Toxins And Hemostasis From Bench To Bedside:

Toxins and Hemostasis R. Manjunatha Kini, Kenneth J Clemetson, Francis S. Markland, Mary Ann McLane, Takashi Morita, 2010-10-19 Circulation of blood is vital for the survival of vertebrates including man. Mainly it plays an important role in carrying food nutrients and oxygen to every tissue and organ and in removing all waste products and carbon dioxide. Any imbalance in the hemostatic and cardiovascular systems can lead to death and severe debility. A number of animals have developed mechanisms to target these systems and exploit the vulnerability. In some species, for example snakes, such mechanisms are used to immobilize and kill the victim prey, whereas in others, for example insects such as leeches, mosquitoes, and ticks, they are used to provide a continuous supply of blood. These mechanisms include but are not limited to procoagulant and anticoagulant actions that affect the coagulation cascade and platelet aggregation as well as altering vasodilatory responses. In all these various animals, these mechanisms have evolved to perfection over millions of years to support their survival. In last 3-4 decades, due to the efforts of scientists from various backgrounds including biology, protein chemistry, molecular biology, pharmacology, hematology, and structural biology, significant progress in understanding the structure-function relationships as well as the mechanism of action have been made in a number of exogenous factors that affect blood coagulation, platelet aggregation, and vasodilation from various animals. These exogenous factors have contributed significantly to the development of research tools as well as providing new therapeutic agents. With the increase in average age of the population coupled with changes in life style in recent years, there has been a significant increase in cardiovascular and hematological disorders. Thus, scientists in both academic institutions as well as the pharmaceutical industry are developing better therapeutic agents to improve the quality of life. This impetus has led to the search for novel agents from various sources that interfere with cardiovascular and hematological processes. Although at first glance, exogenous factors appear to function as villains, several life-saving drugs have been developed based upon these factors. Such drugs or drug leads include those that inhibit the angiotensin converting enzymes, Captopril and Enalapril that block platelet receptors, Eptifibatide and Tirofiban, or that digest thrombotic plugs, Alvimoprase and bat plasminogen activator, to name a few. Several new and exciting success stories are currently unfolding. In this book, recent studies on some of the exogenous factors that play crucial roles in cardiovascular and hematological disorders are reviewed in order to consolidate the efforts in this area of research and to recruit new talented researchers. The 25-30 review chapters, each written by experts in their field, compiled herein are devoted to exogenous factors affecting platelet aggregation, anticoagulant and procoagulant proteins, fibrinolytic proteins, and hypotensive agents. For details, see Contents of the Book. This book is intended to help to create elevated awareness and enthusiasm in the field of exogenous factors. I believe that this book will provide greater impetus to the search for novel proteins based on naturally occurring exogenous factors. This will be the first book dealing extensively with exogenous factors in the last 25 years. The book will provide a ready reference to the different approaches used to solve

complex problems in protein chemistry and pharmacology of exogenous factors The book will update our understanding of the structure function relationships and mechanisms of action of exogenous factors and provide great insights into future directions for solving the remaining challenges

Transfusion Medicine and Hemostasis Beth H. Shaz, Christopher D. Hillyer, Joseph (Yossi) Schwartz, Morayma Reyes Gil, 2024-11-16 Transfusion Medicine and Hemostasis Fourth Edition continues to be the only pocket size quick reference for pathology and transfusion medicine for residents and fellows It s helpful to all physicians and allied health professionals who order and administer blood components cellular therapies and specialized factors for hemostatic abnormalities who order coagulation testing and those who consult and care for these often very ill patients The book is ideal for pathology medicine surgery and anesthesia residents transfusion hematology and anesthesia fellows and certified and specialized practitioners as well as medical technologist in transfusion cellular therapy hematology and coagulation The new edition covers the many new developments that have occurred since the previous edition to include new blood products new indications or clinical conditions in which blood products are used Similarly new hemostasis testing is introduced as well as new clinical scenarios due the COVID 19 pandemic relevant to Hemostasis Transfusion Medicine This includes COVID coagulopathy Vaccine Induced Thrombotic Immune Thrombocytopenia Pediatric reference range in coagulation testing Platelet rich plasma and MNC products CAR T cells Includes COVID 19 coagulopathy and Vaccine Induced Thrombotic Immune N94 Thrombocytopenia Provides all information regarding the clinical and laboratory aspects of Transfusion Medicine and Hemostasis in one place Presents user friendly up to date information in a book that can be carried around either to the lab or bedside

Handbook of Venoms and Toxins of Reptiles Stephen P. Mackessy, 2021-05-24 A decade after publication of the first edition Handbook of Venoms and Toxins of Reptiles responds to extensive changes in the field of toxinology to endure as the most comprehensive review of reptile venoms on the market The six sections of this new edition which has nearly doubled in size complement the original handbook by presenting current information from many of the leading researchers and physicians in toxinology with topics ranging from functional morphology evolution and ecology to crystallography omics technologies drug discovery and more With the recent recognition by the World Health Organization of snakebite as a neglected tropical disease the section on snakebite has been expanded and includes several chapters dealing with the problem broadly and with new technologies and the promises these new approaches may hold to counter the deleterious effects of envenomation This greatly expanded handbook offers a unique resource for biologists biochemists toxicologists physicians clinicians and epidemiologists as well as informed laypersons interested in the biology of venomous reptiles the biochemistry and molecular biology of venoms and the effects and treatment of human envenomation

Physiology of Hemostasis Derek. Ogston, 2012-12-06 The current widespread interest in the hemostatic mechanism stems largely from the probability that its inappropriate function may lead to thrombosis but also for its relevance to the causation and management of bleeding disorders Our understanding of the pathological events leading to thrombus formation or abnormal bleeding depends on knowledge of the basic physiology of the hemostatic system A number of excellent multi-author texts are available on the general area of hemostasis and thrombosis and many symposia proceedings on specific topics in hemostasis have been published The present volume aims to cover the normal function of hemostasis and explicitly excludes consideration of disease states and therapy In addition it is concerned with human hemostasis only although reference is made to studies on other mammalian species when the information supplements that available on man The book is divided broadly into two sections The first covers the current knowledge of the principal components contributing to the hemostatic process the second examines the changes in these components induced by physiological events and details an accumulation of information not previously brought together in a single text An introductory chapter intended for the non-specialist outlines the whole hemostatic process and provides an orientation for the later detailed information on individual components
