Wave Dynamics Of Generalized Continua Advanced Structured Materials:

Wave Dynamics of Generalized Continua Alexander G. Bagdoev, Vladimir I. Erofeev, Ashot V. Shekoyan, 2015-09-25
This monograph is devoted to problems of propagation and stability of linear and nonlinear waves in continuous media with complex structure. It considers the different media such as solid with cavities, preliminarily deformed, disperse medium, solid with porosity, filled by the electrically conductive and non-conductive liquid, magnetoelastic, piezo, semiconductors, crystals with dislocations, composites with inclusions, an electrically conductive asymmetrical liquid, a mixture of gas with a drop liquid. The book also considers the propagation of a laser beam through a two-level medium. The presented results are based on methods of evolution and modulation equations that were developed by the authors. The book is intended for scientific and technical researchers, students and postgraduate students specializing in mechanics of continuous media, physical acoustics and physics of the solid state. **Sixty Shades of Generalized Continua** Holm Altenbach, Arkadi Berezovski, Francesco dell'Isola, Alexey Porubov, 2023-02-13
In this book, well-known scientists discuss modern aspects of generalized continua in order to better understand modern materials and advanced structures. They possess complicated internal structure and it requires the development of new approaches to model such structures and new effects caused by it. This book combines fundamental contributions in honor of Victor Eremeyev and his 60th birthday. **Nonlinear Wave Dynamics of Materials and Structures** Holm Altenbach, Victor A. Eremeyev, Igor S. Pavlov, Alexey V. Porubov, 2020-04-22
This book marks the 60th birthday of Prof. Vladimir Erofeev, a well-known specialist in the field of wave processes in solids, fluids, and structures. Featuring a collection of papers related to Prof. Erofeev's contributions in the field, it presents articles on the current problems concerning the theory of nonlinear wave processes in generalized continua and structures. It also discusses a number of applications as well as various discrete and continuous dynamic models of structures and media and problems of nonlinear acoustic diagnostics. ***Dynamics, Strength of Materials and Durability in Multiscale Mechanics*** Francesco dell'Isola, Leonid Igumnov, 2020-11-01
This book reviews the mathematical modeling and experimental study of systems involving two or more different length scales. The effects of phenomena occurring at the lower length scales on the behavior at higher scales are of intrinsic scientific interest but can also be very effectively used to determine the behavior at higher length scales or at the macro level. Efforts to exploit this micro and macro coupling are naturally being pursued with regard to every aspect of mechanical phenomena. This book focuses on the changes imposed on the dynamics, strength of materials, and durability of mechanical systems by related multiscale phenomena. In particular, it addresses: 1) the impacts of effective dissipation due to kinetic energy trapped at lower scales; 2) wave propagation in generalized continua; 3) nonlinear phenomena in metamaterials; 4) the formalization of more general models to describe the exotic behavior of meta-materials; 5) the design and study of microstructures aimed at increasing the toughness and durability of novel materials. **Dynamics of Discrete and Continuum Structures and Media** Holm Altenbach, Victor A. Eremeyev, 2025-07-19
