Contemporary Cities José-Miguel Fernández-Güell, 2024-11-14 Most contemporary cities are subject to growing levels of operational complexity and forecasting uncertainty a fact that inevitably increases the difficulties to plan and manage urban development under reasonable standards The issues of complexity and uncertainty in the urban domain have been studied since the 1960s but most academic contributions have been partial and discontinued through time Therefore this book pursues two major objectives 1 provide a historical review of the efforts made to understand the phenomena of complexity and uncertainty in both Basic Sciences and Urban Sciences and 2 display a conceptual model that helps to understand the application of systemic principles and foresight techniques in the urban realm While the historical overview constitutes an indispensable introduction to systems thinking the conceptual model facilitates collaborative planning with local stakeholders without losing the perspective of an integrated approach to cities This book will be appreciated by professors researchers and professionals in Urban Sciences Network Science In Education Catherine B. Cramer, Mason A. Porter, Hiroki

Sayama, Lori Sheetz, Stephen Miles Uzzo, 2018-10-22 Around the globe there is an increasingly urgent need to provide opportunities for learners to embrace complexity to develop the many skills and habits of mind that are relevant to today's complex and interconnected world and to make learning more connected to our rapidly changing workplace and society. This presents an opportunity to 1) leverage new paradigms for understanding the structure and function of teaching and learning communities and 2) to promote new approaches to developing methods, curricular materials and resources. Network science, the study of connectivity, can play an important role in these activities both as an important subject in teaching and learning and as a way to develop interconnected curricula. Since 2010, an international community of network science researchers and educators has come together to raise the global level of network literacy by applying ideas from network science to teaching and learning. Network Science in Education, which refers to both this community and to its activities, has evolved in response to the escalating activity in the field of network science and the need for people to be able to access the field through education channels. Network Science In Education: Transformational Approaches in Teaching and Learning appeals to both instructors and professionals while offering case studies from a wide variety of activities that have been developed around the globe, the creation of entirely new courses and degree programs, tools for K-20 learners, teachers and the general public, and in-depth analysis of selected programs. As network-based pedagogy and the community of practice continues to grow, we hope that the book's readers will join this vibrant network education community to build on these nascent ideas and help deepen the understanding of networks for all learners.

Design, User Experience, and Usability: Designing Interactions

Aaron Marcus, Wentao Wang, 2018-07-10 The three-volume set LNCS 10918, 10919 and 10290 constitutes the proceedings of the 7th International Conference on Design, User Experience and Usability (DUXU 2018) held as part of the 20th International Conference on Human-Computer Interaction (HCI 2018) in Las Vegas, NV, USA, in July 2018. Navigating Uncertainty Ian Scoones, 2024-07-24. Uncertainties are everywhere. Whether it's climate change, financial volatility, pandemic outbreaks, or new technologies, we don't know what the future will hold. For many contemporary challenges, navigating uncertainty where we cannot predict what may happen is essential, and as the book explores, this is much more than just managing risk. But how is this done, and what can we learn from different contexts about responding to and living with uncertainty? Indeed, what might it mean to live from uncertainty? Drawing on experiences from across the world, the chapters in this book explore finance and banking, technology, regulation, critical infrastructures, pandemics, natural disasters, and climate change. Each chapter contrasts an approach centred on risk and control, where we assume we know about and can manage the future, with one that is more flexible, responding to uncertainty. The book argues that we need to adjust our modernist, controlling view and to develop new approaches, including some reclaimed and adapted from previous times or different cultures. This requires a radical rethinking of policies, institutions, and practices for successfully navigating uncertainties in an increasingly turbulent world.
