Topological Geometrophysics By Pitkanen Matti 2006 Paperback:

Topological Geometrophysics Matti Pitkanen, 2016-03-03 Topological geometrodynamics TGD is a modification of the theory of general relativity inspired by the problems related to the definition of inertial and gravitational energies in the earlier hypotheses TGD is also a generalization of super string models TGD brings forth an elegant theoretical projection of reality and builds upon the work by renowned scientists Wheeler Feynman Penrose Einstein Josephson to name a few In TGD Physical space time planes are visualized as four dimensional surfaces in a certain 8 dimensional space H The choice of H is fixed by symmetries of standard model and leads to a geometric mapping of known classical fields and elementary particle numbers TGD differs from Einstein s geometrodynamics in the way space time planes or sheets are lumped together Extending the theory based on fusing number concepts implies a further generalisation of the space time concept allowing the identification of space time correlates of cognition and intentionality Additionally zero energy ontology forces an extension of quantum measurement theory to a theory of consciousness and a hierarchy of phases is identified Dark matter is thus predicted with far reaching implications for the understanding of consciousness and living systems Therefore it sets a solid foundation for modeling our universe in geometric terms Topological Geometrophysics An Overview explains basic and advanced concepts about TGD The book covers introductory information and classical TGD concepts before delving into twistor space theory particle physics infinite dimensional spinor geometry generalized number theory Planck constants and the applications of TGD theory in research The book is a valuable guide to TGD theory for researchers and advanced graduates in theoretical physics and cosmology *Shaman* ,2007

departure from the traditional focus on purely analytic arguments The author approaches ontology metaphysics and logic as having offered a number of ways of constructing the description of reality and aims at deepening their relationships in a new way Going beyond the mere abstract and formal aspects of logical analysis he offers a new architecture of logic that sees it as applied not only to the reasoning processes belonging to the first disciplinary group ontology but also directly concerned with entities events and phenomena studied by the second one metaphysics It is the task of the book to elaborate such a constructive logic both by offering a local view of the structure of the reality in general and by proffering a wealth of models able to encompass its implications for science In turning from the merely formal to the constructive account of logic Brenner overcomes the limitation of logic to linguistic concepts so that it can be not only a logic of reality but also in that reality which is constitutively characterized by a number of fundamental dualities observer and observed self and not self internal and external etc
