Okun, James J. Giordano, Adolfo Ramirez-Zamora, Joshua K. Wong, 2023-02-02 *Conserving Humanity at the Dawn of Posthuman Technology* Joseph R. Carvalko Jr., 2019-11-30 This volume examines the latest scientific and technological developments likely to shape our post human future Using a multidisciplinary approach the author argues that we stand at the precipice of an evolutionary change caused by genetic engineering and anatomically embedded digital and informational technologies The author delves into current scientific initiatives that will lead to the emergence of super smart individuals with unique creative capacities He draws on technology psychology and philosophy to consider humans as they are relative to autonomy creativity and their place in a future shared with post humans The author discusses the current state of bioethics and technology law both which policymakers beset by a torrent of revolutionary advances in bioengineering are attempting to steer Significantly Carvalko addresses why we must both preserve the narratives that brought us to this moment and continue to express our humanity through music art and literature to ensure that as a uniquely creative species we don't simply vanish in the ether of an evolution brought about by our own technology *Nanoscale* Nigel Cameron, M. Ellen Mitchell, 2007-08-13 An authoritative examination of the present and potential impact of nanoscale science and technology on modern life Because truly transformative technologies have far reaching consequences they always generate controversy Establishing an effective process for identifying and understanding the broad implications of nanotechnology will advance its acceptance and success impact the decisions of policymakers and regulatory agencies and facilitate the development of judicious policy approaches to new technology options *Nanoscale Issues and Perspectives for the Nano Century* addresses the emerging ethical legal

The Informed Brain in a Digital World National Academies Keck Future Initiative,2013-05-06 Digital media provide humans with more access to information than ever before a computer tablet or smartphone can all be used to access data online and users frequently have more than one device However as humans continue to venture into the digital frontier it remains to be known whether access to seemingly unlimited information is actually helping us learn and solve complex problems or ultimately creating more difficulty and confusion for individuals and societies by offering content overload that is not always meaningful Throughout history technology has changed the way humans interact with the world Improvements in tools language industrial machines and now digital information technology have shaped our minds and societies There has always been access to more information than humans can handle but the difference now lies in the ubiquity of the Internet and digital technology and the incredible speed with which anyone with a computer can access and participate in seemingly infinite information exchange Humans now live in a world where mobile digital technology is everywhere from the classroom and the doctor s office to public transportation and even the dinner table

This paradigm shift in technology comes with tremendous benefits and risks Interdisciplinary Research IDR Teams at the 2012 National Academies Keck Futures Initiative Conference on The Informed Brain in the Digital World explored common rewards and dangers to Humans among various fields that are being greatly impacted by the Internet and the rapid evolution of digital technology Keynote speaker Clifford Nass of Stanford University opened the dialogue by offering insight into what we already know about how the information overload of the digital world may be affecting our brains Nass presented the idea of the media budget which states that when a new media emerges it takes time away from other media in a daily time budget When additional media appear and there is no time left in a person's daily media budget people begin to double book media time Personal computers tablets and smartphones make it easy to use several media simultaneously and according to Nass this double booking of media can result in chronic multitasking which affects how people store and manage memory Although current fast paced work and learning environments often encourage multitasking research shows that such multitasking is inefficient decreases productivity and may hinder cognitive function National Academies Keck Future Initiative The Informed Brain in a Digital World summarizes the happenings of this conference

Artificial General Intelligence 2008 P. Wang, B. Goertzel, S. Franklin, 2008-02-18 The field of Artificial Intelligence AI was initially directly aimed at the construction of thinking machines that is computer systems with human like general intelligence But this task proved more difficult than expected As the years passed AI researchers gradually shifted focus to producing AI systems that intelligently approached specific tasks in relatively narrow domains In recent years however more and more AI researchers have recognized the necessity and the feasibility of returning to the original goal of the field Increasingly there is a call to focus less on highly specialized narrow AI problem solving systems and more on confronting the difficult issues involved in creating human level intelligence and ultimately general intelligence that goes beyond the human level in various ways Artificial General Intelligence AGI as this renewed focus has come to be called attempts to study and reproduce intelligence as a whole in a domain independent way Encouraged by the recent success of several smaller scale AGI related meetings and special tracks at conferences the initiative to organize the very first international conference on AGI was taken with the goal to give researchers in the field an opportunity to present relevant research results and to exchange ideas on topics of common interest In this collection you will find the conference papers full length papers short position statements and also the papers presented in the post conference workshop on the sociocultural ethical and futurological implications of AGI
