Wnt Signaling A Subject Collection From Cold Spring Harbor Perspectives In Biology:

Wnt Signaling Roel Nusse, He, Xi, Renee van Amerongen, 2013 Wnt proteins are signaling molecules that play critical roles during embryonic development and in the regeneration of adult tissues They bind to Frizzled and LRP family receptors on the cell surface triggering a series of events that cause catenin to enter the nucleus and activate transcription factors that control cell fate and cell proliferation Mutations in components of the Wnt pathway lead to developmental defects and are common in cancer Written and edited by experts in the field this collection from Cold Spring Harbor Perspectives in Biology covers all aspects of canonical Wnt signaling as well as catenin independent Wnt signaling and cross talk with other pathways The contributors examine the numerous Wnt ligands their production secretion and interactions with components of the extracellular environment and details of the downstream signaling pathways that mediate the effects of Wnt proteins on cells The roles of Wnt signaling in stem cell self renewal cell polarity body axis specification wound healing and other aspects of normal development and physiology are also covered This volume includes discussion of Wnt signaling in cancer skeletal defects neurological disorders and other human disease states Thus it is an indispensable reference for cell and developmental biologists as well as those especially in the fields of stem cell biology and regenerative medicine who are interested in targeting the Wnt pathway for therapeutic purposes Generation and Interpretation of Morphogen Gradients

James Briscoe, Peter Anthony Lawrence, Jean-Paul Vincent, 2010 Signalling by morphogens such as the Hedgehog family Notch Wingless Wnt and various growth factors is essential during embryogenesis The establishment of concentration gradients of these morphogens plays a key role during developmental patterning in all multicellular organisms assuring that distinct cell tissue types and organs appear at the right place in the right time during embryogenesis Regulation of morphogen synthesis trafficking and diffusion are all known to play a part in setting up these gradients and a complex web of signaling mechanisms ensures that specific responses occur at the correct threshold concentration in the recipient cells whose fate depends on these morphogens **Symmetry Breaking in Biology** Rong Li, Bruce Bowerman, 2010 Experts

examine the mechanisms by which cells polarize divide asymmetrically and produce asymmetric structures providing examples from bacteria yeast plants invertebrates and mammals Discussion include the molecular basis of polarization mechanisms and more *Dupuytren's Disease - E-BOOK* Lawrence C. Hurst, Marie A. Badalamente, David Edward Komatsu, 2023-06-02 Dupuytren's Disease A Scientific Review offers consolidated up to date coverage of both the basic normal nonpathologic science and cutting edge science of this progressive disorder Drs Lawrence C Hurst Marie A Badalamente and David Edward Komatsu break down the complex topic of Dupuytren's contracture into its basic scientific components Hand surgeons plastic surgeons and orthopaedic surgeons will find this unique concise title to be especially helpful in their practices Includes chapters on prevalence of Dupuytren's disease normal genetics and the genetic abnormalities associated with Dupuytren's disease and collagen and collagen synthesis in healthy fascia and Dupuytren's

disease Provides numerous illustrations throughout Contains an in depth bibliography and a useful complete glossary of related terms Consolidates today s available information on Dupuytren s science into a single convenient resource
