Toward An Evolutionary Regime For Spectrum Governance Licensing Or Unrestricted Entry:

Toward an Evolutionary Regime for Spectrum Governance William J. Baumol, Dorothy Robyn, 2006-02-03 The federal government's approach to regulating the spectrum remains largely administrative causing major inefficiency and waste Ironically just as the FCC has begun to use market mechanisms some people are pushing to treat spectrum as a common resource open to all entrants Commons proponents maintain that with new interference avoiding technology licensing is becoming unnecessary and impractical In this brief study noted economist William J Baumol evaluates two options for spectrum governance a tradable license market approach and a commons approach He compares the practicality of each in terms of six key issues interference adequacy of investment in innovation monopoly power preservation of diversity service to rural areas and the tension between vested interests and the need for adaptable arrangements Baumol demonstrates that while neither approach is ideal a commons regime has severe shortcomings Above all he emphasizes the importance of impermanence in the granting of licenses to preserve the flexibility to adapt to unforeseen technological and other developments

Transition Paths in a Spectrum Commons Regime Francois Bar, 2012 The Federal Communications Commission FCC and the Federal Radio Agency before it has been determining who and how radio spectrum is used in the USA There has been a strongly held view in regulation that the radio spectrum has been a scarce resource and hence must be subject to strict licensing for use In 1993 the FCC for the first time treated spectrum as a private good and auctioned it All stakeholders currently admit that the current licensing regime is obsolete and needs to be redefined to enable a more efficient and useful allocation of spectrum In the past few years two diverging opinions have formed out of these discussions one that supports the creation of property rights in spectrum allowing it to be traded aggregated and divided like any other property and the other which would like to see spectrum being used as a commons where anyone who follows basic rules of etiquette can use spectrum without a fee or license The supporters of the commons regime argue that innovation and

maximized allocation efficiency will come out of a less restrictive policy while property rights supporters claim that since spectrum is a scarce resource it should be handled by a market for optimal welfare and that treating it as a commons would only lead to tragedy We believe that a commons regime would do much to benefit the current level of innovation and the establishment of new and interesting services and products in the user space However although we recognize that the commons can fail we do not feel that it is necessary to discard the commons regime completely Instead we propose that the commons would be a better spectrum policy regime and should be established for most of the spectrum Only if and when the commons shows signs of failing or heading towards tragedy should a more restrictive policy structure be implemented In order to establish this argument we begin by listing the relative benefits and limitations of the commons regime and then move on to an analysis of the possible failure modes of the spectrum commons Through this we hope to isolate specific conditions where the commons might fail and then to grade them according to extent of failure For each of the failure modes that we find as relevant we propose responses that could range from technical to policy In this way we specify exactly what the different responses should be in each case and to propose or require transitions only when absolutely necessary In this way we hope to establish a stable and viable commons structure which would work and in the case of failure provide the stakeholders with a pre defined response in order to minimize disruptions and allow for smooth transitions to more restrictive regimes
