Towards Higher Categories The Ima Volumes In Mathematics And Its Applications:

Towards Higher Categories John C. Baez, J. Peter May, 2009-09-23 This IMA Volume in Mathematics and its Applications TOWARDS HIGHER CATEGORIES contains expository and research papers based on a highly successful IMA Summer Program on n Categories Foundations and Applications We are grateful to all the participants for making this occasion a very productive and stimulating one We would like to thank John C Baez Department of Mathematics University of California Riverside and J Peter May Department of Mathematics University of Chicago for their superb role as summer program organizers and editors of this volume We take this opportunity to thank the National Science Foundation for its support of the IMA Series Editors Fadil Santosa Director of the IMA Markus Keel Deputy Director of the IMA v PREFACE DEDICATED TO MAX KELLY JUNE 5 1930 TO JANUARY 26 2007 This is not a proceedings of the 2004 conference n Categories Foundations and Applications that we organized and ran at the IMA during the two weeks June 7 18 2004 We thank all the participants for helping make that a vibrant and inspiring occasion We also thank the IMA staff for a magnificent job There has been a great deal of work in higher category theory since then but we still feel that it is not yet time to offer a volume devoted to the main topic of the conference Elements of ∞ -Category Theory Emily Riehl, Dominic Verity, 2022-02-10 The language of categories provides an insightful new way of expressing many results in higher dimensional mathematics but can be challenging for the uninitiated To explain what exactly an category is requires various technical models raising the question of how they might be compared To overcome this a model independent approach is desired so that theorems proven with any model would apply to them all This text develops the theory of categories from first principles in a model independent fashion using the axiomatic framework of an cosmos the universe in which categories live as objects An cosmos is a fertile setting for the formal category theory of categories and in this way the foundational proofs in category theory closely resemble the classical foundations of ordinary category theory Equipped with exercises and appendices with background material this first introduction is meant for students and researchers who have a strong foundation in classical 1 category theory **New Spaces in Mathematics: Volume 1** Mathieu Anel, Gabriel Catren, 2021-04-01 After the development of manifolds and algebraic varieties in the previous century mathematicians and physicists have continued to advance concepts of space This book and its companion explore various new notions of space including both formal and conceptual points of view as presented by leading experts at the New Spaces in Mathematics and Physics workshop held at the Institut Henri Poincaré in 2015 The chapters in this volume cover a broad range of topics in mathematics including diffeologies synthetic differential geometry microlocal analysis topos theory infinity groupoids homotopy type theory category theoretic methods in geometry stacks derived geometry and noncommutative geometry It is addressed primarily to mathematicians and mathematical physicists but also to historians and philosophers of these disciplines *Mathematical Foundations of Quantum Field Theory and Perturbative String Theory* Hisham Sati, Urs

Schreiber,2011-12-07 Conceptual progress in fundamental theoretical physics is linked with the search for the suitable mathematical structures that model the physical systems Quantum field theory QFT has proven to be a rich source of ideas for mathematics for a long time However fundamental questions such as What is a QFT did not have satisfactory mathematical answers especially on spaces with arbitrary topology fundamental for the formulation of perturbative string theory This book contains a collection of papers highlighting the mathematical foundations of QFT and its relevance to perturbative string theory as well as the deep techniques that have been emerging in the last few years The papers are organized under three main chapters Foundations for Quantum Field Theory Quantization of Field Theories and Two Dimensional Quantum Field Theories An introduction written by the editors provides an overview of the main underlying themes that bind together the papers in the volume *Category Theory in Context* Emily Riehl,2017-03-09 Introduction to
