Towards The Multilingual Semantic Web Principles Methods And Applications:

Towards the Multilingual Semantic Web Paul Buitelaar, Philipp Cimiano, 2014-11-13 To date the relation between multilingualism and the Semantic Web has not yet received enough attention in the research community One major challenge for the Semantic Web community is to develop architectures frameworks and systems that can help in overcoming national and language barriers facilitating equal access to information produced in different cultures and languages As such this volume aims at documenting the state of the art with regard to the vision of a Multilingual Semantic Web in which semantic information will be accessible in and across multiple languages The Multilingual Semantic Web as envisioned in this volume will support the following functionalities 1 responding to information needs in any language with regard to semantically structured data available on the Semantic Web and Linked Open Data LOD cloud 2 verbalizing and accessing semantically structured data ontologies or other conceptualizations in multiple languages 3 harmonizing integrating aggregating comparing and repurposing semantically structured data across languages and 4 aligning and reconciling ontologies or other conceptualizations across languages The volume is divided into three main sections Principles Methods and Applications The section on Principles discusses models architectures and methodologies that enrich the current Semantic Web architecture with features necessary to handle multiple languages The section on Methods describes algorithms and approaches for solving key issues related to the construction of the Multilingual Semantic Web The section on Applications describes the use of Multilingual Semantic Web based approaches in the context of several application domains This volume is essential reading for all academic and industrial researchers who want to embark on this new research field at the intersection of various research topics including the Semantic Web Linked Data natural language processing computational linguistics terminology and information retrieval It will also be of great interest to practitioners who are interested in re examining their existing infrastructure and methodologies for handling multiple languages in Web applications or information retrieval systems *Knowledge-Driven Multilingual Text Analysis and Transparent Information Retrieval* Gregor

Thurmair, 2025-10-09 This book presents all components and knowledge sources required for Transparent Information Retrieval Depending on the respective topic and taking care of their interoperability both deep and shallow technology is used The processing starts from the analysis of the text data and collects its results in a multilingual conceptual network this way enabling Transparent Information Retrieval where users communicate with the system in their native language while the documents could be in a different language transparent to the users To do so the author investigates all text analysis components required for multilingual indexing starting from preparatory work like language and topic identification continuing with sentence splitting and tokenization including Chinese and describing lexical analysis also for multiword entries and Named Entities Entries are then disambiguated both on syntactic by a tagger and semantic level by multilingual word sense disambiguation The analysis results are collected in a dynamic multilingual ConceptNet which is an index

structure extended by monolingual relations like synonyms or head modifier links as well as multilingual ones translations In addition to many European languages also Turkish Arabic Persian and Chinese are treated The book concludes with a description of components needed to build the required resources like crawlers bilingual term extraction and tools for defaulting linguistic annotations For each component readers will find a technology overview a discussion of its main challenges in computational treatment a description of the technical solution selected and evaluation information The Routledge Companion to Digital Humanities and Art History Kathryn Brown,2020-04-15 The Routledge Companion to Digital Humanities and Art History offers a broad survey of cutting edge intersections between digital technologies and the study of art history museum practices and cultural heritage The volume focuses not only on new computational tools that have been developed for the study of artworks and their histories but also debates the disciplinary opportunities and challenges that have emerged in response to the use of digital resources and methodologies Chapters cover a wide range of technical and conceptual themes that define the current state of the field and outline strategies for future development This book offers a timely perspective on trans disciplinary developments that are reshaping art historical research conservation and teaching This book will be of interest to scholars in art history historical theory method and historiography and research methods in education **Services Computing for Language Resources** Yohei Murakami,Donghui Lin,Toru Ishida,2018-02-23

Describing the technologies to combine language resources flexibly as web services this book provides valuable case studies for those who work in services computing language resources human computer interaction HCI computer supported cooperative work CSCW and service science The authors have been operating the Language Grid which wraps existing language resources as atomic language services and enables users to compose new services by combining them From architecture level to service composition level the book explains how to resolve infrastructural and operational difficulties in sharing and combining language resources including interoperability of language service infrastructures various types of language service policies human services and service failures The research based on the authors operating experiences of handling complicated issues such as intellectual property and interoperability of language resources contributes to exploitation of language resources as a service On the other hand both the analysis based on using services and the design of new services can bring significant results A new style of multilingual communication supported by language services is worthy of analysis in HCI CSCW and the design process of language services is the focus of valuable case studies in service science By using language resources in different ways based on the Language Grid many activities are highly regarded by diverse communities This book consists of four parts 1 two types of language service platforms to interconnect language services across service grids 2 various language service composition technologies that improve the reusability efficiency and accuracy of composite services 3 research work and activities in creating language resources and services and 4 various applications and tools for understanding and designing language services that well support intercultural collaboration

