Anthropologist , 2002 **Exploration of Subsurface Antarctica** M.J. Siegert, S.S.R. Jamieson, D.A. White, 2018-01-08 Our
appreciation of glaciological processes in Antarctica suffers from a lack of observations in regions where numerical models
indicate the ice sheet to be susceptible to ocean and or atmospheric warming The solution lies in the use and development of
glacier geophysics In this volume we present a series of papers that demonstrate how geophysics can be deployed in
Antarctica to comprehend 1 boundary conditions that influence ice flow such as subglacial topography the distribution of
basal water and ice sheet rheology 2 phenomena that might affect ice flow processes such as complex internal ice sheet
structures and the proposition of large stores of hitherto unappreciated groundwater and 3 how glacial sediments and
formerly glaciated terrain on and surrounding the continent can inform us about past ice sheet dynamics The volume also
takes a historical view on developments leading to current knowledge examines active ice sheet processes and points the way
forward on how geophysics can advance quantitative understanding of Antarctic ice sheet behaviour
