With Speed And Violence Why Scientists Fear Tipping Points In Climate Change:

With Speed and Violence Fred Pearce, 2007-03-15 Nature is fragile environmentalists often tell us But the lesson of this book is that it is not so The truth is far more worrying Nature is strong and packs a serious counterpunch Global warming will very probably unleash unstoppable planetary forces And they will not be gradual The history of our planet s climate shows that it does not do gradual change Under pressure whether from sunspots or orbital wobbles or the depredations of humans it lurches virtually overnight from the Introduction Fred Pearce has been writing about climate change for eighteen years and the more he learns the worse things look Where once scientists were concerned about gradual climate change now more and more of them fear we will soon be dealing with abrupt change resulting from triggering hidden tipping points Even President Bush s top climate modeler Jim Hansen warned in 2005 that we are on the precipice of climate system tipping points beyond which there is no redemption As Pearce began working on this book normally cautious scientists beat a path to his door to tell him about their fears and their latest findings With Speed and Violence tells the stories of these scientists and their work from the implications of melting permafrost in Siberia and the huge river systems of meltwater beneath the icecaps of Greenland and Antarctica to the effects of the ocean conveyor and a rare molecule that runs virtually the entire cleanup system for the planet Above all the scientists told him what they re now learning about the speed and violence of past natural climate change and what it portends for our future With Speed and Violence is the most up to date and readable book yet about the growing evidence for global warming and the large climatic effects it may unleash

Climate Change and Society John Urry, 2011-06-20 This is the first book to develop a proper sociology of climate change and will be an excellent companion to Tony Giddens The Politics of Climate Change

Why We Disagree about Climate Change Mike Hulme, 2009-04-30 Climate change is not a problem waiting for a solution It is an environmental cultural and political phenomenon which is re shaping the way we think about ourselves our societies and humanity s place on Earth Drawing upon twenty five years of professional work as an international climate change scientist and public commentator Mike Hulme provides a unique insider s account of the emergence of this phenomenon and the diverse ways in which it is understood He uses different standpoints from science economics faith psychology communication sociology politics and development to explain why we disagree about climate change In this way he shows that climate change far from being simply an issue or a threat can act as a catalyst to revise our perception of our place in the world Why We Disagree About Climate Change is an important contribution to the ongoing debate over climate change and its likely impact on our lives

Crime, Violence, and Global Warming John Crank, Linda Jacoby, 2015-05-20 Crime Violence and Global Warming introduces the many connections between climate change and criminal activity Conflict over natural resources can escalate to state and non state actors resulting in wars asymmetrical warfare and terrorism Crank and Jacoby apply criminological theory to each aspect of this complicated web helping readers to evaluate conflicting claims about global warming and to analyze evidence of the

current and potential impact of climate change on conflict and crime Beginning with an overview of the science of global warming the authors move on to the links between climate change scarce resources and crime Their approach takes in the full scope of causes and consequences present and future in the United States and throughout the world The book concludes by looking ahead at the problem of forecasting future security implications if global warming continues or accelerates This fresh approach to the criminology of climate change challenges readers to examine all sides of this controversial question and to formulate their own analysis of our planet's future

Plants and Insects Stephen Aitken, 2013-08-01 Readers will learn that the ability of plants and insects to reproduce and expand their ranges is affected by changes in temperature and precipitation The timing between insect pollinators and the flowering plants is also impacted by climate change We need to conserve the delicate balance in our ecosystems as carbon dioxide levels rise even further

Systematic Theology and Climate Change Michael S. Northcott, Peter M. Scott, 2014-06-05 This book offers the first comprehensive systematic theological reflection on arguably the most serious issue facing humanity and other creatures today Responding to climate change is often left to scientists policy makers and activists but what understanding does theology have to offer In this collection the authors demonstrate that there is vital cultural and intellectual work for theologians to perform in responding to climate science and in commending a habitable way forward Written from a range of denominations and traditions yet with ecumenical intent the authors explore key Christian doctrines and engage with some of

the profound issues raised by climate change Key questions considered include What may be said about the goodness of creation in the face of anthropogenic climate change And how does theology handle a projected future without the human The volume provides students and scholars with fascinating theological insight into the complexity of climate change

Climate Machines, Fascist Drives, and Truth William E. Connolly, 2019-09-06 In this new installation of his work William E Connolly examines entanglements between volatile earth processes and emerging cultural practices highlighting relays among extractive capitalism self amplifying climate processes migrations democratic aspirations and fascist dangers In three interwoven essays Connolly takes up thinkers in the minor tradition of European thought who unlike Cartesians and Kantians cross divisions between nature and culture He first offers readings of Sophocles and Mary Shelley asking whether close attention to the Anthropocene could perhaps have arrived earlier had subsequent humanists absorbed their lessons He then joins Deleuze and Guattari's notion of an abstract machine with contemporary earth sciences doing so to compare the Antique Little Ice Age of the late Roman empire to contemporary relays between extractive capitalism and accelerating climate processes The final essay stages a dramatic dialogue between Alfred North Whitehead and Michel Foucault about the pursuit of truth during a time of planetary turbulence With *Climate Machines Fascist Drives and Truth* Connolly forges incisive interventions into key issues of our time

Climate Change and Future Justice Catriona McKinnon, 2012-03-12 Climate change creates unprecedented problems of intergenerational justice What do members of the current generation owe to future generations in virtue of the contribution they are making to climate change Providing important new insights within the theoretical framework of political liberalism *Climate Change and Future Justice* presents arguments in three key areas Mitigation the current generation ought to adopt a strong precautionary principle in formulating climate change policy in order to minimise the risks of serious harm from climate change imposed on future generations Adaptation the current generation ought to create a fund to which members of future generations may apply for compensation if the risks of climate change harm imposed on them by the current generation ripen into harms Triage future generations ought to keep alive hope for a return to the framework of justice for the social cooperation of future people less burdened by climate change harms This work presents agenda setting applications of important principles of democratic equality to the most serious set of political challenges ever faced by human society It should be required reading for political theorists and environmental philosophers

Trajectory of the 21st Century Lawrence J. Terlizese, 2009-01-10 *Trajectory of the Twenty first Century* explores what many prophets of the twentieth century such as Oswald Spengler Paul Tillich Aldous Huxley Jacques Ellul and others have predicted would transpire in the current century Their vision included an out of control technological system and a return to religious sentiment that will ultimately undermine the system to which it is reacting This book aims to accurately present their positions and draw certain logical conclusions from them that pertain to the course of history in our time The book's theme argues that modernity is a secularized version of millennial Christianity which reaches its fullest development

in the twenty first century and will regress into what Russian philosopher Nicholas Berdyaev called the new Middle Ages or a new religious period This will mean the twilight of modern technological society as its values of rationalism give way to a post-rationalist society Ironically decline will come through further technological advance Omnicide threatens through religious world war driven by transcendent values and modern weaponry Jihadist thinking and posthumanist technology both establish the omnicidal mentality New technologies such as genetic engineering and artificial intelligence created under millennial inspiration to reach for immortality could potentially bring an end to the human species either through a slow steady obsolescence or through environmental catastrophe The titanic forces of technological progress and regress are on a direct collision course in the twenty first century
