Sea At that time this was a real puzzle The skin depth of microwaves for sea water is only of the order of centimeters while the sea bottom is about 20 meters below the surface Electromagnetic radiation therefore cannot probe the bottom directly Similar phenomena were found in radar imagery from SEASAT and SIR A/B synthetic aperture radars SAR s of Nantucket Shoals the English Channel and many other coastal areas Since then theory and ocean field experiments Le Phelps Bank Georgia Straits SARSEX TOWARD FASINEX etc have advanced our understanding considerably We now know that these surface signatures are the results of surface currents perturbed by the bottom topography which refract the propagation and modulate the energy of short surface waves so as to cause microwave backscatter power variations Hence any large scale ocean features containing nonuniform surface currents i e internal waves eddies fronts etc will cause similar manifestations in the radar imagery by means of current wave microwave interactions Observations confirm this Academic Writing Stephen Bailey,2003 This work takes a refreshing approach to the academic writing course providing easily understandable language set within a clear structure *Resources in Education* ,2001
