Planning for Long-Term Use of Biomedical Data National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Research Data and Information, Division on Earth and Life Studies, Board on Life Sciences, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Applied and Theoretical Statistics, Board on Mathematical Sciences and Analytics, 2020-07-09 Biomedical research data sets are becoming larger and more complex and computing capabilities are expanding to enable transformative scientific results The National Institutes of Health's NIH's National Library of Medicine NLM has the unique role of ensuring that biomedical research data are findable accessible interoperable and reusable in an ethical manner Tools that forecast the costs of long term data preservation could be useful as the cost to curate and manage these data in meaningful ways continues to increase as could stewardship to assess and maintain data that have future value The National Academies of Sciences Engineering and Medicine convened a workshop on July 11-12 2019 to gather insight and information in order to develop and demonstrate a framework for forecasting long term costs for preserving archiving and accessing biomedical data Presenters and attendees discussed tools and practices that NLM could use to help researchers and funders better integrate risk management practices and considerations into data preservation archiving and accessing decisions methods to encourage NIH funded researchers to consider update and track lifetime data and burdens on the academic researchers and industry staff to implement these tools methods and practices This publication summarizes the presentations and discussion of the workshop

Interactive Knowledge Discovery and Data Mining in Biomedical Informatics Andreas Holzinger, Igor Jurisica, 2014-06-17 One of the grand challenges in our digital world are the large complex and often weakly structured data sets and massive amounts of unstructured information This big data challenge is most evident in biomedical informatics the trend towards precision medicine has resulted in an explosion in the amount of generated biomedical data sets Despite the fact that human experts are very good at pattern recognition in dimensions of 3 most of the data is high dimensional which makes manual analysis often impossible and neither the medical doctor nor the biomedical researcher can memorize all these facts A synergistic combination of methodologies and approaches of two fields offer ideal conditions towards unraveling these problems Human Computer Interaction HCI and Knowledge Discovery Data Mining KDD with the goal of supporting human capabilities with machine learning pp This state of the art survey is an output of the HCI KDD expert network and features 19 carefully selected and reviewed papers related to seven hot and promising research areas Area 1 Data Integration Data Pre processing and Data Mapping Area 2 Data Mining Algorithms Area 3 Graph based Data Mining Area 4 Entropy Based Data Mining Area 5 Topological Data Mining Area 6 Data Visualization and Area 7 Privacy Data Protection Safety and Security

Closing the Loops in Biomedical Informatics, 2009 **Information, Technology in Bio- and**

Medical Informatics, ITBAM 2010 Sami Khuri, Lenka Lhotská, Nadia Pisanti, 2010 Biomedical engineering and medical informatics are challenging and rapidly growing areas. Applications of information technology in these areas are of paramount importance. The aim of the first ITBAM conference was to bring together scientists, researchers and practitioners from different disciplines: mathematics, bioinformatics, biology, medicine, biomedical engineering and computer science, having such common interests. We hope that ITBAM conferences will provide opportunities for fruitful discussions between all attendees and provide a platform where participants can exchange their most recent results, identify future directions and challenges, initiate possible collaborative research and system development and develop common languages for solving problems in the realm of biomedical engineering, bioinformatics and medical informatics. The importance of computer-aided diagnosis and therapy has drawn more and more attention worldwide and laid the foundation for modern medicine with excellent potential for promising applications such as telemedicine, Web-based healthcare and analysis of genetic information. For this conference, after a peer review process, we finally selected 13 long papers and 8 short papers that are now published in this volume. They are divided into the following groups: workflow management and database decision support and data management in biomedicine; medical data modelling and information retrieval; data mining in bioinformatics; knowledge representation and data management in bioinformatics; biological data and signal processing. The papers show how broad the spectrum of topics in applications of information technology to biomedical engineering and medical informatics is.
