-05-10 The interjection of pneumatology in both theologies of interreligious dialogue and in the theology and science conversation comes together in this volume. The resulting Christianity-Buddhism science dialogue opens up to new pneumatological perspectives on philosophical cosmology and anthropology in interdisciplinary and global context.

A New Hope Stephen Lakkis, 2014-10-16 Theology and historiography often see the future as a realm open to new experiences and unexpected events. Yet for classical physics the future was the result of the universe's predictable development. Given enough information about current states, we could use the laws of nature to uncover the universe's future. Modern space-time theory with its picture of an invariant four-dimensional universe only makes this problem more acute. Room for radically novel events, for miracles and new hope seems to have disappeared. It is this hope for something new that the German theologian Wolfhart Pannenberg seeks to preserve in his controversial work on time. To

defend God's supernatural freedoms and to escape natural determinism Pannenberg invokes a medieval understanding of the unsurpassable and absolute power of God using God's *potentia absoluta* to reverse time's flow and express absolute authority over creation's progress Time and all its contents are utterly subjected under the free will of a divine all determining reality But is this tenable for modern understandings of God and the universe Or does it lead to theological difficulties and promote an arms race between the laws of nature and the rule of God In this volume Stephen Lakkis offers an analysis and critique of Pannenberg's approach and suggests a different way forward