Formal Ontology in Information Systems Nathalie Aussenac-Gilles, Torsten Hahmann, Antony Galton, 2024-01-15 FOIS is the flagship conference of the International Association for Ontology and its Applications a non profit organization which promotes interdisciplinary research and international collaboration at the intersection of philosophical ontology linguistics logic cognitive science and computer science This book presents the papers delivered at FOIS 2023 the 13th edition of the Formal Ontology in Information Systems conference The event was held as a sequentially hybrid event face to face in Sherbrooke Canada from 17 to 20 July 2023 and online from 18 to 20 September 2023 In total 62 articles from 19 different countries were submitted out of which 25 were accepted for inclusion in the conference and for publication corresponding to an acceptance rate of 40 percent The contributions are separated into the book's three sections 1 Foundational ontological issues 2 Methodological issues around the development alignment verification and use of ontologies and 3 Domain ontologies and ontology based applications In these sections ontological aspects from a wide variety of fields are covered primarily from various engineering domains including cybersecurity manufacturing petroleum engineering and robotics but also extending to the humanities social sciences medicine and dentistry A noticeable trend among the contributions in this edition of the conference is the recognition that improving the tools to analyze align and improve ontologies is of paramount importance in continuing to advance the field of formal ontology The book will be of interest to all formal and applied ontology researchers and to those who use formal ontologies and information systems as part of their work

Context in Communication: A Cognitive View Gabriella Airenti, Marco Cruciani, Alessio Plebe, 2017-04-03 Context is what contributes to interpret a communicative act beyond the spoken words It provides information essential to clarify the intentions of a speaker and thus to identify the actual meaning of an utterance A large amount of research in Pragmatics has shown how wide ranging and multifaceted this concept can be Context spans from the preceding words in a conversation to the general knowledge that the interlocutors supposedly share from the perceived environment to features and traits that the participants in a dialogue attribute to each other This last category is also very broad since it includes mental and emotional states together with culturally constructed knowledge such as the reciprocal identification of social roles and positions The assumption of a cognitive point of view brings to the foreground a number of new questions regarding how information about the context is organized in the mind and how this kind of knowledge is used in specific communicative situations A related very important question concerns the role played in this process by theory of mind abilities ToM both in typical and atypical populations In this Research Topic we bring together articles that address different aspects of context analysis from theoretical and empirical perspectives integrating knowledge and methods derived from Philosophy of language Linguistics Cognitive Science Cognitive Neuroscience Developmental and Clinical Psychology

Language, Data, and Knowledge Jorge Gracia, Francis Bond, John P. McCrae, Paul Buitelaar, Christian Chiarcos, Sebastian Hellmann, 2017-06-08 This book constitutes the proceedings of the First International Conference on Language Data and Knowledge LDK 2017 held in Galway Ireland in

June 2017 The 14 full papers and 19 short papers included in this volume were carefully reviewed and selected from 68 initial submissions They deal with language data knowledge graphs applications in NLP and use cases in digital humanities social sciences and BioNLP On The Move to Meaningful Internet Systems 2003: OTM 2003 Workshops R. Meersman,Zahir Tari,2003-10-30 This book constitutes the joint refereed proceedings of six international workshops held as part of OTM 2003 in Catania Sicily Italy in November 2003 The 80 revised full workshop papers presented together with various abstracts and summaries were carefully reviewed and selected from a total of 170 submissions In accordance with the workshops the papers are organized in topical main sections on industrial issues human computer interface for the semantic Web and Web applications Java technologies for real time and embedded systems regulatory ontologies and the modelling of complaint regulations metadata for security and reliable and secure middleware *On The Move to Meaningful Internet Systems 2003: OTM 2003 Workshops* Zahir Tari,2003-10-25 missions in fact also treat an envisaged mutual impact among them As for the 2002 edition in Irvine the organizers wanted to stimulate this cross pollination with a program of shared famous keynote speakers this year we got Sycara ble Soley and Mylopoulos and encouraged multiple attendance by providing authors with free access to another conference or workshop of their choice We received an even larger number of submissions than last year for the three conferences 360 in total and the workshops 170 in total Not only can we therefore again claim a measurable success in attracting a representative volume of scientific papers but such a harvest allowed the program committees of course to compose a high quality cross section of worldwide research in the areas covered In spite of the increased number of submissions the Program Chairs of the three main conferences decided to accept only approximately the same number of papers for presentation and publication as in 2002 i e around 1 paper out of every 4 5 submitted For the workshops the acceptance rate was about 1 in 2 Also for this reason we decided to separate the proceedings into two volumes with their own titles and we are grateful to Springer Verlag for their collaboration in producing these two books The reviewing process by the respective program committees was very professional and each paper in the main conferences was reviewed by at least three referees Computer Applications and Quantitative Methods in Archaeology ,2003 **Web Technologies** Arthur Tatnall,2009-10-31 With the technological advancement of mobile devices social networking and electronic services Web technologies continues to play an ever growing part of the global way of life incorporated into cultural economical and organizational levels Web Technologies Concepts Methodologies Tools and Applications 4 Volume provides a comprehensive depiction of current and future trends in support of the evolution of Web information systems Web applications and the Internet Through coverage of the latest models concepts and architectures this multiple volume reference supplies audiences with an authoritative source of information and direction for the further development of the Internet and Web based phenomena *On the Move to Meaningful Internet Systems ...: OTM ...
